hitting his head; if the floor of the loft is completely planked; if there is no one under the lof
the area under the loft cannot be used as a dwelling (e.g., it is used solely for storage sp
the Commentary); if the bed or bench with detachable legs is on the ground; or if the legs
bench are securely fixed to their frame. Effort. There is a question as to whether //sitt
and //lying down// would include standing as well, since the no-offense clauses allow on
there and hang things up or take them down." The Commentary interprets "there" as a be
detachable legs, but standing on such a thing would seem to be even more dangerous t
lying down on it. More probably, "there" refers to the unplanked loft. Some people h
that although the bhikkhu in the origin story sat down hurriedly, the word "hurriedly" does
the rule, and they speculate that it may have been dropped by mistake. If one is not allo
to sit or lie down on a bed or bench with detachable legs on an unplanked loft, they say, th
be no reason to have one there. Actually, beds with detachable legs do not sound like wis
on an unplanked loft, and perhaps the Buddha's purpose in formulating this rule was to
their being placed there in the first place. Summary: Sitting or lying down on a bed or
detachable legs on an unplanked loft in a dwelling belonging to the Community is a
offense. * * * 19. When a bhikkhu is building
a large dwelling, he may apply two or three layers of facing to plaster the area arou
window frame and reinforce the area around the door frame the width of the door openi
standing where there are no crops to speak of. Should he apply more than that, ev
standing where there are no crops to speak of, it is to be confessed. "Now at that
chief minister who was Ven. Channa's supporter was having a dwelling built for Ven. Ch
Channa had the finished dwelling covered with roofing material again and again, plast
again, so that the dwelling, overloaded, caved in. Then Ven. Channa, collecting gra
sticks, despoiled the barley field of a certain brahmin. The brahmin was offended and a
spread it about, 'How can revered ones go around despoiling our barley field?'...Bhikl
offended and annoyed and spread it about, 'How can Ven. Channa have a finished
covered with roofing material again and again, plastered again and again, so that the dw
overloaded and caves in?'" This rule is an extension of Sanghadisesa 7, giving furthe
directions for how a bhikkhu should go about building a dwelling for his own use when spo
person. Since it deals with techniques used in building wattle and daub dwellings 2,500 y
both the rule and its explanations in the Canon and commentaries contain terms whose m
at present. The syntax of the rule suggests one interpretation, the Commentary another
Vibhanga is non-committal on the points where the two interpretations differ. Since both i
make sense, we will present them both here. What the rule seems to say. The area
around the door frame is to be covered with up to three layers of plaster or roofing mater
reinforce it so that when the door is blown open or shut it will not damage the wall or be lo
its hinges. Five kinds of roofing material are mentioned in the Vibhanga: tiles, stones, li
(cement), grass, and leaves. Similarly, around the windows, an area the width of the

shutters is to be reinforced with up to three layers of plaster to protect it from being damag
shutters are blown open or shut. Three kinds of plaster were used in the Buddha's time --
black and red-chalk -- and bhikkhus were allowed to apply them in a number of geometrica
not to use them to make obscene pictures of men and women on the walls (!) (Cv.VI.3.1
bhikkhus were allowed to cover the entire walls and floor with this plaster, this rule gives d
only for the minimum area that should be covered to keep the walls strong. What the
says. Because the rule refers to roofing material, the Commentary assumes that it must re
of the dwelling, even though this assumption does violence to the syntax of the rule. Its
interpretation: One may reinforce the door and window frames with as much plaster or roo
one likes, but may cover the roof with only three layers of roofing material. A relevant po
the Canon is the passage at Cv.VIII.3.3 stating that if at a later date the roof begins to leak
resident bhikkhu -- if he can -- should re-roof it himself or arrange for someone else to do i
If he can do neither, though, there is no offense. The reasons for this rule. The origin
suggests that the Buddha imposed the three-layer limit in order to prevent the dwelling fr
collapsing under the weight of too much roofing material, but the no-offense clauses show
rule is aimed at preventing bhikkhus from abusing the generosity of the person sponsorin
work by using too much roofing material. In either case, the Commentary's interpretation l
logic, in that an overloaded roof would be more burdensome to the dwelling and to the spo
overloaded window or door frame would be. A supplementary regulation arising fro
story is that one should not perform any building operations, including supervising, wher
growing. The offenses here are as follows: a pacittiya for each piece of roofing beyo
allowable three layers, and a dukkata for doing or directing the work while standing where
growing. These offenses apply regardless of whether one is doing the work oneself or h
They also apply whether one is building a new dwelling or having an old one repaired.
Perception is not a factor here. If one happens to miscount the number of layers of plaste
material, one is still not immune from an offense. Non-offenses. According to the Vib
these regulations do not apply to "an abode in a cave, a grass hut, (a dwelling) for the use
another, (a dwelling built) by means of one's own resources, or anything other than a dwel
Sub-commentary argues from the wording of the rule -- the fact that it refers to "a large dw
that the regulations also do not apply to small dwellings built to the standard measuremen
under Sanghadisesa 6: i.e., no larger than 3 by 1.75 meters. Summary: When a bh
building or repairing a large dwelling for his own use, using resources donated by a
may not reinforce the window or door frames with more than three layers of roofing mat
plaster. To exceed this is a pacittiya offense.

* * *

20. Should any bhikkhu knowingly pour water containing living beings -- or have
poured -- on grass or on clay, it is to be confessed. This is an offense with four facto
Object: water containing living creatures. The K/Commentary's contribution to the nex
shows that this includes things like mosquito larvae, but not beings so small they cannot b

Perception. One knows that the living creatures are there (from having seen or heard th
K/Commentary) and that they will die from the factor of effort, defined below. If one
doubt as to whether water contains living beings, then to use it in a way that would cause t
they //were// there is to commit a dukkata. Effort. Because of a peculiarity of Pali syn
this rule can also be interpreted as reading, "Should any bhikkhu knowingly pour grass o
have it poured -- in water containing living beings, it is to be confessed." The Commentary
both readings are correct. It also states that //grass and clay// includes any material that
cause death to living beings in the water. Thus actions covered by this rule would include
as emptying old water from a flower vase onto the ground, using water to make cement, o
chemical or heavy pollutant into the water. Unlike some of the other rules that deal w
giving orders, simply giving the order to pour is enough to fulfill this factor. Thus, for exa
bhikkhu who tells someone else to dump an aquarium of fish on the floor incurs a pacittiya
order and another pacittiya when the other person does as told. Intention. This fact
fulfilled simply by the desire to pour the water or to have it poured (or to pour "grass and cl
the water or to have it poured). As the K/Commentary notes, one need not have murder
towards the living beings in order to fulfill this factor. For example, if after perceiving that t
water contains insects, one chooses to ignore their existence and pours the water on a bu
to kill the insects, but to put out the fire -- one commits an offense all the same. Resu
not a factor here. Whether or not the living beings actually die is of no consequence in de
offense. Non-offenses. There is no offense in using water containing living beings in
the ways covered by this rule -- //unknowingly// -- e.g., not knowing that it contains livin
beings; pouring a toxic chemical into the water thinking it to be harmless; //unthinking
e.g., heating a kettle of water on the stove, seeing that it has tadpoles in it and in a knee
reaction dumping the water out on the ground so that they won't be boiled to death;
//unintentionally// -- e.g., accidentally knocking over a goldfish bowl. However, a bhi
should always check water before using it. One practical method for checking large amou
look at two or three cupfuls as samples: If no living being are visible in the samples, the
be used without further check. An alternative method is to use a filter, being mindful to ret
living beings caught in the filter to some other water in good time. Watering plants. Th
watering plants comes up in the Commentary's discussion of the bad habits of the bhikkhu
mentioned under Sanghadisesa 13. There it says that even if the water has no discernabl
or have someone else use it to water plants with the purpose of corrupting families with
the plant, entails a dukkata. In cases of this sort, one is not allowed to use //kappiya-voha
other way of indicating one's desire that the plant be watered. If one wants to use th
fruits or flowers of the plant in other ways -- to eat the fruit oneself, to make a gift of fruit to
Community, to use the flowers as an offering to a Buddha image, etc. -- one may not wa
but there is no offense in getting someone else to water it if one uses //kappiya- vohara// ("
how dry this plant is !" "If it doesn't get any water, it's going to die.") If one wants the

plant to grow for other reasons -- for the sake of its shade or as part of a decorative garde
-- there is no offense in watering it oneself as long as one uses water with no discernabl
it. Two of the ancient commentaries add that if one simply desires shade, a garden, or a f
plant the plant oneself as long as one places it in earth that would not count as "soil"
(//jata-pathavi//) under Pacittiya 10. Summary: Pouring water that one knows to contai
beings -- or having it poured -- on grass or clay is a pacittiya offense. Pouring anythi
would kill the beings into such water -- or having it poured -- is also a pacittiya offe

* * * * * * * *

CHAPTER EIGHT

Part Three: The Exhortation Chapter ~~~

full offense under this rule are defined as follows: 1) //Object//: a bhikkhuni or group of bhikkhunis. 2) //Effort//: A bhikkhu exhorts her/them concerning the eight vows of res he has not been properly authorized to do so, or when he has not been invited by the bl give them instruction. Object. A bhikkhuni had to undergo a double ordination, first the Bhikkhuni Sangha and then in the Bhikkhu Sangha, before she was considered fully o a bhikkhuni with the full double ordination is grounds for a pacittiya here. A bhikkhuni who received only her first ordination, from the Bhikkhuni Sangha, is grounds for a dukkata, wh probationers and female novices are not grounds for an offense. Effort. A bhikkhu, r properly authorized, who exhorts the bhikkhunis on any topic other than the eight vows inc The authorization. When this rule was still newly-formulated, some group-of-six bhikl authorized one another to continue exhorting the bhikkhunis. This forced the Buddha to e stringent standards for the type of bhikkhu who could properly be authorized. They were, He is scrupulously virtuous. He is very learned. He thoroughly understands the qualiti celibate life. He has mastered both the bhikkhus' Patimokkha and the bhikkhunis' Pat He has a pleasing voice and delivery. He is well-liked by the bhikkhunis. He never, befo ordination, violated a bhikkhuni, female probationer, or female novice. He has been a at least 20 years. As the Commentary notes, these are qualities that the group of six possessed even in their dreams. If a bhikkhu has been improperly authorized -- e.g., h meet with these qualifications -- then even if he perceives himself as properly authorized, perception is not a mitigating factor: He does not count as authorized under this rule. Non-offenses. Although this rule grew from a time when bhikkhus were eager to exhort th times changed. The Cullavagga (X.9.5) deals with a period when the bhikkhus tried to avo the bhikkhunis, and Cv.X.9.4 tells what should be done when there is no bhikkhu qualified (The bhikkhus were to tell them, "Continue striving in good faith.") In cases such as t though, the bhikkhunis were not left adrift. They could approach any bhikkhu they admire for instruction. Thus the no-offense clauses here say, "There is no offense in giving an ex Commentary interprets this as chanting the eight vows in Pali), giving an interrogation (this according to the Commentary, means reciting the ancient commentary, which is hardly like it means questioning the bhikkhunis as to whether or not they are observing the eight vow after being requested by the bhikkhunis, giving instruction. There is also no offense if, on a question by a bhikkhuni, one answers her question, or if a bhikkhuni happens to overh instruction one is giving for the sake of another person. Summary: Exhorting a bhik about the eight vows of respect -- except when one has been authorized to do so by Community -- is a pacittiya offense. * * * 22. Should any bhikkhu, even if authorized, exhort the bhikkhunis after sunset, it is to be co "Now at that time it was Ven. Culapanthaka's turn to exhort the bhikkhunis. The bh said, 'Today the exhortation won't be effective, for Ven. Culapanthaka will simply repeat same old stanza over and over again.' "Then the bhikkhunis approached Ven.

Culapanthaka and, on arrival, having paid homage to him, sat down to one side. A sitting there, Ven. Culapanthaka said to them, 'Are you all present, sisters?' "'Yes, sir, we are all present.' "'Are the eight vows of respect being observed?' "'Yes, sir, they are being observed.' "'This, sisters, is the exhortation.' And having given it to them, repeated it over and over again: Exalted in mind, uncomplacent, The sag trained in sagacity's ways: He has no sorrows, one such as this, Calmed and mindful. "The bhikkhunis said, 'Didn't we say so? Today the exhortation won't b effective, for now Ven. Culapanthaka will simply repeat the same old stanza over and o "Ven. Culapanthaka heard the bhikkhunis' conversation. Rising up into the air, he back and forth in space, in the sky, stood, sat, lay down, emitted smoke, emitted fla disappeared, repeating the same old stanza and many other sayings of the Buddha. Th 'Isn't it amazing? Isn't it astounding? Never before has there been an exhortation a effective as this!' "Then Ven. Culapanthaka, having exhorted the bhikkhunis unt nightfall, dismissed them: 'You may go, sisters.' So the bhikkhunis -- the gates of the c closed -- spent the night outside the city walls and entered the city only at morning. were offended and annoyed and spread it about, 'These bhikkhunis are unchaste. Havi the night with the bhikkhus in the monastery, only now are they entering the city.'" Th factors for the full offense here are two: Object. As with the preceding rule, a bhikkhuni of bhikkhunis who have received the double ordination are grounds for a pacittiya here. who has received only her first ordination, from the Bhikkhuni Sangha, is grounds for a du female probationers and female novices are not grounds for an offense. Effort. One bhikkhuni(s) any topic related to the Dhamma after the sun has set. Non-offenses. A origin story suggests that it is not wise in any case to teach bhikkhunis after sunset -- beca suspicions such an action may provoke -- the no-offense clauses give more respect to th desire for instruction than to the fear of gossiping lay people. As under the preceding rule bhikkhu may instruct bhikkhunis after sunset if they request it or if a bhikkhuni asks him a And as before, if a bhikkhuni happens to overhear any instruction he is giving for the sake person after sunset, no offense is entailed. Summary: Exhorting bhikkhunis on any to after sunset -- except when they request it -- is a pacittiya offense.

* * * 23. Should any bhikkhu, having gone to the bhikkhunis' quarters, exhort the bhikkhunis -- except at the proper occasion -- it is to be confessed. Here the occasion is this: A bhikkhuni is ill. This is the proper occasion here. Here again there are two factors for the full offense: Object. A bhikkhuni who is not ill. //Ill// means she is unable to go to an exhortation or to a "samvasa," which none of the texts define b probably means any official communal meeting of the bhikkhunis. As with the prece bhikkhuni or group of bhikkhunis who have received the double ordination are grounds for here. A bhikkhuni who has received only her first ordination, from the Bhikkhuni Sangha,

dukkata, while female probationers and female novices are not grounds for an offense. One goes to her residence -- any place where a bhikkhuni has spent at least one night -- a concerning the eight vows of respect. Exhorting about any other topic is grounds for a d Non-offenses. As the rule states, there is no offense for the bhikkhu who goes to the b quarters to exhort an ill bhikkhuni. Otherwise, the no-offense clauses are identical with t the preceding rule. Here again, a bhikkhuni's desire for instruction is considered more imp the wagging tongues of the laity. Summary: Going to the bhikkhunis' quarters and ex bhikkhuni about the eight vows of respect -- except when she is ill or has requested instruction -- is a pacittiya offense.

* * *

24. Should any bhikkhu say that the bhikkhus exhort the bhikkhunis for the sake of gain, it is to be confessed. Here the factors for the full offense are three: Object: a bhikkhu who has been properly authorized to teach the bhikkhunis and who is not teachi personal gain. If the bhikkhu has not been properly authorized, he is not grounds for an Perception is not a mitigating factor here: The bhikkhu's actual status -- properly or improperly authorized -- is what determines whether or not this factor is fulfilled. And altho texts do not touch on this point, it would seem that if the bhikkhu actually does not aim a gain, one would incur a pacittiya in saying that he does, regardless of how one perceives t Intention. One wants to criticize, discredit, or shame him. Effort. One accuses him teaching for the sake of personal gain: either material gain -- gifts of robes, almsfood, etc. immaterial gain, such as respect, homage, or veneration. Non-offenses. If the bhikkhu actually teach for the sake of personal gain, there is no offense in stating the facts of the c Summary: Saying that a properly authorized bhikkhu exhorts the bhikkhunis for the personal gain -- when in fact that is not the case -- is a pacittiya offense.

* * *

25. Should any bhikkhu give robe-cloth to a bhikkhuni unrelated to him, except in exchange, it is to be confessed. This rule is the counterpart to full offense is composed of two factors: object and effort. Object: any piece of robe-c the six suitable kinds, measuring at least four by eight fingerbreadths. Other requisites a grounds for an offense. Effort. The bhikkhu gives the cloth to an unrelated bhikkhuni a not receive anything from her in exchange. //Unrelated bhikkhuni// here is defined in th terms as under NP 5: a bhikkhuni who has received the double ordination and is not rel bhikkhu back through their great x 7 grandfathers. A bhikkhuni who has received only her ordination, from the bhikkhunis, is grounds for a dukkata. Female probationers and fema not grounds for an offense. Perception is not a mitigating factor here: According to th Vibhanga, even if a bhikkhu perceives an unrelated bhikkhuni as related, he is still subject penalty. The Commentary states that the giving need not be hand-to-hand. If a bhi places the cloth near a bhikkhuni as his way of giving it to her, and she accepts it as given is fulfilled. As for the item given in exchange for the cloth, the Vibhanga states that can be worth much more then the cloth or much less. Buddhaghosa quotes the Mahapac

ancient commentaries, as saying that even if, in return for the cloth, the bhikkhuni gives a piece of yellow myrobalan -- a medicinal fruit, one of the cheapest things imaginable in I escapes the penalty under this rule. Non-offenses. There is no offense if: the bhikkhuni is a relation; the bhikkhuni is not related, but she gives one something in ex the bhikkhuni takes the cloth on trust; she borrows the cloth; one gives her a non-clot requisite; one gives robe-cloth to a female probationer or female novice. Summary: robe-cloth to an unrelated bhikkhuni without receiving anything in exchange is a pacittiy offense. * * * 26. Should any bhikkhu sew a robe or have it sewn for a bhikkhuni unrelated to him, it is to be confessed. "N at that time Ven. Udayin had become skilled at making robes. A certain bhikkhuni went staying and on arrival said, 'Be so good, Ven. sir, as to sew me a robe.' So Ven. U having sewed a robe for the bhikkhuni, having made it well-dyed and well-finished, embroidered an obscene design in the middle (a man and woman in mid-intercourse, d says the Commentary), and having folded it up, placed it to one side. Then the bhi to him and on arrival said, 'Where is the robe, Ven. sir?' "'Here you are, sister. Ta this robe as it is folded and place it aside. When the Community of bhikkhunis comes f exhortation, put it on and come at the back of the line.' "So the bhikkhuni took the ro was folded and placed it aside. When the Community of bhikkhunis came for exho put it on and came at the back of the line. People were offended and annoyed and spre 'How brazen these bhikkhunis are, how shameless and sly, in that they embroider d designs on a robe!' "The bhikkhunis said, 'Whose work is this?' "'Master Udayin's,' the bhikkhuni answered. "'A thing like this should not adorn even those w brazen, shameless, and sly. It is Master Udayin's, isn't it?'" The full offense here has three factors: 1) //Effort//: One sews -- or gets someone else to sew -- 2) //Object//: a robe 3) //Intention//: for the sake of a bhikkhuni unrelated to oneself. Effort. The Vibhanga says that there is a pacittiya for every stitch one makes in the robe. someone else to sew the robe, there is a pacittiya in giving the command or making the another pacittiya when the other person does as commanded/requested, no matter how m makes. Object. //Robe// here means any of the six kinds of robe-cloth made into a r can be worn. Other cloth requisites are not grounds for an offense. Intention. //Unre bhikkhuni// here is defined in the same terms as under the preceding rule: a bhikkhuni wh the double ordination and is not related to the bhikkhu back through their great x 7 grand bhikkhuni who has received only her first ordination, from the bhikkhunis, is grounds for a Female probationers and female novices are not grounds for an offense. Perceptio mitigating factor here: According to the Vibhanga, even if a bhikkhu perceives an unrelate related, he is still subject to the penalty. The Commentary states that if Bhikkhu X is sewing a robe for a bhikkhuni related to him, and Bhikkhu Y -- who is not related to her - sew it, Bhikkhu Y incurs a pacittiya for every stitch he sews in the robe. The Sub-commen

though, that if Bhikkhu Y does not know that the robe is for the bhikkhuni, he is exempt f
offense. Non-offenses. There is no offense in sewing a cloth requisite other than a r
an unrelated bhikkhuni, in sewing anything for a bhikkhuni who is a relation, or in sewing a
female probationer or female novice, related or not. Summary: Sewing a robe -- or h
sewn -- for an unrelated bhikkhuni is a pacittiya offense.

* * * 27. Should any bhikkhu, by arrangement, travel together with a bhikkhun
even for the interval between one village and the next, except at the proper occasion, it
confessed. Here the proper occasion is this: The road is to be traveled by caravan
considered dubious and risky. This is the proper occasion here. Here the full offense
factors. 1) //Object//: a bhikkhuni 2) //Effort//: (a) One makes an arrangement togeth
her to travel together; (b) one actually travels together with her as arranged (c) from
village to another (d) except at the allowable time. Object. A bhikkhuni who has rec
the double ordination is grounds for a pacittiya here. Any other woman would come under
67. Making an arrangement. According to the Vibhanga, the bhikkhu must give his v
to the arrangement for this part of the factor to be fulfilled. In other words, if the bhikkhuni
the arrangement, and he agrees; or he proposes it, regardless of whether or not she agr
of the factor is fulfilled. The penalty for fulfilling it is a dukkata. If the bhikkhuni
proposes the arrangement but the bhikkhu does not give his verbal assent, then even if he
together as she proposed, he incurs no penalty in doing so. Going as arranged. If a
time frame was part of the arrangement, then the two parties must begin traveling togethe
time frame for this factor to be fulfilled. If they happen to start out earlier or later than arra
again the bhikkhu incurs no penalty. From one village to another. There is some con
to whether this phrase -- //gamantara// -- means "from one village to another" or "from on
another." According to Buddhaghosa, the ancient commentaries opted for "village," while
"house." The ancient commentaries have the support of the Canon here, in that the Bhikk
Sanghadisesa 3 & Pacittiya 37 also use the term in question, and there it definitely means
outside a village, and not the interval from one house to another within a village. Th
is a pacittiya for every village-to-village interval one passes. In an area where there are no
-- i.e., says the Sub-commentary, where villages are further than half a league (8 km. or
apart -- there is a pacittiya for every half-league one travels together as arranged. Th
allowable occasions. A road to be traveled by caravan (%) is one too dubious or risky to tr
(Some have translated this as a "road to be traveled with a weapon," but since bhikkhus
are not allowed even to touch weapons, it's a doubtful translation at best.) //Dubious/
that thieves are known to be about; //risky//, that people are known to have been beaten, p
robbed by them. Non-offenses. There is no offense: if the bhikkhu and bhikkhu
happen to travel together without having made an arrangement; if the bhikkhuni prop
arrangement, while the bhikkhu does not give his verbal assent; if they travel on a du
risky road; or if there are other dangers. The Commentary illustrates this last conting

a stock phrase whose meaning admits two interpretations. It starts, "Savage tribes are countryside," and then comes the ambiguous part, either, "People mount their whee carriages, says the Sub-commentary)," or, what is more likely, "The tribes seize power (meaning for 'wheel')." Summary: Traveling by arrangement with a bhikkhuni from village to another -- except when the road is risky or there are other dangers -- is a paci offense. * * * 28. Should any bhikkhu, by arrangement, get in the same boat with a bhikkhuni going upstream or downstream -- e cross over to the other bank -- it is to be confessed. "Now at that time, some group- bhikkhus, having made an arrangement with some bhikkhunis, got in the same boat People were offended and annoyed and spread it about: 'Just as we amuse ourselves boat, so too these Sakyan contemplatives, having made an arrangement with bhikk themselves in a boat....'" (The Buddha then formulated the first version of this rule without the exception for crossing over to the other bank.) "Then at that time a nur bhikkhus and bhikkhunis were traveling on the road from Saketa to Savatthi. Along the they had to cross over a river. The bhikkhunis said to the bhikkhus, 'We'll cross over wi masters.' "'Sisters, it isn't proper for bhikkhus, having made an arrangement, to in the same boat with bhikkhunis. Either you go first or we'll go first.' "'The masters are outstanding men. Let the masters go first.' "Then as the bhikkhuni crossing over afterward, thieves robbed them and raped them." The factors for the fu here are similar to those for the previous rule. 1) //Object//: a bhikkhuni. 2) //Effort//: (a) One makes an arrangement together with her to get in a boat together; (b) on travels together with her as arranged, going upstream or downstream along a river (c) fron to another. Object. A bhikkhuni who has received the double ordination is grounds f pacittiya here. One who has received only her first ordination -- from the Bhikkhuni Sangh to be grounds for a dukkata, and female probationers and female novices grounds for no none of the texts mention these points. Effort. The conditions for making an arrangem identical with those under the preceding rule: If the bhikkhuni proposes the arrangemen bhikkhu agrees; or he bhikkhu proposes it, regardless of whether or not she agrees, this p factor is fulfilled and he incurs a dukkata. The next part of the factor -- going as arrang fulfilled only if they get in the boat together within the time frame they had agreed on. If in earlier or later, there is no offense. Once they get in the boat as arranged, he incurs pacittiya for every village-to-village interval they pass along the riverbank while going up downstream. If the villages are further than 8 km. apart, he incurs a pacittiya for every 8 k travel together. The commentaries try to add "intention" as an additional factor here the bhikkhu's purpose in traveling with the bhikkhuni(s) is to amuse himself -- but there is n this in the Vibhanga. Non-offenses. As the rule says, there is no offense in making an arrangement and crossing over a river with a bhikkhuni. The Commentary adds that this a rivers but also to oceans: If one travels from one seaport to another by arrangement wit

bhikkhuni, no penalty is entailed. The K/Commentary goes even further and says tha applies only to rivers, and that a bhikkhu seeking to amuse himself with a bhikkhuni may with her and travel around the ocean as much as he likes with no offense. The Sub-comm here, saying that a bhikkhu traveling by arrangement with a bhikkhuni in a boat on the oce dukkata for every 8 km. they travel. The Sub-commentary's position here is more in keepi Great Standards and so carries more weight. Finally, there is no offense if: the bhi and bhikkhuni happen to travel together in the same boat without having made an arran bhikkhuni proposes an arrangement, while the bhikkhu does not give his verbal assent; are dangers. Summary: Traveling by arrangement with a bhikkhuni upriver or do the same boat -- except when crossing a river -- is a pacittiya offense.

* * * 29. Should any bhikkhu knowingly eat almsfood donated throug the prompting of a bhikkhuni, except for food that householders had already intended fo her prompting), it is to be confessed. "Now at that time Bhikkhuni Thullananda reg took her meals with a certain family. Then one day the head of the household invite senior monks to a meal. Bhikkhuni Thullananda, dressing in the early morning, carrying robe and bowl, went to the family's place and on arrival said to the head of the househo so much food been prepared?' "'I have invited some senior bhikkhus for a meal "'But who, to you, are senior bhikkhus?' "'Ven. Sariputta, Ven. Maha Moggallana Maha Kaccana, Ven. Maha Kotthita, Ven. Maha Kappina, Ven. Maha Cunda, Ven. Revata, Ven. Upali, Ven. Ananda, Ven. Rahula.' "'But why have you invited thes scoundrels masquerading as great heroes?' "'And who, to //you//, are great her "'Ven. Devadatta, Ven. Kokakalika, Ven. Katamoraka Tissaka, Ven. Khanda Devi Samuddadatta....' At that point, Bhikkhuni Thullananda was interrupted in mid-sentence the senior monks entered. 'Is it true, householder, that you have invited these great her "'Just now you made them out to be scoundrels, and now great heroes.' So he threw the house and put an end to her regular meals." The factors for the full offense he three: 1) //Object//: any of the five staple foods (see the preface to the Food Chapt below) offered by a lay person at the instigation of a bhikkhuni. 2) //Perception//: Or that it was offered at her instigation. 3) //Effort//: One eats the food. Object. Any of the five staple foods is grounds for a pacittiya. Any edible aside from them is not groun offense. //Bhikkhuni// here refers to one who has received the double ordination. Th K/Commentary says that one who has received only her first ordination -- from the Bhikkhu grounds for a dukkata, while the Vibhanga notes that female novices and female probati grounds for an offense. //Instigating// means that the bhikkhuni praises Bhikkhu X to a person who is not already planning to give him food and concludes with the suggestion tha presented to him. If the lay person was already planning to give food to X, this factor is fulfilled. The Vibhanga defines "already planning to give food" in the following terms: Eith lay person are related, the lay person has previously invited X to ask for food, or the lay

already normally prepares food for X. The Commentary adds that if the lay person had alr
food for X before the bhikkhuni's instigation, X incurs no penalty in eating the food even
the Vibhanga's three conditions apply. Perception. If one is in doubt as to whether or n
food was offered at a bhikkhuni's instigation, the penalty for eating it is a dukkata regard
whether or not it was. If one does not know, then even if it was, there is no offense.
There is a dukkata for accepting food with the purpose of eating it, and a pacittiya for even
one eats. Non-offenses. There is no offense if: one does not know, one eats a
edible aside from the five staples offered at a bhikkhuni's instigation, the lay person w
instigated by a female probationer or female novice, or the lay person was already pla
present one with the food before the bhikkhuni's instigation. As we noted above, one's
relatives, people who have invited one to ask for food, and people who ordinarily provid
food also fit under this allowance. Summary: Eating any of the five staple foods th
lay person has offered as the result of a bhikkhuni's prompting -- unless the lay pers
already planning to offer the food before her prompting -- is a pacittiya offense.

* * * 30. Should any bhikkhu sit in private, alone with a
bhikkhuni, it is to be confessed. This rule is completely subsumed under another one -- P
-- the only instance where this happens in the Patimokkha. For explanations, see the disc
that rule. Summary: Sitting or lying down with a bhikkhuni in a place out of sight a
of hearing with no one else present is a pacittiya offense. * * * * *
* * *

CHAPTER EIGHT

Part Four: The Food Chapter ~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~

of the rules in this chapter classify food into two groups: //bhojana// (consumables) and //k
(chewables). Scholars usually translate the two as "softer food" and "harder food," altho
hardness and softness of a particular food have little to do with the category it belongs to.
translation closer to the essence of each category would be "staple food" and "non-staple
distinction between the two is important, for it is often the deciding factor between what is
an offense. Note, however, that the term //staple// here covers only what was considere
the time of the Buddha. Bread, pasta, and potatoes, which are staples in the West, were n
staples in India at that time, and so do not always fit into this category. Staple foods a
consistently defined as five sorts of foods, although the precise definitions of the first two a
matter of controversy. 1) //Cooked grains//. The Vibhanga defines this as seven type
cooked grain, but there is disagreement on the identity of some of the seven. They are //s
translates this as rice; the Thais, wheat); //vihi// (BD again has rice, and the Thais agree);
//yava// (BD has barley; the Thais, glutinous rice); //godhuma// (BD has wheat; the Thais, t
(both BD and the Thais identify this as millet or sorghum); //varaka// (BD doesn't identify
beyond saying that it is a bean; the Thais are probably right in identifying it as Job's tears)
//kudrusaka// (the Commentary states that this term covers all forms of grain that come fro
rye would be an example in the West). Whatever the precise definitions of these terms, th
argue from the Great Standards that any grain cooked as a staple -- including corn (maiz
would fit into this category. 2) //Kummasa//. The Commentary says that this is a staple
confection made out of //yava//, but doesn't describe it in any detail aside from saying that
//kummasa// is made out of any of the other grains or mung beans, it doesn't count as a st
References to //kummasa// in the Canon show that it was a very common staple that could
meal in and of itself and would spoil if left overnight. 3) //Sattu//. Any of the seven typ
of grain dried or roasted and pounded into meal. 4) //Fish//. The flesh of any animal
in the sea. 5) //Meat//. The flesh of any biped or quadriped, except for that which is
unallowable. The following types of meat are un-allowable: the flesh of human beings, ele
dogs, snakes, lions, tigers, leopards, bears, and hyenas (panthers). Human beings, hor
elephants were regarded as too noble to be used as food. The other types of meat were f
grounds that they were repulsive ("People were offended and annoyed and spread it abo
these Sakyan contemplatives eat dog meat? Dogs are loathsome, disgusting'") or danger
smelling of lion's flesh, went into the jungle; the lions there were offended and annoyed a
them). To eat human flesh entails a thullaccaya; to eat any of the other unallowable t
dukkata (Mv.VI.23.9-15). If a bhikkhu is uncertain as to the identity of any meat presented
incurs a dukkata if he doesn't ask the donor what it is (Mv.VI.23.9). Fish or meat, eve
an allowable kind, is unallowable if raw. Thus bhikkhus may not eat steak tartare, sasham
the half-shell, etc. (Raw flesh and blood are allowed at Mv.VI.10.2 only when one is pos

non-human beings (!)) Furthermore, even cooked fish or meat of an allowable kind is una
bhikkhu sees, hears, or suspects that the animal was killed specifically for the purpose of
bhikkhus (Mv.VI.31.14). Non-staple foods are defined according to context: a) in Pa
35-38: every edible outside of staple foods, juice drinks, the five tonics, and medicines
below). b) in Pacittiya 40: every edible outside of staple foods, water, and toothwood
in Pacittiya 41 (also the Bhikkhunis' Pacittiyas 44 & 54): every edible outside of staple f
five tonics, juice drinks, medicine, and conjey. The Commentary to Pacittiya 37 lists
following items as non-staple foods: flour and confections made of flour (cakes, bread a
without eggs would be classed here); also, roots, tubers (this would include potatoes), lotu
sprouts, stems, bark, leaves, flowers, fruits, nuts, seed-meal, seeds, and resins that are
food. Any of these items made into medicines, though, would not be classed as a non-sta
The Commentary also makes reference to the fact that some societies use roots, tubers,
out of flour, etc., as staple foods, but it nowhere suggests that the definition of staple foo
altered to fit the society in which one is living. Thus in the West we are left with a somewh
line separating what are and are not staple foods for the purposes of the rules: Meal po
grain is a staple; flour ground from grain is not. Bread made with oat meal, corn meal, wh
would thus be a staple; bread made without any grain meal or eggs (see below) would n
holds true for pastries, noodles, and pasta. This means that it would be possible for a
provide bhikkhus with a full, strictly vegetarian meal that would include absolutely no sta
The wise policy in such a case, though, would be to treat the meal as if it did contain staple
reference to the rules (Pacittiya 33 & 35) that aim at saving face for the donor. Con
the watery rice porridge or gruel commonly drunk before almsround in the time of the Bud
differently according to context. If it is so thick that it cannot be drunk and must be eaten
spoon, it is regarded as a staple food (Mv.VI.25.7; Pacittiya 33). "Drinking conjey" is class
non-staple food under Pacittiyas 35-38 & 40, whereas it is considered as neither a staple n
food under Pacittiya 41. The Commentary notes, though, that if drinking conjey has bits
fish "larger than lettuce seeds" floating in it, it is a staple food. Milk and curds are
classed as "finer staple foods" under Pacittiya 39. In other contexts they fit under the defin
non-staple food. All other dairy products -- except for fresh butter and ghee when u
tonics (see NP 23) -- are non-staple foods. Eggs are not mentioned in the Vibhanga or
Presumably they come under meat. If so, raw eggs are unallowable; and bread, pastries
pasta made with eggs are a staple food. In addition to staple and non-staple foods, the
the rules in this chapter mentions three other classes of edibles: juice drinks, the five to
medicines. Juice drinks include the freshly squeezed juice of sugar cane, lotus root,
fruits except grain, all leaves except cooked vegetables, and all flowers except liquorice (M
According to the Commentary, the juice must be strained, and may be warmed by sunlig
over a fire. (What category boiled juice would fit under, the Commentary does not say. Th
Mukha maintains that it would fit under sugar in the five tonics.) In discussing the Gr

Standards, the Commentary says that grain is a "great fruit," and thus the juice of any one fruits -- palmyra fruit, coconut, jackfruit, breadfruit, bottle gourd, white gourd, muskmelon watermelon, and squash -- would fall under the same class as the juice of grain: i.e., as a food and not a juice drink. From this judgment, many Communities infer that the juice of A fruit, such as pineapple or grapefruit, would also be classed as a non-staple food. Th Commentary notes further that if a bhikkhu himself makes a juice drink from fruit, etc., he l it counts as a non-staple food and must be consumed before noon. The five tonics a in detail under NP 23. Medicines. According to the Mahavagga (VI.3.1-8), any items in following categories that, by themselves, are not used as staple or non-staple food are me astringent decoctions, leaves, fruits, resins, and salts. For example, under fruits: Orang apples are not medicines, but pepper, nutmeg, and cardamom are. Most modern medicin category of salts. Using the Great Standards, we can say that any edible that is used as but does not fit under the categories of staple or non-staple food, juice drinks, or the five would fit here. Keeping and consuming. Each of the four basic classes of edibles -- juice drinks, the five tonics, and medicines -- has its "life span," the period during which it r kept and consumed. Food may be kept and consumed until noon of the day it is received; until dawn of the following day; the five tonics, until dawn of the seventh day after they are and medicines, throughout one's life. Edibles made from ingredients that have differe spans -- e.g., salted beef, honeyed cough syrup, sugared orange juice -- have the same the ingredient with the shortest life span. Thus salted beef is treated as beef, honeyed cou honey, and sugared orange juice as orange juice (Mv.VI.40.3). Tonics and medicines, and salt, received today may be eaten mixed with food or juice drinks received today, but food or juice drinks received on a later day. Medicine, such as salt, tea, or cocoa, receive may be eaten mixed with any of the five tonics on any day of the tonic's life span (Mv.VI.

* * * 31.A bhikkhu who is not ill may eat one meal at a public alms center. Should he eat more than that, it is to be confessed. " at that time a certain guild had prepared food at a public alms center not far from Savatt group-of-six bhikkhus, dressing in the morning, taking their bowls and robes, entere for alms but, after not getting any almsfood, went to the public alms center. The people said, 'At last the reverend ones have come,' and respectfully waited on them. Then on and the third day, the group-of-six bhikkhus, dressing in the morning, taking their bo robes, entered Savatthi for alms but, after not getting any almsfood went to the public center and ate. The thought occurred to them, 'Why should we bother going back to the Tomorrow we'll have to come right back here.' "So staying on and on right there ate the food of the public alms center. The members of other sects fled the place. were offended and annoyed and spread it about: 'How can these Sakyan contemplative eating the food of the public alms center? The food at the alms center isn't meant ju them; it's meant for absolutely everybody.'" A //public alms center// is a place wher

comers are offered as much food as they want, free of charge. Soup kitchens and shelter homeless, if they are run in this way, would fit under this rule. A //meal// is defined as one includes any of the five staple foods. //Not ill// in this rule is defined as being able to leav alms center. The origin story seems to indicate that this rule is directed against stayin eating day after day in the alms center. The Commentary, though, maintains that it forbids center two days running, without making any mention of whether the bhikkhu stays on a not. To eat one day in a center belonging to one family (or group) and the next day in a ce to another group, it says, entails no penalty. Non-offenses. According to the Vibhang is no offense in taking a meal on the second day -- if it does not include any of the five foods; if one is invited by the proprietors; if one is ill; if the food is specifically intended for bhikkhus (%); or if the center determines the amount of food the recipients m take, rather than allowing them to take as much as they want (%). The reason for this la is that if the owners of the center were unhappy with having a bhikkhu eat there, they co give him very little or nothing at all. Also, there is no offense in taking a second meal wh "coming or going," which in the context of the origin story seems to mean that one may t meal if one simply leaves the center and then comes back. The Commentary, though, inte as meaning "coming or going on a journey," and even here it says a meal should not be center two days running unless there are dangers, such as floods or robbers, that prevent continuing on one's way. Summary: Eating food obtained from the same public alms two days running, unless one is too ill to leave the center, is a pacittiya offense.

* * *

32.A group meal, except on the proper occasions, is to be confessed. Here the proper occasions are these: a time of illness, a time of giving time of making robes, a time of going on a journey, a time of embarking on a boat, a extraordinary occasion, a time when the meal is supplied by contemplatives. These are occasions here. This is a rule dating from Devadatta's efforts to create a schism in the "Now at that time Devadatta, his gain and honor lost, ate his meals having asked a them among households with his friends. (Here the Commentary elaborates: 'Think let my group fall apart," he provided for his friends by eating his meals among househol with his friends, having asked for them thus: "You give food to one bhikkhu. You gi two.'") People were offended and annoyed and spread it about: 'How can these Sa contemplatives eat their meals having asked and asked for them among households? V well-prepared things? Who doesn't like sweet things?'" Group meals. The Vibhang //group meal// as one consisting of any of the five types of staple foods to which four or m bhikkhus are invited. The Parivara (VI.2) adds that this rule covers any group meal that th at his/her own initiative, as well as any that results from a bhikkhu's requesting it. In the early days of the Buddha's career, donors who wished to invite bhikkhus to their home would invite an entire Community. Later, as Communities grew in size and there were tim in which donors were unable to invite entire Communities (Cv.VI.21.1), the Buddha allowe

//designated meals//, at which a certain number of bhikkhus were to be served. The do
the Community official in charge of meal distribution (//bhattuddesaka//) to designate
so-and-so many bhikkhus "from the Community" to receive their meals. Bhikkhus woul
rotating basis to these meals as they occurred. 2) //invitational meals//, to which spec
bhikkhus were invited. 3) //lot meals//, for which the bhikkhus receiving the meals wer
to be chosen by lot; and 4) //periodic meals//, i.e., meals offered at regular intervals, s
every day or every uposatha day, to which bhikkhus were to be sent on a rotating basis
designated meals. The bhattuddesaka was to supervise the drawing of lots and keep tr
the various rotating schedules. (The explanations of these various types of meal come
Commentary. For a fuller explanation, see Appendix III.) The no-offense clauses to
state that in addition to the exceptions mentioned in the rule, which we will discuss below,
does not apply to lot meals or periodic meals. The Commentary concludes from this -- an
it seems reasonable enough -- that the rule thus applies to meals to which the entire Com
invited and to invitational meals. (Buddhaghosa reports that there was disagreement amo
authorities as to whether or not it applies to designated meals -- more on this point below.)
The Commentary's conclusion, though, creates a problem when lay people want to invite
than three bhikkhus to their homes for a meal. Perhaps this problem is what induced the
interpret the Vibhanga's definition of group meal as meaning one in which the invitations s
mention the word "meal," "food," or the type of meal or food to be served. ("Come to my
breakfast tomorrow." "I know you don't often get a chance to eat Indian food, so I'm inviti
over for chappatties and curry.") This interpretation has led to the custom of phrasing in
to eat "in the morning" or to eat "before noon," so that groups of four or more bhikkhus ma
without breaking this rule. The Buddha's purposes for establishing this rule, though, a
listed at Cv.VII.3.13 as follows: "For the restraint of evil-minded individuals, for the comfort
well-behaved bhikkhus, so that those with evil desires will not split the Community by (form
faction, and out of compassion for householders." The Commentary's definition of //gro
accomplishes none of the purposes: The custom of phrasing invitations to avoid the word
"meal" does nothing to restrain evil-minded individuals, etc., and it actually creates trouble
people who do not know the custom, a point well-illustrated by the Commentary itself in a
entertaining section on how to deal with a person whose invitation contains the word "mea
getting the run-around from the bhattuddesaka -- who apparently was not allowed to tell hi
straightforward way how to phrase his invitation and so gave him a long series of hints -- t
returns to his friends and makes a cryptic statement that the A/Sub-commentary translates
are a lot of words that have to be spoken in this business of making an invitation. What's t
them all?" Two other arguments against the Commentary's interpretation are: 1) T
Vibhanga's definition of //invited// in this rule is repeated word-for-word under Pacittiyas
If the factor of mentioning "food" or "meal," etc., is necessary for there to be an offe
under this rule, it would have to be necessary under those rules as well, a proposal that

sense in their context, and that no one has ever suggested. 2) In the origin stories of the reformulations of the rule, bhikkhus refuse invitations on the grounds that they woul the rule against a group meal, and yet the invitations make no mention of "food" or "me An alternative interpretation. To find an alternative to the Commentary's explanation, we h to the origin stories leading to the reformulations of the rule, where we find an interesting The invitations rejected by scrupulous bhikkhus on the grounds that they would break the with "invitational" meals. In one of them, a naked ascetic invites a group of bhikkhus to a invitational meal and is rejected on the grounds that it would constitute a group meal. He the Buddha and -- after complaining that he should not be subjected to such treatment -- invitation, this time inviting the entire Community. This suggests that he felt an invitation o sort would not constitute a group meal. His reasoning has its grounds in the Vinaya its Throughout the Vibhanga and Khandhakas, the word "group" is used to refer to any set forming a complete Community and yet acting as an independent unit. This may be why t Community meal was not mentioned in the no-offense clauses: The arrangers of the Vib felt that no mention was necessary, in that the term "group" meal automatically excluded C Similar considerations suggest that designated meals may also be exempted from th though they are not mentioned in the no-offense clauses. Invitations to such meals were o worded as requests for so-and-so many bhikkhus "from the Community," and thus -- as a meal -- they would by definition not be invitations to a "group" meal. Since invitations meals and periodic meals did not customarily make reference to the Community, the Vibha did have to make mention of those types of meals in order to exempt them. We are l rule that applies exclusively to invitations to specific groups -- not Communities -- of four o bhikkhus regardless of whether or not the invitation mentions the word "food" or "meal." The rule in this form has the virtue of fulfilling the express purposes mentioned for it in the Cullavagga: It would prevent evil-minded bhikkhus and lay people from trying to exert influ specific groups in the Community by arranging meals especially for them; and in the same prevent people with evil desires from creating a split in the Community. (Since the smalles that can create a split in the Community is four bhikkhus, the maximum number allowed at three.) The rule in this form would also contribute to the comfort of well-behaved bhik that invitations to meals would not be pre-empted by factions; and it would protect househ being prey to the maneuverings of bhikkhus who would try to arrange for such meals as strategy to create and maintain such factions. (Anyone who has lived in a traditional Budd knows only too well the influence of sweet-talking bhikkhus over unsuspecting or low-min This sort of thing neither started nor ended with Devadatta.) Since Community meals designated meals would not form an opening for such machinations, there would be no rea them to groups of three if lay people want to invite groups larger than that. Thus the issue is not whether the invitation makes mention of food or meals, but whether it specifies individual bhikkhus to be invited. If it specifies more than three individual bhikkhus -- eit

naming them outright or saying such things as "Ven. X and four of his friends," or "The five
-- the meal would count as a group meal. Effort. To accept an invitation to a group m
entails a dukkata; and to eat it, regardless of whether one realizes that it is a group meal
pacittiya. Whether or not the bhikkhus actually eat together is not an issue. If they receive
at the same invitation to a group meal but then split up and eat it separately, they still inc
full penalty. Non-offenses. The Vibhanga defines the //proper occasions// mentioned
-- during which bhikkhus may eat a group meal without committing an offense -- as follows
time of giving cloth// is the "robe season." //A time of making robes// is any time the bh
are making robes. //A time of journeying// is any time the bhikkhus are about to go
are going, or have just returned from a journey of at least half a league (about five mile
kilometers). //A time of embarking on a boat// is any time the bhikkhus are about to
embark, are embarking, or are disembarking from a boat. No minimum distance for the
specified. //A time of illness// is, in its minimal terms, a time when the bhikkhus' fee
are split (and they cannot go for alms). //An extraordinary occasion// is one in which th
many bhikkhus in proportion to the donors giving alms that three bhikkhus going for
obtain enough food to support themselves, but not enough to support a fourth. //A
supplied by contemplatives// is one provided by a person who has taken on the state of
wanderer. This the Commentary explains as meaning not only those ordained in other
also one's own co-religionists (bhikkhus and samaneras) as well. This interpretation, th
completely negate the effect of the rule. The word the Vibhanga uses for religious w
(//paribbajaka//) refers throughout the Canon to members of other sects and never to Bu
bhikkhus, bhikkhunis, samaneras, etc. We may safely assume that it carries the same
here. This exemption, as its origin story makes clear, was formulated to promote good
relations between bhikkhus and members of other sects. Aside from the proper occasio
offense -- if groups of three or less eat a meal to which they have been specifically
invited; if the meal to which a group of four or more is invited does not include any of
kinds of staple food; or if bhikkhus, having walked separately for alms, eat assembled as
group. No mention is made of whether or not bhikkhus can go for alms in groups of f
as is the custom at present in the rural areas of many Buddhist countries. From the variou
bhikkhus and bhikkhunis on almsround that appear in the Canon, it seems that the custom
go individually. Pacittiya 42 mentions bhikkhus going for alms as a pair, but the Vibhanga
they might receive less food that way than when going individually. Apparently, going as a
not have made much sense in their cultural context. As mentioned above, the Vibhang
that there is no offense for groups of any number eating periodic meals or lot meals; and
already stated, our interpretation would explicitly extend this exemption to cover Communi
designated meals as well. Summary: Eating a meal to which four or more individual
bhikkhus have been specifically invited -- except on special occasions -- is a pacittiya of

* * * 33. An out-of-turn meal, except on the proper

occasions, is to be confessed. Here the proper occasions are these: a time of illne
time of giving cloth (the robe season), a time of making robes. These are the proper oc
"Now at that time a succession of meals of sumptuous foods had been arranged i
thought occurred to a certain poor laborer: 'The way these people respectfully pres
isn't a bad thing at all. What if I were to present a meal?' So he went to Kirapatika and
'Master, I want to prepare a meal for the Community of bhikkhus with the Buddha at it
Please give me my wage.' Now Kirapatika had faith and confidence in the Buddha,
the laborer more than his wage. "Then the laborer went to the Blessed One, paid re
down to one side, and said, 'May the Lord together with the Community of bhikkhus
meal with me tomorrow.' "'You should be warned, friend, that the Community of
is large.' "'Let it be large, Lord. I have prepared plenty of jujube fruits. The
beverages will be full of jujube mixture.' "So the Blessed One consented by remainin
silent....The bhikkhus heard, '...The beverages will be full of jujube mixture,' so right
before the time of the meal, they went for alms and ate. People heard, 'They say that th
laborer has invited the Community of bhikkhus with the Buddha at its head,' so they too
of staple and non-staple foods to the laborer....(When the time came for the meal) t
One went to the poor laborer's house and sat on the appointed seat together with the C
bhikkhus. Then the poor laborer served the bhikkhus in the dining area. The bhikkhu
a little, friend. Give just a little.' "'Don't take so little, thinking that I'm just
a poor laborer. I have prepared plenty of staple and non-staple food. Take as muc
want.' "'That's not the reason why we are taking so little, friend. Simply that we
went for alms and ate just before the time for the meal: //That's// why we are taking so l
"The poor laborer was offended and annoyed and spread it about: 'How can thes
ones eat elsewhere when they were invited by me? Am I not capable of giving them as
they want?'" Object. The term //out-of-turn meal// covers two sorts of situations: A bh
has been invited to a meal consisting of any of the five staple foods but then either (1) goe
and eats another meal consisting of any of the five staple foods at the same time as the
he was originally invited; or (2) eats a staple food right before going to the meal, as in the
story. Effort. The Vibhanga states that there is a dukkata for accepting -- with the thou
eating it -- food that will constitute an out-of-turn meal, and a pacittiya for every mouthful o
Whether or not one perceives it as an out-of-turn meal, the offense is the same. Pr
times. The special occasions when one may accept and eat an out-of-turn meal are defin
//A time of illness// is when one is unable to eat enough at one sitting and so has to e
more times in a morning. //The times of giving cloth// and //making robes// are defined
in the preceding rule. The reason for exempting them is that in the days of the Buddha,
thread were hard to come by, and donors who wanted to offer them usually did so in co
with a meal. If these exemptions were not made, a bhikkhu making a robe, having alrea
to one meal, could not go to another meal beforehand to receive the cloth or thread offe

there. There is reason to believe that these three exemptions apply to out-of-turn mea
type mentioned in the origin story: i.e., a bhikkhu is allowed in these cases to go to anothe
before attending the meal to which he was originally invited. Sharing invitations. As
sort of out-of-turn meal where a bhikkhu invited to one meal goes to another meal instead,
in a story ancillary to this rule gives permission to share invitations: If a bhikkhu has recei
invitation, he may give it to another bhikkhu or novice by saying, "I give my expectation of
so-and-so." He is then allowed to eat elsewhere. The Commentary regards the act of
mere formality: One may even make the statement outside of the other bhikkhu's prese
knowing anything about it. This, though, is very unlikely to satisfy the original donor. The
in this case would be to make the statement in the presence of the other bhikkhu -- "I giv
expectation of a meal to you" -- making reasonably sure that he is willing and able to go.
Vinaya Mukha adds, though, that if the donors of the meal have specifically invited one to
one is going to an invitational meal rather than a designated meal (see Pacittiya 32) -- it
bad manners to share the invitation without making an agreement with the donors first.
Non-offenses. In addition to mentioning the "proper times" during which one may eat an
the no-offense clauses state that there is no penalty for a bhikkhu who, on receiving an
states, "I will go for alms." This statement the Commentary explains as a refusal, and inte
allowance as meaning that if a bhikkhu refuses an invitation, he is still allowed to eat an
at the time for which the invitation was made. If the Vibhanga arrangers did mean this sta
refusal, though, it is probably for the sake of those bhikkhus who hold to the //dhutanga/
going for alms and not accepting invitations. If a bhikkhu who does not hold to such a vow
invitation for a time for which he has no prior commitment, it is considered very bad manne
were to later accept an invitation for a meal served at the same time as the meal he earlie
it would be extremely bad manners. An alternative explanation for the statement, "I wil
alms," is that there is no offense if the bhikkhu lets the donor know beforehand that he will
before the meal: He can have his alms meal first and then go to receive the meal offered
donor. This would make room for the custom common in village monasteries throughout
where invitations are usually for the late-morning meal, and bhikkhus are expected to have
early-morning alms meal before that. (If this interpretation does not hold, most village bhik
then probably claim a perpetual "time of illness" as their exemption from this rule.) M
that do not include any of the five staple foods are also exempted from this rule. Thus if o
to a meal and takes a snack of milk, drinking conjey, fruit, etc., beforehand, this would n
constitute an offense -- although to be in keeping with the spirit of the rule, one should not
much as to spoil one's appetite for the meal. There is no offense if, when invited to m
one meal on the same day, one goes to them in the order in which one received the invi
Pacittiya 35); if one puts the food from the various invitations together in one's bowl and e
the same time; or, if invited by an entire village, one goes to eat anywhere in the village.
The Commentary, in discussing this point, mentions a situation that often occurs where th

bhikkhus in proportion to the number of donors: A bhikkhu has been invited to a meal, but leaves the monastery to go to the meal, another group of donors arrives with food to place after he arrives at the home of the original donor, another group of donors arrives with st food. According to the Commentary he may accept the food of these various donors as lo -- when he finally gets around to eating -- to take his first mouthful from the food offered original donor. Meals offered on a periodic basis and those for which bhikkhus are ch lot do not count as out-of-turn meals under this rule. The Canon offers no explanation for exemptions, but the Commentary to Cullavagga VI shows that the custom was for many such meals on the same day. This exemption would thus seem to provide for the situation fewer bhikkhus than there are families preparing these meals: One bhikkhu would be al more than one meal so that no family's meal would go without a recipient. A passage Mahavagga (VI.25.7) implies that if the donor of the meal provides a pre-meal snack of thi by extension any other staple food -- there would be no offense in eating it. And the Com notes that if the donor gives explicit permission to eat another meal before the one he/she providing, there would be no offense in doing so. Summary: Eating a meal before goin meal to which one was invited, or accepting an invitation to one meal and eating els instead, is a pacittiya offense except when one is ill or at the time of giving cloth or making robes. * * * 34. In case a bhikkhu arriving at a family residence is presented with cakes or cooked grain-meal, he may acc or three bowlfuls if he so desires. If he should accept more than that, it is to be confess Having accepted the two-or-three bowlfuls and having taken them from there, he is them among the bhikkhus. This is the proper course here. The purpose of this rule i prevent bhikkhus from abusing a donor's generosity and good faith. The origin story d two separate cases. In the first, a woman named Kana is about to return to her husband's visiting her parents. Her mother, thinking, "How can one go empty-handed?" bakes some comes, and the mother -- being a faithful lay follower -- presents him with the cakes and some more to replace them. The bhikkhu, meanwhile, has informed another bhikkhu that Kana's house, so the second bhikkhu goes and receives the second batch of cakes. Th up until Kana's husband tires of waiting for her and takes another woman for his wife. The notes, reasonably enough, that Kana developed a long-term grudge against Buddhism a incident. In the second case, a man is preparing provisions for a journey by caravan. similar series of events takes place, and he eventually ends up tagging along behind the c getting robbed. People become offended and annoyed as usual, and spread it about, "Ho Sakyan contemplatives accept food without knowing moderation?" Object. In the cont rule, the Vibhanga defines //cakes// so as to cover anything prepared as a present, and grain-meal// (//sattu//) so as to cover anything prepared as provisions for a journey. The w //journey// here refers to journeys that the donors are planning to take themselves. This ru does not cover gifts of food that donors have prepared to give to a bhikkhu for a journey //

planning to take. The Vinaya Mukha, using the Great Standards, infers from the Vibh definitions for cakes and cooked grain-meal that any food prepared in large quantities for s party, banquet, or reception, etc., should be covered by this rule as well. Protocol. If bhikkhu is presented with such things -- i.e., invited to take as much as he likes -- he may than two or three bowlfuls. To take more than that would entail a pacittiya. Returning fr he should tell every bhikkhu he sees, "I accepted two or three bowlfuls over there. Don't y anything there." He incurs a dukkata if, seeing a bhikkhu, he does not tell him, while there for the other bhikkhu if, having been told, he accepts anything at the place in question. A to the Commentary, if the first bhikkhu accepts two bowlfuls, he should tell the second bhi no more than one, and all other bhikkhus he meets that they should not accept anything only one bowlful, he should follow a similar process so that, all-in-all, the bhikkhus accept no more than three. The Commentary states further that a bhikkhu receiving two or bowlfuls may keep one bowlful and do as he likes with it, but must share the remainder am Community, i.e., not just among his friends. A bhikkhu receiving only one bowlful may do he likes . Non-offenses. The Vibhanga states that there is no offense in taking more three bowlfuls of items not intended as presents or provisions, of items left over from prepa or provisions, or of provisions remaining when plans for a journey have been abandoned above, the Vinaya Mukha would include items prepared for sale or for parties, etc., under t "provisions" here. The Vibhanga also says that there is no penalty in accepting more bowlfuls from relatives or from those who have offered an invitation. Here the Commentar such people give more than three bowlfuls outright, one may accept them without penalt tell one to take as much as one likes from items prepared as presents or provisions, the pr do is to take only two or three bowlfuls. Also, there is no offense in having more than bowlfuls of provisions purchased with one's own resources. Finally, the Vibhanga sa there is no offense in taking extra for the sake of another. Neither the Commentary nor Sub-commentary discusses this point, but the only way it can make sense in the context o it refers to cases where the bhikkhu takes extra for the sake of another not on his own in but because the donor asks him to. Summary: Accepting more than three bowlfuls of the donors prepared for their own use as presents or as provisions for a journey is a pa offense. * * * 35.Should any bhikkhu, having eaten and turned down an offer (of further food), chew or consume staple or non-staple that is not left over, it is to be confessed. "Now at that time a certain Brahmin, having in bhikkhus, gave them a meal. The bhikkhus, having eaten and turned down an offer food, went to their relatives' families. Some ate there, some left having received al "Then the Brahmin said to his neighbors, 'Masters, the bhikkhus have been satisfi Come and I will satisfy you as well.' "They said, 'Master, how will you satisfy us? Even those you invited came to our homes. Some ate there, some left having rece "So the Brahmin was offended and annoyed and spread it about, 'How can their

having eaten in my home, eat elsewhere? Am I not capable of giving as much as they

When a donor invited bhikkhus for a meal, the custom in the time of the Buddha was fo offer food to the bhikkhus repeatedly while they ate, and to stop only when the supplies of exhausted or the bhikkhus refused any further offers. (This custom is still widespread in S Burma.) Thus it was often a matter of pride among donors that their supplies were not eas exhausted and that they could continue offering food until the bhikkhus were completely sa could eat no more. Now where there is pride, there is bound to be wounded pride: A don easily feel insulted if bhikkhus refused further offers of food, finished their meal, and then v someplace else. As the origin story shows, this rule is designed to protect generous d being insulted by the bhikkhus in this way. It is also designed to protect bhikkhus from bei go hungry by stingy or impoverished donors. If the donor stops offering food before the refused further offers -- or if what he/she offers is not substantial food at all (see the discus under Pacittiya 8 for an historic case of this sort) -- the bhikkhus, after finishing their mea free to accept food elsewhere that morning if they are still hungry. Having eaten (//bhuttavi//), according to the Vibhanga, means having eaten any of the five staple foods, as a blade of grass." On the surface, this could mean one of two things: having taken o bite of a meal, or having finished a meal -- even the smallest possible one. The Comment first interpretation, but in doing so creates two problems: 1) If having eaten means hav one's first bite of a meal, then the word serves no purpose in the rule, because the first factor of "having turned down an offer of further food" is "the bhikkhu is eating," and as t Commentary itself notes, if one is eating then one has already taken one's first bite of th

It concludes that the word "having eaten," both in the rule and in the Vibhanga, is co superfluous. 2) A more practical problem coming from the Commentary's interpret that if one turns down an offer of extra food when one already has more than enough fo but has yet to finish one's meal, one cannot continue eating. The Commentary tries around this predicament by introducing an additional factor: As long as one does not m spot on which one is sitting, one may continue eating. This, though, creates further problems: Suppose a bhikkhu has turned down an offer of further food but has yet to fi If there is then some compelling reason for him to move from the spot on which he -- for example, the donor spills a pot of hot soup, or ants come crawling into his robes -- cannot finish his meal even if the donor begs him to continue eating. The Sub-comm around the first problem by interpreting "having eaten" as "having finished a meal," which t with the origin story and with the linguistic usage of the Vibhanga itself. (There is a sepa term, //asana//, for one who is in process of eating a meal without yet having finished it.) T author of the Sub-commentary doesn't realize, though, that in adopting this interpretation h eliminating the need for the Commentary's extra factor concerning moving from one's spot factor is unnecessary, and there is no basis for it in the Canon, there would seem to be no adopt it. Thus the Commentary's factor, and not the wording of the rule, is what is superflu

we can say that "having eaten" means having finished one's meal, and that the question o
from one's spot doesn't enter into the rule. As the Commentary itself notes when disc
term //asana//, the point where one finishes eating is determined in one of two ways:
There is no food left in one's bowl, hand, or mouth; or b) one has decided that one has ha
that particular meal. Thus, as long as the bhikkhu has not yet finished the donor's
meal, he is free to refuse, accept, and eat food as he likes. In other words, if he refuses a
further food, he may continue eating what is left in his bowl. If he initially refuses an offer
further food but then gives in and accepts it after being pressured by the donor, he may ea
accepts without penalty. Or if he feels, for example, that he has enough vegetables but w
more rice, he may refuse an offer of vegetables yet accept and eat an offer of rice that foll
But once he no longer has any food in his bowl, hand or mouth and/or has decided that
enough for that particular meal, he fulfills the factor of "having eaten" under this rule. If he
refused an offer of further food before finishing the meal, he may not for the remainder of t
any staple or non-staple foods that are not leftovers. Turning down an offer for furthe
The Vibhanga defines this as an act with five factors: 1) The bhikkhu is eating. 2) T
further staple food. 3) The donor is standing within //hatthapasa// (1.25 meters) of the
bhikkhu. 4) He/she offers the food. 5) The bhikkhu turns it down. The Commentary
if the bhikkhu has finished eating before the further food is offered, factor (1) is not fulfilled
he turns down the food he does not fall under the terms of this rule. Similarly, if the food
factor (2) is not a staple food -- e.g., if it is fruit, chocolates, or cheese -- or if it is staple foo
of a sort unallowable for a bhikkhu to eat -- e.g., it has been offered as a result of a bhikk
claiming a superior human state or corrupting a family (see Sanghadisesa 13), or it is mad
flesh or snake meat, etc. -- the factor is not fulfilled. Since none of the texts specify that th
under factor (3) must be unordained, a bhikkhu offering food to a fellow bhikkhu would a
fulfill this factor as well. Thus this rule would apply not only to meals offered by lay donors
to food handed out by bhikkhus and samaneras in a monastery. Factor (5) is fulfilled
refusal made by word or gesture. Staple & non-staple food. Staple food, here, follows
definition. Non-staple food, in the context of this rule, refers to all edibles except for the
staple foods, juice drinks, the five tonics, medicines, and water. Leftover food is of tw
sorts: left over from a sick bhikkhu's meal, and formally "made" leftover by a bhikkhu who
In the latter case, the formal act has seven factors: 1) The food is allowable. 2) Bhik
has formally received it. 3) He offers it to Bhikkhu Y. 4) He remains within hatthapasa o
Y. 5) Bhikkhu Y has finished his meal. 6) Bhikkhu Y has not yet gotten up from the seat
finished his meal and refused further food; and 7) he says, "I have had enough of all
The Commentary notes that any bhikkhu except Bhikkhu Y may eat the food formally m
this way. Effort. If a bhikkhu who, having eaten and turned down an offer for further
presented with staple or non-staple that is not left over -- e.g., a snack of milk or ice cream
incurs a dukkata if he accepts it with the thought of eating it, and a pacittiya for every mo

eats. Perception is not a factor here. Whether or not the bhikkhu realizes that the fo
not left over is irrelevant to the offense. This point is what led to the following rule.
Non-offenses. There is no offense -- if a bhikkhu accepts the food and takes it for the s

other words, a bhikkhu under the circumstances covered by this rule may not take t
as food. The Vibhanga says that if he accepts them with the idea of taking them as foo
dukkata; while the Commentary imposes a further dukkata for every mouthful he ea
According to the Mahavagga (VI.14, VI.9.2, VI.20.4; V.32), this rule is relaxed during times
that a bhikkhu who has eaten and turned down an offer for further food may later in the da
food that is not left over: if it was accepted before he went to his meal, if it is
brought back from a place where a meal has been offered, or if it has been taken
wilderness area or a pond. The texts offer no explanation for this last stipulation. Perha
famines, these were places where most people would be foraging for food. Su
Eating staple or non-staple food that is not left-over, after having earlier in the day finish
meal during which one turned down an offer to eat further staple food, is a pacittiya
offense. * * * 36.Should any bhikkhu,
knowingly and wishing to find fault, present staple or non-staple food to a bhikkhu who h
and turned down an offer (for further food), saying, "Here, bhikkhu, chew or consume
it has been eaten, it is to be confessed. "Now at that time two bhikkhus were trave
through the Kosalan districts on their way to Savatthi. One of them indulged in bad
the second one said, 'Don't do that, my friend. It isn't proper.' The first one developed a
grudge. Eventually, they arrived at Savatthi. "Now at that time one of the guilds in S
gave a meal to the Community. The second bhikkhu finished his meal, having turn
offer for further food. The bhikkhu with the grudge, having gone to his relatives and brin
back alms food, went to where the second bhikkhu was staying and on arrival said, 'He
some of this.' "'No thanks, my friend. I'm full.' "'Really, this is delicious
alms food. Have some.' "So the second bhikkhu, being pressured by the first, ate
of it. Then the bhikkhu with the grudge said to him, 'You think //I'm// the one to be repri
when //you// eat food that isn't left over, after finishing your meal and turning down a
offer for further food?' "'Shouldn't you have told me?' "'Shouldn't you have
asked?'" This rule covers cases in which one bhikkhu, knowingly and wishing to fin
offers food to another bhikkhu in order to trick him into committing an offense under the pr
The full offense here requires a full set of five factors: 1) //Object//: staple or non-stap
food. 2) //Effort//: One gives the food to a bhikkhu who has turned down an offer of fu

food, as under the previous rule. 3) //Perception//: One knows that he has turned down a further food. 4) //Intention//: One wishes to find fault with him. 5) //Result//: He accep food and eats from it. Only three of these factors -- object, intention, and result -- req further explanation. Object. //Staple food//, here, follows the standard definition. //Non-staple food//, in the context of this rule, refers to all edibles except for the five staple juice drinks, the five tonics, medicines, and water. Whether or not the food is actually le not a factor in determining the offense here. The important point lies in the perception: As assumes the food to be not left over, one is subject to a penalty if the other bhikkhu acce one assumes the food to be left over, one's actions would not fit under this rule. Inter //Wishing to find fault//, according to the Vibhanga, means planning to accuse, criticize or s bhikkhu after one has succeeded in tricking him into breaking the preceding rule. Re Bhikkhu X, in giving food to Bhikkhu Y "knowingly and wishing to find fault," incurs a dukka accepts the food with the thought of eating it, and a pacittiya when Y has stopped eating X then accuses or shames Y, he is to be treated under Pacittiya 2 as well. As for Y, the C notes, he doesn't escape the penalty under the preceding rule even though he has been offense. In other words, both bhikkhus in the origin story were right: The bhikkhu with a g have told the second bhikkhu, while the second bhikkhu should have asked. Non-off is no offense -- if one gives the other bhikkhu left-over food, if the other bhikkhu take food for the sake of another, or if one gives him juice drinks, any of the five tonics, medici or water. None of the texts make any mention of a bhikkhu trying to trick another bhik committing an offense under any rule other than Pacittiya 35; and apparently, a bhikkhu w fellow bhikkhu into committing an offense under Pacittiya 35 with no desire to blame or s simply for the perverse satisfaction of seeing him commit the offense, would incur no pena or any other rule. There is no escaping the fact, though, that such actions carry their ow penalty in terms of one's spiritual maturity. This is one of those cases where we have to lo particulars of the rule to the general principle underlying it: that one should not deliberate another person into breaking a rule or vow that he or she has pledged to uphold. Su Deliberately tricking another bhikkhu into breaking the preceding rule, in hopes of findin him, is a pacittiya offense.

* * *

37.Should any bhikkhu chew or consume staple or non-staple food at the wrong time, it confessed. Object. //Staple food// here follows the standard definition given in the prefa this chapter. //Non-staple food// refers to all edibles except for the five staple foods, juice the five tonics, medicines, and water. The wrong time. The Vibhanga defines the //wr as from after noon until dawn of the following day. (See Appendix I for a discussion of h defined.) Noon is reckoned as the moment the sun reaches its zenith, rather than by the c words, by local rather than standard or daylight-savings time. Thus, for example, a bhik offered food while traveling in an airplane should check the position of the sun in order to whether or not he may accept and eat it. Some have argued that one may eat after noon

one's meal before noon, but the Commentary says explicitly that this is not the case.
The verbs //chew// and //consume// in the Pali of this rule are the verbs normally paired, re
with non-staple and staple foods. They both mean "to eat," but the question arises as to
eating means going down the throat or entering the mouth. This becomes an issue, for ins
bhikkhu has a piece of food stuck in his teeth from his morning meal and swallows it afte
The Commentary generally defines eating as going down the throat, but a passage fron
(V.25) suggests otherwise. In it, the Buddha allows a ruminator who brings up food to his
"wrong time" to swallow it, and ends with the statement: "But food that has been bought o
mouth should not be taken back in. Whoever should take it in is to be dealt with according
(i.e., this rule and the following one)." This suggests, then, that eating is technically defin
"taking into the mouth." Offenses. A bhikkhu who, intending to eat it, accepts staple or
non-staple food at the wrong time incurs a dukkata. If he eats staple or non-staple food at
time -- regardless of whether he accepted it at the right or wrong time -- he incurs a pacitti
every mouthful he eats. As for juice drinks, the five tonics, and medicine, there is a dukka
accepting them to be used as food at the wrong time, and another dukkata for eating them
the wrong time. Perception is not a factor here. Thus, a bhikkhu who eats food in the
time unknowingly -- e.g., assuming that noon has not passed when it actually has, or that
to one of the other classes of edibles when it actually doesn't -- commits an offense all th
No exception is granted to an ill bhikkhu, because there are a number of edibles an ill
may consume at the wrong time without involving an offense: juice drinks, the five tonics,
medicines. Also, there is an allowance in the Mahavagga (I.14.7) for a bhikkhu who has ta
to take strained meat broth, strained rice broth, or strained green gram (mung bean) broth
of the day. Using the Great Standards, we may say that a bhikkhu who has a similar illnes
take these broths at any time; and some have argued that other bean broths -- such as s
would fit under the category of green gram broth as well. However, unlike the case with th
mere hunger or fatigue would not seem to count as sufficient reasons for taking any of th
substances in the "wrong time." A substance termed //lonasoviraka// (or //lonasociraka
allowed (Mv.VI.16.3) in the wrong time as a medicine for ill bhikkhus and, when mixed with
beverage for bhikkhus who are not ill. No one makes it anymore, but the recipe for it in the
Commentary to Parajika 3 bears some resemblance to the recipe for //miso// (fermented s
Some have argued, using the Great Standards, that the special allowance for this substan
extend to miso as well, but this is a controversial point. As far as I have been able to asce
is not used to cure diseases in adults even in China, which would be the place to look fo
a medicine. However, even if the allowance does apply to miso, taking miso broth as food
time would entail a dukkata. Non-offenses. There is no offense if, having a reason, o
consumes juice drinks, any of the five tonics, medicine, or water after noon or before dawn
Summary: Eating staple or non-staple food in the period after noon until the next dawn i
offense. * * * 38.Should any bhikkhu chew or

consume stored-up staple or non-staple food, it is to be confessed. This is one of the rules where the original instigator was an arahant: Ven. Belatthasisa, Ven. Ananda's prec formerly the head of the 1,000 ascetics who attained Awakening on hearing the Fire Ser story here reports that he made a practice of keeping left-over rice from his alms-round, dr then moistening it to eat on a later day. As a result, he only rarely had to go out for alms though he was doing this out of frugality rather than greed, the Buddha still rebuked him. doesn't give the precise reasons for the rebuke. Perhaps it was because he saw that such open the way for bhikkhus to avoid going on almsround, thus depriving themselves of th opportunity that alms-going provides for reflecting on their dependency on others and on t condition in general; and depriving the laity of the benefits that come from daily contact w bhikkhus and the opportunity to practice generosity of the most basic sort every day. Altho may be a virtue, there are times when other considerations supercede it. At any rate, showed great foresight in formulating this rule. Over the centuries, whenever bhikkhus ha Communities where vast stores of food were kept -- such as the great Buddhist universitie bhikkhus have tended to grow lax in their practice, and a gulf of misunderstanding and sus come to separate them from the laity. Object. //Staple food// here, as usual, follows th definition given in the preface to this chapter. //Non-staple food// here includes all edible for the five staples, juice drinks, the five tonics, medicine, and water. //Stored-up// me formally accepted by a bhikkhu (see Pacittiya 40, below) on one day and eaten on the nex The boundary between one day and the next is dawn. According to the Commentary bhikkhu accepts food today but then gives it to an unordained person, having abandoned it in his mind, and then the person happens to present it again to that bhikkhu or to anothe following day, it does not count as stored-up under this rule. If, however, the bhikkhu do abandon possession of the food in his mind, and the unordained person presents it again it still counts as stored-up even if the bhikkhu did not say with word or gesture that the fo be kept and presented to him again. Since this factor is difficult to determine with abso certainty in cases where food is left over after being presented to a number of bhikkhus -- hardly any way of being sure that they have all renounced possession of the leftovers -- m Communities ignore the Commentary's allowance and do not permit their members to acc that they formally received on a previous day. The story of the Second Council (Cv.X shows that this rule also forbids storing such medicines as salt (or pepper, vinegar, etc.) any bland food one might receive on a later day. (See the discussion preceding Pacittiya details on this subject.) Effort. The Vibhanga says that there is a dukkata "if one acc it, thinking, 'I will eat it'" -- the Commentary interprets this as taking or accepting, with the of eating, food that has been stored up -- and a pacittiya for every mouthful one eats. Perception is not a factor here. Thus, a bhikkhu who eats stored-up food commits an offe whether or not he perceives it as stored-up. This means -- 1) If Bhikkhu X receives th one day and, without renouncing possession of it, lets someone else put it away, and

eats it on a later day, Y commits an offense all the same, regardless of whether or not h
the food was stored-up. 2) One should be careful that there are no traces of any e
received yesterday on a utensil from which one will eat food today. The duties a stud
perform for his preceptor (//upajjhaya-vatta//) (Mv.I.25.9) show that the custom in the
Buddha's time was to rinse out one's bowl before going for alms. The Commentary sug
making sure that one's bowl is clean: Run a finger along the inside of the bowl while it i
dry. If there is enough food residue or dust in the bowl for the finger to make a mark in
the bowl again before use. Derived offenses. If a bhikkhu accepts or takes, for the sake
food, juice drinks, any of the five tonics, or medicine that has been stored overnight, there
in the taking, and another dukkata for every mouthful he eats. The Commentary, though,
when a bhikkhu takes, not for food but simply to assuage his thirst, a juice drink stored ove
incurs a pacittiya for every swallow he drinks. It seems strange that drinking the juice
as juice would entail a stronger penalty than taking it as food, and as there is no basis ar
the Canon for the Commentary's assertion, there seems to be no reason to adopt it. Mv.V
clearly that juice drinks, taken for any reason, are allowable at any time on the day they
accepted, but not after the dawn of the following day. No specific penalty is given for takin
the following day, but we can infer from the Vibhanga to this rule that the penalty would b
dukkata. Non-offenses. There is no offense in the mere act of storing food. A bhikkh
on a journey with an unordained person may thus carry the latter's food -- while the latter c
bhikkhu's food -- without committing an offense. There is also no offense in telling an
person to store food that has not been formally received. For example, if donors simply
a bhikkhu's residence without formally presenting it, the bhikkhu may tell a novice or lay pe
it and put it away for a later day. If the food is then presented to the bhikkhu on a later d
may eat it that day without penalty. However, food may be stored in a monastery onl
building formally agreed on for the purpose (Mv.VI.33.2). Since bhikkhus may not use s
as a dwelling place (Mv.VI.33.4), a bhikkhu who has food stored in his dwelling would incu
may, however, store medicines or the five tonics in his dwelling without penalty. If a
bhikkhu accepts, sets aside, and then eats any of the four kinds of edibles all within their p
time periods -- e.g., he receives bread in the morning, sets it aside, and then eats it befo
noon; or receives honey today, sets it aside, and takes it as a tonic tomorrow -- there is no
This rule makes no exceptions for a bhikkhu who is ill, although the rule as a whole is s
when there is scarcity and famine, and reinstated when the scarcity and famine have pass
(Mv.VI.17-20; Mv.VI.32). Summary: Eating food that a bhikkhu -- oneself or another --
formally received on a previous day is a pacittiya offense. * *
* 39.There are these finer staple foods, i.e., ghee, fresh butter, oil, honey,
sugar/molasses, fish, meat, milk, and curds. Should any bhikkhu who is not ill, having a
finer staple foods such as these for his own sake, then eat them, it is to be confessed
Vibhanga defines //finer staple foods// as any of the nine foods mentioned in the rule, eithe

own or mixed with other foods. Thus milk and milk-mixed-with-cereal would both be finer The ancient commentators, though, must have objected to including some of these items of staple food (//bhojana//), so we have the Commentary defining "finer staple foods" as substances mentioned in the rule mixed with any one of the seven types of grain. Thus, it with cereal would be a finer food, but milk on its own would not. As we have seen, tho Vibhanga defines its terms to fit with the situation covered by each particular rule and is no consistent from one rule to another. Thus, since the Vibhanga is not at fault for being inco here, there is no reason to follow the Commentary in deviating from it. The rule means wh It covers each of the foods mentioned in it, whether pure or mixed with other ingredients. first five of these finer foods are discussed in detail under NP 23. //Fish// and //meat// are d in the preface to this chapter. //Milk and curds// here refers to milk and curds from anima flesh is allowable. The Sub-commentary, in discussing this point, maintains that tiger's mil milk, etc., are not unallowable, simply that they would not come under this rule. This is a interesting idea, but was included probably just to wake up sleepy students in the back of t According to the Commentary, any food other than these nine finer foods is grounds fo under Sekhiya 37. Effort. A bhikkhu who is not ill, requesting the foods for his own u incurs a dukkata for every request he makes, a dukkata for accepting the food, and a paci mouthful he eats. //Not ill// means that one is able to fare comfortably without these f None of the texts go into detail on this point, but //ill// probably means something more tha being hungry, for there is a separate allowance under Sekhiya 37 for a bhikkhu who is h for rice and bean curry, which was the basic diet of the day, and the Commentary extends cover all foods not covered by this rule. Here //ill// probably refers to any form of fatigue weakness, or malnutrition that comes specifically from lacking any of the foods mentioned The Commentary adds that if a bhikkhu asks for one kind of finer food but receives an instead, he incurs the dukkata for asking, but no penalty for accepting and eating what he also notes that when a bhikkhu asks a lay person for any of the finer foods, and the lay pe donation of money to the bhikkhu's steward to buy that food, then once the food is bought under this rule all the same. Non-offenses. There is no offense: in asking for food any kind of food -- when one is ill, and then eating it, even if one has recovered in the m in eating food that has been requested for the sake of an ill bhikkhu and is left over aft meal; in asking from relatives; in asking from those who have offered an invitation to as asking for the sake of another person; or in asking that food be bought with one's own res Also, according to the Mendaka Allowance (Mv.VI.34.21), a bhikkhu going on a journey th area where alms food is difficult to obtain may search for provisions of husked rice, kidney green gram (mung beans), salt, sugar, oil, and ghee for the journey. The Commentary say should first wait for spontaneous offerings of these provisions from people who learn of h the journey. If these aren't forthcoming, he should ask from his relatives or from those wh him an invitation to ask, or else see what he gets on his almsround. (This last alternative

apparently applies to the salt, sugar, oil, and ghee; people ordinarily would not be giving u
beans, or green gram for alms.) Only when these avenues fail should he ask from peop
unrelated to him and have not given an invitation to ask. Furthermore, he should ask for n
journey will require. None of the texts mention any permission for the bhikkhu, after h
has searched for the provisions, to store them longer than usual or to cook them in any wa
they expect him to arrange for an unordained person -- or people -- to accept the provision
responsible for their storage and preparation while on the road. Summary: Eating fine
after having asked for them for one's own sake -- except when ill -- is a pacittiya off

People were offended and annoyed and spread it about, 'How can this bhikkhu himself
offerings for the dead and eat them? He's robust, this bhikkhu. He's strong. Perhaps h
human flesh.'" Object. An //edible// is whatever is fit to eat, and includes all four
classes of food and medicine: staple and non-staple foods, juice drinks, the five tonics, an
Exceptions. //Water//, according to the Commentary, includes ice, hailstones, and sn
Whether such things as boiled water, bottled water, and man-made ice should also come u
exception is a controversial point, because such things are no longer in their natural state
instances carry a price. The texts offer no specific guidance here, so this is an area where
policy is to follow the dictates of one's Community. If one happens to belong to a Commun
one to take these items when they are not formally given, one should still be careful to ta
only when they are clearly intended for one's use or the Community's use in instances whe
price. //Tooth-cleaning sticks//, as used in the time of the Buddha, were semi-edible.
were sticks of soft wood, like balsam, cut four to eight inches long, chewed until they were
fiber and spat out. People in India still use tooth-cleaning sticks of this sort even today.
Here again there is a controversy as to whether toothpaste comes under this exception a
one hand it fits in with the pattern for tooth-cleaning sticks -- it is semi-edible and not inte
to be swallowed -- but on the other hand it contains substances, such as mineral salts, tha
classes as medicines (Mv.VI.8). This second consideration would seem to override the
is a question of following what is explicitly laid out in the Canon, rather than of applying the
Standards. Thus the wise policy would seem to be to regard it as a medicine that has to b
before it can be used, and not as coming under this exception. The act of giving food
edibles, as described in the Vibhanga, has three factors: 1) The donor (an unordained
standing within reach (one hatthapasa, or 1.25 meters) of the bhikkhu. 2) He/she give
with the body (e.g., the hand), with something in contact with the body (e.g., a spoon), o
of letting go. According to the Commentary, //letting go// means releasing from the

something in contact with the body -- e.g., dropping from the hand or a spoon -- and ref
cases as when a donor drops or tosses something into a bhikkhu's bowl or hands wi
or indirectly making contact. 3) The bhikkhu receives the item with the body or with somet
contact with the body (e.g., his bowl, a piece of cloth). There is a tradition in Thailand th
bhikkhu should never receive an offering from a woman hand-to-hand. Either she must
something in contact with her body (e.g., a tray) or the bhikkhu must accept it with someth
with his body: an alms bowl, a tray, a piece of cloth, etc. Apparently this tradition arose
means of protecting a sexually aroused bhikkhu from committing an offense under Sangha
the embarrassment that might arise if, say, yesterday he was not aroused and so could t
straight from her hand, while today he is and so can't. Many Thai eight-precept nuns, eve
don't have any precepts corresponding to Sanghadisesa 2, follow a reciprocal tradition of
anything hand-to-hand from a man. Neither of these traditions is mentioned in the Canon
commentaries, nor are they observed by Sri Lankan or Burmese bhikkhus or nuns. A
allowance in the Cullavagga (V.26) states that if food accidentally falls while being offered
may pick it up himself and eat it without committing an offense. Effort. If a bhikkhu re
that food is not given or improperly given, he incurs a dukkata if he takes it with the inter
eating it. As for the bhikkhu who thinks that it is properly given when it isn't, the Vibhanga
say whether he incurs a penalty in taking it with the intention of eating it or not. The Com
says explicitly that he doesn't. In either case, though, the Vibhanga states that the bhikkhu
pacittiya for every mouthful he eats. Thus perception is not a mitigating factor when deter
full offense under this rule. Non-offenses. There is an allowance (Mv.VI.17.8-9; Mv.VI.
in times of scarcity and famine a bhikkhu may pick up fallen fruit, take it to an unordained
place it on the ground, and have it formally "given" without committing an offense. At time
allowance is not in effect, though, a bhikkhu who -- with the intention of eating it -- picks u
edible he knows has not been given may not later make it allowable by formally "receiving
unordained person. Whether other bhikkhus may receive it and make use of it, though, is
point discussed in the Commentary in a treatise separate from its explanation of the Vibh
below). In the Mahavagga (VI.14.6), the Buddha gives permission for a bhikkhu bitte
to make an antidote of urine, excrement (burned in fire), ashes, and soil. If there is no unc
person present who can or will make these things allowable, the bhikkhu may take and p
himself, and then eat them without incurring a penalty under this rule. The Commentary a
cuts a tree under these circumstances to burn it, or digs the earth to get soil, he is exem
rules dealing with those actions as well. //Controversial points from the Commentary//.
mentioned above, the Commentary's discussion of this rule includes a treatise separate
explanation of the Vibhanga, dealing with controversial points for which the Canon gives u
or no answers at all. Since the treatise is a compilation of the opinions of various teache
does not pretend to explain the meaning or intent of the Buddha's words -- and since the B
bhikkhus against making up their own rules (NP 15.1.2) -- the opinions expressed in the

not necessarily normative. Many Communities do not accept them, or are selective in cho
they do and do not accept. Here we will give a summary of some of the Commentary's op
influenced practices found in some, if not all, Communities of bhikkhus at present. 1.
into the mouth is defined as going down the throat. As we have already noted under Paci
this definition has no justification in canonical usage. The Sub-commentary attempts to
Commentary's stand here by defining "mouth" (literally, the door of the face) as the larynx,
back door rather than the front door to the mouth, but again this is not supported by the
Sekhiya 41 -- "I will not open the door of my face when the mouthful has yet to be brought
decisively that this term refers to the lips and not to the larynx. "Taking into the mouth" th
taking in through the lips. 2. Food. Pond water so muddy that it leaves a scum on the
on the mouth is considered to be food, and so must be given before it can be drunk. The
with water into which so many leaves or flowers have fallen that their taste is discernible in
water. For some reason, though, water that has been scented with flowers need not be gi
is true with water taken from a stream or river no matter how muddy. (There is a belief
in India and other parts of Asia that flowing water is inherently clean.) Although leaves an
technically do count as edibles -- they are classed as non-staple foods or medicines, dep
one's purpose in eating them -- the idea of counting mud and scum as edibles seems to be
concept of edible a little too far. If toothwood is chewed for the sake of its juice, it mu
first be given. Even if one is chewing it for the sake of cleaning the teeth, but accidentall
swallows the juice, one has committed an offense all the same. These two opinions have
Canon, since intention is not a factor in determining the offense under this rule. A lo
section of this treatise discusses what to do if things that are not given get into food that ha
given. It concludes that they must either be removed from the food, or the food must be
If the items "not given" are edibles, this seems reasonable enough, but the Commentary e
to include such things as dust, dirty rain water, rust from a knife, beads of sweat droppin
one's brow, etc. Again, this seems to be taking the concept too far, for the Vibhanga state
the rule covers only those things generally considered as fit to eat. 3. Giving. The
Commentary redefines the act of giving, expanding its factors to five: (a) The item is s
a man of average stature can lift it. (b) The donor is within reach (1.25 m.) of the bhikkhu.
He/she makes a gesture of offering the food. (d) The donor is a celestial being, a human
common animal. (e) The bhikkhu receives the item with the body or with something
contact with the body. //Factor (a)// was included apparently to discourage the practice,
found in many places, of getting two or more men to present a table of food to a bhikkhu b
entire table at once. The inclusion of this factor, though, has given rise to the assumption
donor must lift the food a certain distance before handing it to the bhikkhu, but the Comm
shows that this assumption is mistaken, for it states that if a small novice too weak to lift
rice simply slides it along the table or floor onto a bhikkhu's hand, it is properly given.
//Factor (b)//: If any part of the donor's body (except for his/her extended arm) is within 1.2

of any part of the bhikkhu's body (except for his extended arm), this factor is fulfilled. If t
donor is standing beyond reach, the bhikkhu should tell him/her to come within reach befo
food. If for some reason the donor does not comply with the bhikkhu's request, the bhikl
accept the food, but should then take it to another unordained person -- without setting it d
picking it up again in the meantime (see below) -- and have it properly "given" before eatin
Although the donor must be within reach, the food itself need not be. Thus if the donor p
vessels on a mat while the bhikkhu touches the mat with the intention of receiving them, a
food is considered to be properly received as long as the donor is within reach of the bhikk
holds true if the donor places many vessels touching one another while the bhikkhu touche
vessels with the intention of receiving them all. (The factor of the bhikkhu's intention is dis
further under factor (e) below.) //Factor (c)// means that the donor cannot simply tell
bhikkhu to take the food being given. Rather, he/she should make a physical gesture of
food. In some places, this factor is interpreted as meaning that the donor must assume a
respectful manner while making the offering, and has led some to believe, for instance, tha
going barefoot on his alms round should not accept food from a donor wearing shoes. Thi
supported by the Commentary. Although some of the gestures it cites as examples, such
head, might be interpreted as showing respect, some of them are not respectful in terms o
etiquette at all. For instance, a person riding on the bhikkhu's shoulders picks a piece of fr
tree, drops it into his hands, and it is considered properly given. The question arises a
much of a gesture is necessary for this factor to be fulfilled. In the West, if a donor brings
of food and stands in front of a bhikkhu, waiting for him to take some of the food, the fact t
stands there waiting would be considered enough of a gesture to show that the food is bei
the bhikkhu were to demand more of a gesture than that, the donor would probably be offe
we have noted, the opinions expressed in this section of the Commentary are not necessa
this is an area where one can make allowances for cultural norms. The essence of this fa
to be that a bhikkhu should not snatch food that a person happens to be carrying past hi
showing any indication that he/she wants him to take the food. //Factor (d)// is not dis
by the Commentary, although it is probably inspired by such stories as that of elephants o
lotus stalks to Ven. Moggallana, and of Sakka, the king of the deities, presenting a gift of f
Kassapa after the latter had withdrawn from seven days of concentration. There is at leas
bhikkhu in Thailand today who has trained a pet monkey to "give" him things. //Facto
The effort involved in receiving the item may be minimal indeed. In fact, the Commentary'
the Vibhanga quotes the Mahapaccari, one of the ancient Sinhalese commentaries, as s
attention is the measure determining whether or not food has been received. Thus if a do
by placing it on a table, the bhikkhu may simply touch the table with his finger, thinking, "
receiving the food," and it is properly given. The same holds true if he is sitting on the tab
lying on a bed and regards the act of sitting or lying there as one of receiving whatever is p
However, immovable objects -- such as a floor, the ground, or anything fixed to the floor

-- may not be used as "items connected to the body" to receive food in this way. Foo
a bhikkhu's hand when he is asleep or his attention is elsewhere, e.g., in deep meditation,
as properly given. He must be awake and paying enough attention to know that the food
for this factor to be fulfilled. Food placed in a bhikkhu's mouth is considered properly given
awake. If he is asleep or unconscious and food is put into his stomach via a feeding tub
broken this rule for he is not the agent putting it there, and as the Sub-commentary notes
Sanghadisesa 1, the Vinaya does not apply to a bhikkhu when he is not in a normal, wakin
awareness. 4. Taking food that has not been given. To take food knowing that it has
improperly given or not given at all (here we are not talking about cases of stealing) is no o
the bhikkhu has no intention of eating it. If, after he has set it down, the food is later "giv
him, he may accept and eat it with no penalty. Here the examples given in the Commenta
things as picking up fallen fruit or the remains of a lion's kill with the thought of taking the
a novice to eat, or picking up oil or ghee with the thought of taking it to one's parents. A co
example at present would be picking up food left lying around when one is cleaning up the
Sub-commentary states that this allowance does not hold if one is thinking of taking the fo
other bhikkhus to eat. To take food with the purpose of eating it, thinking that it has be
properly given when in fact it hasn't, is also no offense. If one then learns or realizes that
been properly given, one should return it -- if possible, to its original place -- without setti
down and picking it up again in the meantime. Once the food is back in its original place,
"receive" and eat it with no penalty. If one sets it down and picks it up again before retur
to its original place, though, then technically one incurs a dukkata for taking food that one
not properly given, and so one may not later formally receive the food, as mentioned abo
some reason there is no possibility of returning the food to its original place, one need only
to some other spot in the building from which it was taken and then "receive" and eat it w
committing an offense. To take food with the purpose of eating it, knowing that it has
properly given, entails a dukkata, as stated in the Vibhanga. According to the Commentar
"taking" here also includes deliberately touching the food or the vessel containing it with
intention of eating it. (Touching it accidentally it carries no penalty.) If a bhikkhu deliberate
touches it in this way, he may not then properly receive it, although other bhikkhus may. O
received it, the first bhikkhu may not eat any of it. If the first bhikkhu, instead of mere
touching the food or its vessel, actually moves it from its place, then neither he nor any of
other bhikkhus may receive it. Thus if a donor brings a pot of stew to the monastery, and
bhikkhus, curious to see what is going to be offered that day, tilts the pot to peek inside, no
the bhikkhus may eat the food, and the donor must either give it to the novices and any att
monastery, if there are any, throw it to the dogs, or take it home. Many Communities
accept the Commentary's opinions on this point, and with good reason: The last-mentione
though the offense is a dukkata -- is stronger than that imposed by any of the nissaggiya
rules, and penalizes perfectly innocent people: the other bhikkhus and the donor of the fo

An alternate opinion, which many Communities follow, is that if a bhikkhu takes -- with the eating it -- food that he knows has not been properly offered, he may not then formally re from an unordained person, but other bhikkhus may. Once it has been properly received, including the first -- may eat from it. This is an area in which none of the texts gives a authoritative answer, and a wise policy is to adhere to the views of the Community in wh living, as long as they fit into the framework provided by the Canon. 5. When food be "ungiven." The Commentary to Parajika 1, in its discussion of what to do when a bhikkhu's spontaneously (!), lists seven instances in which an edible given to a bhikkhu becomes "un no bhikkhu may pick it up and eat it until it is formally given again. The seven are -- (a original recipient undergoes a spontaneous sex change. (b) He dies. (c) He disrobes an lay person. (d) He becomes a low person. (According to the Sub-commentary, this m commits a parajika.) (e) He gives it to an unordained person. (f) He abandons it, having interest in it. (g) The item is stolen. (The Sub-commentary, in discussing this last poi refers solely to cases of out-and-out thievery, and not to the mere act of touching or mo Of these seven instances, the treatise we are discussing deals with only two -- (e) and (f) series of examples, as follows: A bhikkhu with rice in his hand offers it to a novice: The remains "given" until the novice takes it. A bhikkhu places food in a vessel and, no lo interested in it, tells a novice to take it: The food is "ungiven" as soon as he says th This point, however, does not apply to food the bhikkhu leaves in his own bowl or in any vessel from which the bhikkhus are served or in which their food is prepared. If he food in such a vessel, he is not regarded as having abandoned interest in it. A bhi sets his bowl on a stand and tells a novice to take some rice from it. Assuming that the hand is clean -- i.e., not "contaminated" with any food from his own bowl that might the bhikkhu's bowl -- the rice remaining in the bhikkhu's bowl after the novice has taken is still "given." Technically speaking, the treatise says, the rice taken by the novice belongs to the bhikkhu until the novice puts it in his own bowl. Thus if the novice begins second handful and, being told by the bhikkhu, "That's enough," puts the second ha in the bhikkhu's bowl; or if any grains of rice from the first handful happen to fall back int bhikkhu's bowl while the novice is lifting it out, all the rice in the bhikkhu's bowl is still "given." A bhikkhu holding a stick of sugar cane tells a novice to cut off a piece fro other end: The remaining section is still "given." A bhikkhu places pieces of harde molasses on a tray and tells other bhikkhus and novices to help themselves from the tra the bhikkhus and novices simply pick up their portions and take them, the remaining ha is still "given." If, though, a novice picks up one piece, puts it down, picks up anoth piece, puts it down, and so on, the hardened molasses remaining on the tray becomes The Sub-commentary explains this by saying that the novice picking up the molasses is th mine. I'll take it," then changes his mind, puts it down and then lays claim to another piece on. Thus, only the pieces that the novice claims and then abandons in this way become "u

other pieces on the tray still count as "given." This last example, when taken out of c
has led to the widespread view that food given to a bhikkhu becomes "ungiven" if an unc
touches or moves it. Viewed in context, though, the example does not imply this at all. Th
offered the hardened molasses to the novice, and the novice in picking it up simply comp
factors for case (e): "The bhikkhu gives the item to an unordained person." The example o
taking rice from a bhikkhu's bowl shows that even when a bhikkhu offers food to an unor
the mere fact that the person touches or moves the food does not necessarily make the fo
Thus in cases where the bhikkhu is not giving away the food and has not abandoned in
and the unordained person is not stealing it -- there is no reason to hold that "given" food b
"ungiven" simply when an unordained person touches or moves it. This is another area, th
different Communities hold different views, and where the wise policy is to conform to the
of the Community in which one is living. These points from the Commentary's treatise
a lot of hair-splitting, but remember that the gift of food ranks with sexual temptation as o
largest issues in a bhikkhu's -- or anyone's -- life. If questions of this sort hadn't arisen in
practice, no one would have bothered to compile the treatise in the first place. Given the c
in which the Vibhanga treats this rule, and given the large "gray" areas surrounding the ac
-- modern anthropology started with this subject and will probably never finish with it -- it's
have those areas spelled out in detail so as to minimize any disharmony that might arise
Community when its members find themselves in gray situations. Still, as we have no
times, the guidelines in the Commentary's treatise are not binding, and the wise policy is to
the standards of the Community in which one is living, as long as they fall within the frame
Canon. Summary: Eating food that has not been formally given is a pacittiya offen

under Pacittiya 2. The offenses here are as follows: a dukkata for speaking the w
dismissal; a dukkata when the other bhikkhu is leaving the range of hearing and sight
a pacittiya when he has left. Non-offenses. According to the Vibhanga, there is no offen
dismissing one's companion with the thought that two bhikkhus going together won't c
food; dismissing him after seeing costly goods ahead, so that he won't develop a
of greed; dismissing him after seeing a beautiful woman ahead, so that he won't lo
resolve for the celibate life; sending him back with food for a sick bhikkhu or lay worke
monastery; or dismissing him for any other proper reason, as long as one is not
planning to indulge in misconduct. Summary: When on almsround with another bhikkh
him back so that he won't witness any misconduct one is planning to indulge in is a pa
offense. * * * 43.Should a bhikkhu sit
intruding on a family "with its meal," it is to be confessed. The origin story here, briefl
is this: Ven. Upananda visits a woman in her private quarters. Her husband approaches h
respectfully, has his wife give him alms, and then asks him to leave. The wife senses that
wants to have sexual intercourse with her and so -- as a game, apparently -- keeps deta
Upananda until the husband gets exasperated and goes to complain to the bhikkhus: "Sir
Upananda is sitting in the bedroom with my wife. I have dismissed him, but he isn't willin
We are very busy and have much work to do." Object: A family "with its meal." The Vin
tries to take this phrase literally, but the Vibhanga explains it as a euphemism meaning "
woman together, both not having gone out (of their bedroom), not both without lust" -- in o

man and woman together in their private quarters, with at least one of them desiring sex
intercourse with the other. Although the Commentary tries to justify the Vibhanga's explan
etymologically (//bhoga//, the root form of meal, has other forms meaning enjoyment, ind
use), there is no need to turn to etymology. Since ancient times in all cultures, eating has
commonly used as a metaphor for sex. Effort. To //sit intruding// means to sit in the pr
of the house, this being defined in terms of how large the house is. In one large enough
separate bedroom, the private area is the bedroom plus a radius of one hatthapasa (1.25 m
the bedroom doorway. In a smaller house, the private area is the back half of the house.
texts discuss such things as one-room apartments or hotel rooms, but these would probab
as "separate bedrooms." The Vibhanga states that perception with regard to the privat
not a mitigating factor here, and apparently the same holds true for perception with regard
not the couple is "at its meal." As for intention, the Parivara and commentaries maintain
//is// a factor, but the Vibhanga does not mention it at all. Thus, to be perfectly safe from a
in cases like this, a bhikkhu should not sit intruding on a couple unless they both make h
certain that he is welcome: a wise policy in any case, whether or not one is a bhikkhu.
of sitting with a woman alone in her bedroom -- or any other private place -- are covered b
rule. Non-offenses. There is no offense -- if both the man and woman have left th
bedroom/private area; if neither of them is sexually aroused; if the bhikkhu is not in the
area; or if he has a second bhikkhu as his companion. Summary: To sit down intru
man and a woman in their private quarters -- when one or both are sexually arouse
another bhikkhu is not present -- is a pacittiya offense.

* * *

44. Should any bhikkhu sit in private on a secluded
seat with a woman, it is to be confessed. There are three factors for the offense here
1) //Object//: a female human being, "even one born that very day, all the more an olde
2) //Effort//: One sits with her in a private, secluded seat, without another man present.
//Intention//: One is aiming at privacy. Object. //Woman// here includes //women// as wo
other words, even if one is sitting with many women in the secluded area, one is not exe
factor. A female human being is grounds for a pacittiya; a pandaka (see Sanghadise
details), a female peta, a female yakkha, and an animal in the form of a woman, grounds f
Perception is not a factor here. If one is sitting with a woman, even if one thinks she is
or something else, this factor is fulfilled. Effort. //To sit// also includes lying down.
Whether the bhikkhu sits near the woman when she is already seated, or the woman sits
is already seated, or both sit down at the same time, makes no difference. //Private
private to the eye and private to the ear. Two people sitting in a place private to the eye m
one else can see if they wink, raise their eyebrows, or nod. If they are in a place private
ear, no one else can hear what they say in an normal voice. A //secluded seat// is o
a wall, a closed door, a large bush or anything at all that would afford them enough privacy
the sexual act. According to the Commentary, //private to the eye// is the essential fa

here. Even if a man is within hearing but not within sight -- i.e., he is sitting just outside the to the private place -- that does not exempt one from the offense here. The Commen further that the presence of a man within sight absolves one from this factor only if he is kn enough to know what is and is not lewd, if he is awake, and if he is not blind or deaf. Ev distracted or drowsy man, though, if he meets these criteria, //would// absolve one from th Intention. The Commentary explains //aiming at privacy// as being motivated by any d related to sex, but this explanation opens as many questions as it tries to resolve. Does it solely to the desire for intercourse, or to other more subtle sexually-related desires? Unfo none of the commentaries say. A passage in the Anguttara Nikaya (A.VII.47), though, offe here: It refers to a priest or contemplative who observes the celibate life by not engaging i intercourse, but whose celibacy is "broken, cracked, spotted, and blemished" by the joy he any one of the following activities: 1) He consents to being rubbed down, bathed, and m woman. 2) He jokes, plays, and amuses himself with a woman. 3) He stares into a 4) He listens to the voices of women outside his wall as they laugh, speak, sing, or cr He recollects how he used to laugh, converse, and play with a woman. 6) He sees a householder's son enjoying himself endowed with the five sensual pleasures. 7) He p celibate life intent on being born in one or another of the heavenly hosts, (thinking) "By t or practice or abstinence or celibate life I will be a god of one sort or another.

The joy a person finds in any of this things is termed a sexual fetter (//methuna-sanyoga//) him from gaining release from birth, ageing and death, and from the entire round of suffe Commentary is indeed referring to this sort of thing when it mentions "defilements related t (//methuna-nissita-kilesa//), then the factor of intention under this rule would be fulfilled by things as wanting to joke with the woman, to stare into her eyes, or to enjoy hearing her vo talks or laughs. Although a bhikkhu may be convinced that he has no such motives in private with a particular woman, he should remember that this is one of the training rules w opinion makes its claims. Aniyata 1 requires that if a trustworthy outside witness is susp bhikkhu's sitting alone with a woman -- and unless he is sitting with his mother or other eld relative, it's rare that outsiders won't be suspicious -- the Community must meet to inves issue. Even though they may find him innocent of any wrong-doing, the fact that they have investigate his behavior is usually enough to keep suspicions alive among the laity, and resentment among his fellow bhikkhus over the waste of their time due to his indiscretion.

The Vinaya Mukha avoids these problems by taking an entirely different approach to the f intention here. It defines "not aiming at privacy" with the following illustration: A bhikkhu is sitting in a secluded place with a man and woman present, but the man gets up and leave bhikkhu can stop him. In other words, the bhikkhu is not intending to sit alone in private w woman at all, but circumstances beyond his control force him to. There is nothing in th to decide conclusively between these two interpretations. However, both the Canon and t give frequent warnings about the dangers that can arise when a bhikkhu sits alone with a

is not ill may accept (make use of) a four-month invitation to ask for requisites. If he sho
accept (make use of) it for longer than that -- unless the invitation is renewed or is perm
it is to be confessed. Object. An invitation to ask for requisites is an offer, made by a
lay person, to supply a bhikkhu with requisites whenever he (the bhikkhu) asks for them. S
may be made either to individual bhikkhus, to groups, or to entire Communities. The res
incumbent on the two sides in such an arrangement are well-illustrated in a passage from

to this rule. "'Now at that time some group-of-six bhikkhus wore their lower robes improperly, their upper robes improperly, and were not at all consummate in their depor Mahanama the Sakyan criticized them: 'Sirs, why do you wear your lower robes im upper robes improperly, and why are you not at all consummate in your deportment? S person who has gone forth wear his lower robe properly, his upper robe properly, and b his deportment?' "The group-of-six bhikkhus nursed a grudge against him. thought, 'Now how can we embarrass Mahanama the Sakyan?' Then it occurred to the He has made an invitation to provide the Community with medicines. Let's ask him "So they went to where Mahanama the Sakyan was staying, and on arrival said have need of a tubful of ghee, my friend.' "'Please wait for a day, sirs. People h just gone to the cattle pen to get ghee. You may come and fetch it in the morning.' A second time...A third time, they said to him, 'We have need of a tubful of ghee, my "'Please wait for a day, sirs. People have just gone to the cattle pen to get ghee. may come and fetch it in the morning.' "'Did you make the invitation not desiring give, in that having made the invitation you don't give?' "So Mahanama the Sak offended and annoyed and spread it about, 'How can revered ones, being told, "Please a day, sirs," not wait?'" As the story shows, the person making the invitation was expect provide the goods he offered, while bhikkhus were expected to be reasonable in their requ The Vibhanga and Commentary, taken together, show that this rule covers invitations mad provide them with medicines. The rule and origin stories show that at first invitations of t had three standard forms: a four-month invitation (each of the major seasons in India lasts which may have been the reason for this type of invitation), a renewed four-month invitat permanent invitation. Eventually, though, the Vibhanga worked out the following fourfold covering invitations of a wide variety of sorts: those that specify (1) requisites (medicines) time period, (3) both, or (4) neither. (1) An invitation specifying requisites may specif merely the type of item offered -- "Let me know if you ever need any honey or sugar" -- o amount -- "Let me know if you ever need a bottle of honey...a pound of sugar." In cases li bhikkhu may ask for the type or amount of the item that has been offered. If he asks for or for more of the proper item than the amount offered, if that too is specified, he incurs a p However, since the donor mentions no time limit, the Vibhanga says that the bhikkhu ma time. (2) An invitation specifying the time period may be phrased, for example, "Let if you need any medicine during this Rains Retreat." In cases like this, a bhikkhu may ask or amount of medicine during that time period. But as the origin stories to this and the o dealing with asking make clear, (see Sanghadisesa 6 and NP 6 & 7), he should be modera reasonable when making requests, and not abuse the lay supporter's generosity. If, not b after the period has expired, he incurs a pacittiya. (3) An invitation specifying requisi and the time period might be phrased, "Let me know if you need any honey during the Rai In cases like this, a bhikkhu incurs a pacittiya if he asks for items other than those offered

more of the proper item than the amount offered, if that too is specified -- whether or not during the specified time period. He also incurs a pacittiya if, not being ill, he asks for the offered after the time period has expired. (4) An invitation specifying neither requisit the time period may be phrased, for example, "Let me know if you ever need any medici like this, the bhikkhu may ask for any medicine at any time. As in case (2), though, he sho reasonable in his requests. Effort. A bhikkhu who asks for medicine outside of the ty medicine or time period specified in the invitation incurs a pacittiya in the asking, regardle whether or not he is given what he asks for. If he asks for medicine, making use of an in do so, but then uses it for a non-medicinal purpose -- e.g, he asks for honey and then has make a desert with it -- he incurs a pacittiya as well. Perception is not a mitigating fa here. If the time period has expired, and he asks assuming that it hasn't, he commits the offense all the same. Non-offenses. Three of the no-offense clauses require no specia explanation: There is no offense in asking from relatives, for the sake of another, or for m bought with one's own resources. One of the two no-offense clauses requiring expla that there is no offense in asking from those who have made an invitation. This the Com explains by saying that if one has received a personal invitation, one may ask in line with i but that otherwise the limits set by this rule apply only to invitations made to an entire Com not to those made on a personal basis to individual bhikkhus. Although the Vibhanga mak mention of this point, it is the only way to make sense of this no-offense clause and the rel between this rule and Pacittiya 39. Under that rule, a bhikkhu who is not ill and has not invited incurs a dukkata in asking for any one of the five tonics, and there seems no reaso heavier penalty for requesting one of the five tonics after a personal invitation to do so ha expired. If, though, the invitation referred to in this rule is one made to an entire Communi heavier penalty makes sense as an added protection to the donor against having his/her abused by the less conscientious members of the Community. This added protection wou encouraging further invitations of this sort in the future. The second no-offense claus requiring explanation is the one for an ill bhikkhu. Reading the rule, one would imagine th exemption for an ill bhikkhu would read simply, "There is no offense if one is ill," but instea "There is no offense if one says, "The time period for which we were invited has passed, b need of medicine." This is an important point of etiquette. Normally, an ill bhikkhu may a medicine at anytime, but in dealing with a person who has made an invitation for medicine Community, he has to show special consideration. In mentioning the fact that the time per invitation has expired, he gives recognition of the fact that the donor is no longer under an obligation to provide the medicine, thus giving the donor a convenient "out" in case he/she provide it. This simple gesture is the least consideration that can be shown to someone the generosity to invite the Community to ask for medicines. And again, simple gestures c to protect donors and encourage similar invitations again in the future. An alternati interpretation. The Vinaya Mukha tries to extend this rule to cover invitations of every sort

and communal, dealing with any sort of requisite. It also reads the training rule to mean time limit is not specified on an invitation, a four-month time limit is to be assumed. All of t has no support in the Vibhanga, and so is not binding, but the last point is something that i bhikkhus may adopt as a personal policy to teach themselves moderation in their requests faith and financial position can change quickly, and it is reasonable not to depend on an in longer periods of time unless the donor makes it clear that he/she is still willing to provid item offered in the first place. Summary: When a supporter has made an offer to supp medicines to the Community: Asking him/her for medicine outside the terms of the offe not ill, or for medicine to use for a non-medicinal purpose, is a pacittiya offense.

* * * 48. Should any bhikkhu go to see an army on active duty, unless there is a suitable reason, it is to be confessed. Object. An army time of the Buddha was a very different affair from what an army is now. We will start with of how the Vibhanga explains this factor in terms of armies at that time, and then follow discussion of how it may be applied to armies at present. Armies in those times consis of what we would call reserve units. These were organized into four divisions: elephant cavalry units, chariot units, and infantry units. The soldiers for the most part were citizens live at home until called up on active duty to engage in actual warfare or to practice man activities that always took place outside the city. Battles, both actual and practice, were fo according to rules -- total warfare is a modern invention -- and it was possible for non-mi citizens to watch, with occasional danger to live and limb, much as people at present watc games. (Going to a battlefield is listed in the Brahmajala Suttanta as a form of entertain With this information in mind, it is easy to understand the Vibhanga's treatment of this r army on active duty -- composed of a full panoply of elephant, cavalry, chariot, and infan who have left the city -- is grounds for a pacittiya. Any segment of an army on duty -- ever archer, says the Commentary -- is grounds for a dukkata. An army not on duty -- the Co illustrates this with a king's pleasure trip -- is not grounds for an offense. To apply the definitions to armed forces at present: The Vibhanga's definition for army comes close to definition of a field army with a full array of artillery, armored, airborne, and infantry divisi Navies, marines, and air forces did not exist at that time, but the Great Standards would al extend the definition of //army// to cover similar large units of these branches of the milita well. Since armies on active duty no longer limit their activities to areas outside of cities -- sometimes based in cities, run practice drills there, and can be called in to quell riots or f enemy forces there -- the definition of "on active duty" must be changed to fit the way armi at present. Thus soldiers at work on base or off would count as being on duty, and the on armed bases that would not be grounds for an offense here would be the areas where offi are housed. With these points in mind, we may say that a full field army -- or the equ in naval, marine, or air forces -- on active duty would be grounds for a pacittiya here. Any of the military on active duty -- a regiment, a division, or even one armed soldier -- would

grounds for a dukkata. Armies not on active duty, as when they organize charity affairs, w
grounds for an offense. Effort. This factor is fulfilled simply by standing and watching
an army on duty except when one has a suitable reason. The Vibhanga gives a dukkata f
makes in going to watch an army on duty, and a pacittiya for standing and watching.
origin story's example of a suitable reason is that a bhikkhu's uncle in the army had fallen
wished to see him. Other suitable reasons would include accepting an invitation from th
receive alms or to give a talk. Non-offenses. There is no offense -- if, having go
on business, one sees the army; if, standing within a monastery, one watches an army fig
holding practice maneuvers nearby; if an army comes to where one happens to be; if o
coming from the opposite direction; or if there are dangers. The Commentary interprets t
as referring to dangers to one's life or celibacy that one hopes to escape by taking s
with the army. Summary: Watching a field army -- or similar large military force --
active duty, unless there is a suitable reason, is a pacittiya offense.

* * * 49.There being some reason or another for a bhikkhu to go to an
army, he may stay two or three (consecutive) nights with the army. If he should stay lon
that, it is to be confessed. Object. None of the texts say explicitly whether this rule
applies only to armies on active duty, or to armies off duty as well, but since this and the
rule are continuations of the preceding one, they would seem to apply only to armies on ac
this rule does not apply to the housing where military officers live with their families, whe
base or off. Effort. As under Pacittiya 5 -- the rule that deals with sleeping in the same
lodging with an unordained person -- nights here are counted by dawns. If a bhikkhu leave
before dawn of any night, that night is not counted. If he returns to spend another night/
the army, the series starts over again from one. If, however, he has spent three consecuti
the army and is still with the army at any time beginning with sunset of the fourth night, h
pacittiya. Unlike Pacittiya 5, he does not need to be lying down for this factor to count. Th
Commentary illustrates this point by saying that even if he is using his psychic power to
levitating above the army at sunset on the fourth day, he still fulfills this factor.
Perception is not a mitigating factor here. Even if one miscounts the nights, one is not exe
offense. Non-offenses. There is no offense in staying longer than three consecutive
if one spends another night somewhere else in the meantime; if one is ill or caring for s
else who is ill; if the army is surrounded by opposing forces; if one is being held captive
if there are other dangers. Summary: Staying more than three consecutive nights with
army on active duty, unless one has a suitable reason to be there, is a pacittiya offense

* * * 50. If a bhikkhu staying two or three nights with
an army should go to a battlefield, a roll call, the troops in battle formation, or to see
review of the (battle) units, it is to be confessed. "Then a certain bhikkhu of the gro
of six, having gone to the battlefield, was pierced by an arrow. People made fun of
hope it was a good battle, venerable sir. How many points did you get?'" A //battlef

according to the Vibhanga and Commentary here, is a place where actual fighting may be the Commentary to the Brahmajala Suttanta, it is a place where war games are held. Bo interpretations seem valid, especially considering the organized and decorous nature of w days. The Commentary also says that a //review of battle units// can mean anything review of a single unit. //Roll call// and //troops in battle formation// are self-explanatory. The Brahmajala Suttanta mentions all four of these activities as fo entertainment. From this, using the Great Standards, we may say that any show the arme the public -- parades, air shows, etc. -- would fall under this factor as well. Notice tha these activities fulfill this factor even if they do not include the full array of forces that one w find in a field army or similar large military unit. In other words, a bhikkhu staying with th would incur the full penalty here for watching these activities even if they involve only a sm of a single division. If he is not staying with the army, though, then under Pacittiya 48 he incur a pacittiya for watching these activities only if they contain the full complement of arti armored, airborne, and infantry forces; and a dukkata if they contain only a segment.
As with Pacittiya 48, there is a dukkata for every step one takes towards watching these a pacittiya for standing and watching them. Non-offenses. The Vibhanga's no-offense are identical with those for Pacittiya 48. In other words, there is no offense: if, havin gone on business, one happens to see any of these activities; if, standing within a mo one watches these activities; if an army comes to where one happens to be; if one mee coming from the opposite direction; or if there are dangers. Summary: Going to a ba a roll call, an array of troops in battle formation, or to see a review of the battle units while one is staying with an army is a pacittiya offense. * * * *
* * * *

CHAPTER EIGHT

Part Six: The Alcoholic Drink Chapter

~~~
~~~

Canon repeatedly criticizes alcohol on the grounds that it destroys one's sense of shame, discernment and can put one into a stupor -- as happened to Ven. Sagata -- it seems reas extend this rule to other intoxicants, narcotics, and hallucinogens as well. Thus things like hashish, heroin, cocaine, and LSD would fulfill this factor. Coffee, tea, tobacco, and betel have this effect, though, so there is no reason to include them here. Items that look, and taste like alcohol but are non-alcoholic also do not come under this rule. Thus, for exa carbonated apple juice that resembles champagne would not fulfill this factor. Percep not a mitigating factor under this rule. A bhikkhu drinking champagne that he thinks to be apple juice //would// fall under this factor, regardless of his ignorance. Effort. The Vibhanga defines //drinking// as taking even as little as the tip of a blade of grass. Thus ta small glass of wine, even though it might not be enough to make one drunk, would be m to fulfill this factor. According to the Commentary, the number of offenses involved in an alcoholic drink is determined by the number of separate sips. As for intoxicants taken b than sipping, each separate effort would count as an offense. Non-offenses. The Vib states that there is no offense in taking alcohol "mixed in broth, meat, or oil." The Comme interprets the first two items as referring to sauces, stews, and meat dishes to which alcoh beverages, such as wine, are added for flavoring before they are cooked. Since the alcoh evaporate during the cooking, it would have no intoxicating effect. Foods containing uneva -- such as rum babas -- would not be included under this allowance. As for alcohol m oil, this refers to a medicine used in the Buddha's time for afflictions of the "wind element." Mahavagga (VI.14.1) allows this medicine for use only as long as the taste, color, and sm alcohol are not perceptible. From this point, the Vinaya Mukha argues that morphine and used as pain killers are allowable as well. In addition, the Vibhanga states that there i offense in taking alcohol in molasses and embric myrobalan -- none of the texts explain means -- or in taking fermented medicines that are non-alcoholic, but whose color, taste, o alcohol. Summary: Taking an intoxicant is a pacittiya offense regardless of whethe aware or not that it is an intoxicant.

* * *

52. Tickling with the fingers is to be confessed. "Now at that time some group-of-six bhikkhus were making the group of 17 laugh by tickling him with their fingers. Convulsed with laughter and una his breath, he died." There are three factors for the full offense here. 1) //Object// another bhikkhu. 2) //Effort//: One touches any part of his body with any part of one body 3) //Intention//: in order to to make him laugh. Object. A bhikkhu is grounds for pacittiya here; any unordained person, grounds for a dukkata. The Commentary notes tha bhikkhuni counts as an unordained person in the context of this rule, so a bhikkhu looking fun can tickle one without incurring a penalty stronger than a dukkata. There are occasion at humor in the Commentary, and we can probably write this off as one of them. Effo factor is fulfilled only by body-to-body contact, as defined at length under Sanghadisesa 2.

following actions, if done with the intent of making the other person laugh, would be grou
dukkata here regardless of whether the person was ordained or not: using an item con
the body -- such as a stick -- to poke at the person; touching an item connected with t
person's body; tossing or dropping things on the other person. Intention. If one has
for touching the other person aside from wanting to make him laugh, there is no penalty in
Thus a bhikkhu massaging another bhikkhu's tired back commits no offense if he inadverte
touch a spot where the other bhikkhu is ticklish. "Result" is not a factor here. If one tic
another bhikkhu with the thought of making him laugh, one commits the full offense rega
whether he actually laughs or not. Summary: Tickling another bhikkhu is a pacittiya off

* * * 53. The act of playing in the water is to be confessed. Here again, the
factors for the full offense are three. 1) //Effort//: One jumps up or down, splashes or sw
2) //Object//: in water deep enough to immerse one's ankle 3) //Intention//: for fun.
Effort. According to the Commentary, each individual effort counts as a separate offense.
swimming for fun, one incurs a pacittiya for each hand or foot stroke. Object. Jump
or down in water less than ankle deep entails a dukkata, as does splashing water with the
stick, or a piece of tile; playing with water in a tumbler or a bowl; or playing with such thin
sour gruel, milk, buttermilk, colored dyes, urine, or mud. The Vibhanga states that th
also a dukkata for playing in a boat. This the Commentary defines as paddling a boat with
propelling it with a pole or pushing it up on shore. Intention. The Vibhanga defines this
as "for a laugh," which the Commentary translates as "for fun" or "for sport" (//kiladhippa
The question of swimming for fitness or exercise does not come up in any of the texts
to have been virtually unheard of in Asia until recent times. Swimming in most Asian coun
been regarded as a childish form of play, and the one mention in the Canon of athletic bh
their bodies in strong shape is disparaging: In the origin story to Sanghadisesa 8, Ven. Da
Mallaputta assigned separate lodgings to different groups of bhikkhus -- those who studied
those who studied the Vinaya, those who meditated, etc. -- and, finally, "for those bhikkh
indulging in animal talk and keeping their bodies in strong shape, he assigned lodgings in
'So that even these venerable ones will live as they like.'" Thus it does not seem likely th
Buddha would have recognized physical fitness as an appropriate reason for bhikkhus to g
On the other hand, if a bhikkhu has a medical reason for swimming -- e.g., he has injure
shoulder, and his doctor has recommended that he swim to help speed its healing -- this w
count as an instance of "having business to do in the water" and thus would come under
no-offense clause. Non-offenses. The Vibhanga states that there is no offense in jump
out of the water, swimming or using a boat -- if one goes into the water not for fun but b
has business to do -- examples would include bathing or helping a person who can
if one is crossing to the other shore of a body of water; or if there are dangers -- e.g., one
escaping a fire or a wild beast. Summary: Jumping and swimming in the water fo

pacittiya offense. * * * 54. Disrespect is
to be confessed. This rule refers to cases where one has been admonished for one's be
factors for the full offense are two. 1) //Object//: One has been admonished by a fellow b
cites a rule formulated in the Vinaya. 2) //Effort//: One shows disrespect for the bhikk
for the rule. Object. Only if the bhikkhu cites a rule in the Vinaya is this factor
grounds for a pacittiya. If he criticizes one's actions, citing standards of behavior outside o
Vinaya -- e.g., he says that one has been insensitive, out of touch with modern attitudes,
-- this factor becomes grounds for a dukkata. If the person admonishing one is not a bh
regardless of whether he/she cites a rule in the Vinaya or standards of behavior outside
Vinaya, it is grounds for a dukkata. Whether or not one views the admonition as valid i
issue here. Even if the other person is really an ignorant fool, has misinterpreted the rul
cited some standard of behavior having absolutely nothing to do with Buddhist practice, or
careful not to show disrespect in word or deed. Effort. There are two possible target
one's disrespect -- the person and the rule -- and two ways of showing it: by word or by
//Disrespect for the person// includes -- saying things that show disrespect in either a
or subtle way, e.g., "Who are //you// to tell //me//?" "It's presumptuous of you to pas
judgment when you aren't in my position," "Your critical attitude shows that you have so
emotional problems that you would be well-advised to look into," "Get lost!" or "Go t
or making a rude gesture or even a slight facial expression to show one's contemp
//Disrespect for the rule// includes -- saying, "That's a stupid rule," "That rule doesn't app
me;" stubbornly repeating the action for which one was admonished (this point is c
Mv.IV,17.1-9); or making a rude gesture, saying, "This is what I think of that rule."
Further action. If one persists in acting disrespectfully when being admonished, one may
subject to Sanghadisesa 12 or to a formal act of suspension. Non-offenses. There is
if, being admonished, one states simply that one was taught differently by one's teachers.
the Dhammapada (verse 76) says, one should regard a person who points out one's faults
points out hidden treasure. If one shows disrespect to such a guide, it is unlikely that he/s
feel inclined to point out any hidden treasure ever again. A good example of how to rec
admonishment was set by Ven. Ananda during the First Council (Cv.XI.1.10). Although he
for committing acts that the Buddha had not declared to be offenses, and although he did
had committed any error, still he willingly confessed his actions as offenses so as to sho
in his fellow bhikkhus. Summary: Speaking or acting disrespectfully when being
admonished by another bhikkhu for a breach of the training rules is a pacittiya offense.
* * * 55. Should any bhikkhu try to frighten another bhikkhu, it
is to be confessed. There are three factors for the full offense here. Intention. One
wants to frighten the other person. Effort. One arranges a frightening sight -- such as
sheet in a dark room so that it looks like a ghost; makes a frightening sound, etc.; or des
dangers from ghosts, robbers, or wild animals. Object. The other person is a bhikkh

who is not a bhikkhu is grounds for a dukkata. "Result" is not a factor here. If the thr
factors are fulfilled, one commits the offense regardless of whether the other person is a
frightened or not. Non-offenses. To inform another person of dangers from ghosts, r
etc., without intending to frighten him/her constitutes no offense. Summary: Attempti
frighten another bhikkhu is a pacittiya offense. * * *

56. Should any bhikkhu who is not ill, seeking to warm himself, kindle a fire or hav
kindled -- unless there is a suitable reason -- it is to be confessed. "Now at that tim
the winter months, bhikkhus warmed themselves, having kindled a fire by a certain large
log. And in that hollow a cobra was scorched by the fire. Coming out, it sprang at the b
The bhikkhus ran off every which way." Here again the factors for the full offense ar
three. 1) //Object//: One is not ill. 2) //Effort//: One lights a fire or gets someone else t
light one, 3) //Intention//: for the purpose of warming oneself. Object. //Not ill//,
in the context of this rule, means that one can fare comfortably without warming oneself. T
makes the point that perception is not a mitigating factor here: Even if one perceives on
ill in these terms, but actually isn't, that still fulfills this factor. What this means is that wher
is chilly outside, one should be very sure that extra warmth is necessary for one's health
going ahead and lighting a fire to warm oneself. Effort. //Lighting a fire// at present w
include turning on the flame in a heating system in one's dwelling for the sake of the war
or electric heating systems, which do not use flames, would not be included here. If,
ill, one gets someone else to light a fire for the purpose of warming oneself, there is a paci
making the order/request/suggestion, and another pacittiya when the other person lights
return a burning piece of fuel to a fire is grounds for a dukkata; adding new fuel to a fire --
to the Commentary -- is grounds for a pacittiya. Intention. There is no offense if one
a fire, or has one lit, for purposes other than warming oneself. Thus one may light a lam
fire to boil water, burn dead leaves, or fire an alms bowl without penalty. The Cullavagga
that if a forest fire is approaching one's dwelling, one may light a counter-fire to ward off
approach. In other circumstances, though, Pacittiya 10 would impose a penalty for lighting
top of "live" soil, and Pacittiya 11 would impose a further penalty for damaging plant life.
Non-offenses. In addition, there is no offense in warming oneself at raked-out coals or at a
someone else (not at one's request). And there is no offense in lighting a fire when there a
dangers, which the Commentary says refers to cases when one is bitten by a snake (and
snake-bite medicine mentioned under Pacittiya 40), when one is surrounded by robbers, o
non-human beings or beasts of prey. Cv.V.14.1 allows bhikkhus to use a "fire hall," sim
sauna at present, for the purpose of inducing perspiration for health reasons. According
Vibhanga, there is no offense in lighting a fire in a place such as this. The purpose o
rule is suggested by a passage in the Anguttara Nikaya (V.219) that lists the five disadvan
sitting around a fire: It is bad for one's eyes, bad for one's skin, bad for one's strength and
importantly, in this context) groups tend to form (that can turn into factions), and they spen

time in "animal talk." Summary: Lighting a fire to warm oneself -- or having it lit -- w
one does not need the warmth for one's health is a pacittiya offense.

* * * 57. Should any bhikkhu bathe at intervals of less than half a month,
except at the proper occasions, it is to be confessed. Here the proper occasions are the
month and a half of the hot season, the first month of the rains, these two and a hal
being a time of heat, a time of fever; (also) a time of illness; a time of work; a time o
going on a journey; a time of wind or rain. These are the proper times here. "Now
time bhikkhus were bathing in the hot spring (at Rajagaha). Then King Seniya Bimbisar
having gone to the hot spring with the thought, 'I will bathe my head,' waited to one s
thinking, 'I will wait as long as the masters are bathing.' The bhikkhus bathed until
nightfall. "Then King Seniya Bimbisara of Magadha, after having bathed his he
the wrong time (night) -- the gates of the city being closed -- spent the night outside the
walls....(The Buddha learned of the incident and rebuked the bhikkhus:) 'How can you
having seen the king, bathe not knowing moderation?'" The original formulation of thi
with no allowance for "proper occasions" -- seems to have been intended as a temporary
measure for the bhikkhus who had inconvenienced the king. (There was a similar tempora
eating mangoes (Cv.V.5.1), that the Buddha formulated when King Bimbisara had invite
help themselves to his mangoes, and some group-of-six bhikkhus went and took all the ma
even the unripe ones. The rule was later rescinded (Cv.V.5.2) when the Buddha allowe
any and all fruit as long as it was allowable in any of the five ways mentioned under Pacitti
As for this rule: Once the proper occasions were added, they relaxed it considerably. Fo
//a time of illness// is any time when one does not feel comfortable without bathing;
//a time of work// can involve as little work as sweeping out one's room; //a time of
on a journey// is whenever one is about to go, is going or has gone on a trip of at least h
league (approximately 5 miles/8 kilometers); //a time of wind and rain// is wheneve
dusty wind blows and at least two or three drops of rain fall on one's body. In additio
Mahavagga (V.13) tells the story of Ven. Maha Kaccana's leaving the middle Ganges Vall
Avanti, to the south. After some time, one of his students -- Ven. Sona Kutikanna -- ask
to visit the Buddha. Ven. Maha Kaccana gave his permission, together with a request to c
Buddha: that certain rules inappropriate for areas outside of the Ganges Valley -- this rule
-- be rescinded for bhikkhus living in outlying districts. The Buddha complied with the re
defined the outlying districts in such a way that there is nowhere in the world outside of the
Ganges Valley where this rule applies. Offenses. For those who live in the middle G
Valley, the offenses for bathing more frequently than once a fortnight outside of the prop
are these: a dukkata for every time one scrubs oneself with //chunam// (bathing powder) o
and a pacittiya when one has finished bathing. Perception is not a mitigating factor h
Even if one miscounts the days, one is still subject to the offense. Non-offenses. In a
to the allowances to bathe more frequently than once a fortnight during the proper occasio

areas outside the middle Ganges Valley, there is no offense in bathing more frequently if c
a river or if there are dangers. This last allowance the Commentary explains with an exa
being chased by bees and so jumps into the water to escape them. Summary: Bathi
frequently than once a fortnight when residing in the middle Ganges Valley, except on c
occasions, is a pacittiya offense. * * * 58. When a
bhikkhu receives a new robe, any one of three means of discoloring it is to be applied:
or black. If a bhikkhu should make use of a new robe without applying any of the th
of discoloring it, it is to be confessed. "Now at that time many bhikkhus and war
were traveling from Saketa to Savatthi. On the way, thieves came out and robbed t
officials, coming out of Savatthi and capturing the thieves with the goods, sent a messe
the bhikkhus, saying, 'Come, revered sirs, let each identify his own robes and take ther
bhikkhus could not identify their robes. People were offended and annoyed and sp
about, 'How can revered ones not identify their own robes?'" Protocol. As this rule in
a bhikkhu should wear robes only that have been marked with an identifying mark. The Vi
not go into any great detail on procedures for marking a robe, aside from saying that the m
small as the tip of a blade of grass, and can be made with any of the colors mentioned in t
(The color green in Pali also covers the color blue, so a mark made with blue ink would be
The Commentary goes into more detail: After the robe has been dyed, one should mal
smaller than the size of a bedbug's back and no larger than the iris of a peacock's eye in a
corners of the robe, three corners, two, or one, as one sees fit. Only round marks are allo
things as lines or angular marks (squares, triangles, or stars) are not. As the Vibhang
once the robe has been marked, there is no need to mark it again, even if the mark wears
part of the robe gets torn (%), one sews a marked cloth together with an unmarked one,
darns, or adds a hem to a marked robe. If Bhikkhu X marks a robe and then gives it to Bh
wear it without having to mark it again. In Thailand at present, the custom is to make
small dots in one corner of the robe, saying,"//Imam bindu-kappam karomi//," (I make thi
marked) while making each dot. This procedure does not appear in the Canon or commen
conflict with any of them. The factors for the offense here are two: //object// -- a new
robe; and //effort// -- one makes use of it without first marking it. Object. According to
Vibhanga, a //new robe// here refers to one made out of any of the six kinds of robe-cloth a
marked. Thus an unmarked cloth kept for a long time is still regarded as new. The Comm
//robe// in the context of this rule refers specifically to robes that can be worn over the sh
or around the waist -- i.e., lower robes, upper robes, outer robes, rains-bathing cloths, skin
covering cloths -- and not to ordinary pieces of cloth or other cloth items such as sitting c
handkerchiefs, or shoulder bags. Any cloth requisite that is not a robe in this sense is not
an offense. Shoulder cloths (//ansa//) were not worn in the time of the Commentary, but
fall under this factor, as would any other item a bhikkhu might wear around his body.
The Vibhanga defines this factor with the verb "use" (//paribhunjati//), while the K/Commen

specific in saying that this factor is fulfilled when one wears the robe over the shoulders the waist. Since the mark is to be added only after the robe is dyed, this factor does not c things as trying on a new robe while it is being sewn but has yet to be dyed. Non-o As noted above, there is no offense -- in using a robe that has been properly marked; a robe whose mark has worn off (as in washing); or in using a robe whose marked corner or otherwise destroyed. There is also no need to remark a marked robe if one sew together with an unmarked piece of cloth, or if one patches it, darns it, or adds a new hem The K/Commentary adds that if one's robes have been stolen, destroyed, etc., one may piece of cloth without committing an offense. Summary: Wearing an unmarked robe offense. * * * 59. Should any bhikkhu, himself having placed robe-cloth under shared ownership (vikappana) with a bhikkhu, a bhi female probationer, a male novice, or a female novice, then make use of the cloth witho ownership's being rescinded, it is to be confessed. Shared ownership. As mentioned explanations to NP 1, //vikappana// is an arrangement whereby a bhikkhu places a robe o under shared ownership so that he may store it for any length of time without its being cou extra cloth. One may share ownership with novices, bhikkhunis, female probationers, and novices, as well as with one's fellow bhikkhus. Passages in the Mahvagga (VIII.20.2; VII that shared ownership is intended for cloth that is being stored, and not for cloth in use. that has not been made into a finished robe, rains-bathing cloths being kept during the eig the year outside of the rainy season, and skin-eruption covering cloths being kept when needed, may all be placed under shared ownership. The three basic robes, miscellaneous handkerchiefs, and the sitting cloth may not. As this rule states, when a bhikkhu wants to cloth placed under shared ownership, the shared ownership must first be rescinded. The Vibhanga to this rule explains how cloth may be placed under shared ownership, but explanation is rather terse, so we will have to discuss two alternative interpretations. //What the Vibhanga says//. One may place a piece of cloth under dual ownership only if i six kinds of robe-cloth discussed under NP 1, and it measures at least four by eight finge There are two ways of placing it under dual ownership: in the presence of (the second ow although this is a controversial point) or in the absence of (again, this would seem to mea owner). In the first method, one says, "I place this robe-cloth under shared ownershi (plural)" or "with so-and-so." (The Pali formulae for this and the following procedures are V.) This is as far as the Vibhanga explains the method, but it seems to refer to two ways the procedure in the presence of the second owner: One uses "you (plural)" if the other o bhikkhu with more seniority than oneself; and the second owner's name if he/she is a junio bhikkhuni, female probationer, or male or female novice. (Passages throughout the Cano was considered disrespectful to refer to a senior person by his name in his presence. Buc instance, would never address the Buddha as Gotama, although members of other sects Mv.I.74.1, Ven. Ananda says that he is not worthy enough to refer to Ven. Maha Kassapa

latter is his teacher.) The Vibhanga does not say how shared ownership is to be rescin
case like this, although the K/Commentary gives a formula for the second owner to say: "U
give it away, or do as you like with it." In the second method, one gives the cloth to a
witness and says, "I give this robe-cloth to you to place under shared ownership." The w
says, "Who are your friends and acquaintances?" One then names two of one's friends (w
made an arrangement for using one another's belongings on trust), and the witness says
them. Use what is theirs, give it away or do as you like with it." This second method,
apparently, is for use in situations where one has an extra cloth whose time span is almos
far away from any co-religionist with whom one has made an arrangement to use one an
on trust. What is happening in the procedure is that one is giving the cloth away to t
witness; the witness then places it with one as a gift to one's friends. Since one already ha
to use their things on trust, one may freely make use of the cloth if one wants to, or simp
for any number of days if not. (See Mv.V.13.13.) Cases of placing gifts in trust in this way
discussed in detail at Mv.VIII.31.2-3. According to those passages, the witness has no bu
one permission to use the cloth after having given it to the two other people; perhaps the
is included to show that all sides involved -- the witness and the two new owners of the clo
agreeable to one's making use of the cloth. If the two new owners have not previously giv
permission to use their belongings on trust, one may //not// make use of the cloth until they
permission to do so, although one may keep it for any number of days without incurring a
NP 1. //What the K/Commentary says//. The Commentary has nothing to say about
procedures, while the K/Commentary goes into great detail, reworking the Vibhanga's des
up with three methods. In the first method, "in the presence of," one says in the pre
of the second owner, "I place this robe-cloth under shared ownership with you." The share
rescinded when the second owner/witness gives one permission to use the cloth, give it
one likes with it. In the second method -- which the K/Commentary also calls "in the
of" -- one says in the presence of a witness who is not the second owner, "I place this robe
shared ownership with so-and-so." The shared ownership is rescinded when the witness
permission to use the cloth, give it away, or do as one likes with it. In the third metho
the absence of," one gives the cloth to a witness, saying, "I give this robe-cloth to you to p
shared ownership." The witness says, "Who is a friend or acquaintance of yours?" One
and the witness says, "I give it to him/her. Use what is his/hers, give it away, or do as yo
with it." The shared ownership is rescinded when the witness says this. There are a
problems with the K/Commentary's interpretations. First, it is hard to see any practical diff
between its methods 2 and 3, why one should be called "in the presence of" and the other
of," and in method 2 why the witness should have the right to give one permission to use a
that strictly speaking belongs to someone else. Secondly, the K/Commentary's metho
absence of" deviates from the Vibhanga's description of the method. In the Vibhanga's d
the witness places the cloth under shared ownership with two of one's friends, while in the

description, he/she places it under shared ownership with one. Why this should be the c
the texts explains. For these reasons, it would seem that the previous explanation --
there are two methods, as described in the Vibhanga -- is preferable to the K/Commentary
factors for the offense here are two: //object// -- any one of the six kinds of robe-cloth, mea
least four by eight fingerbreadths, that one has placed under shared ownership; and //ef
uses the cloth without the shared ownership's being rescinded. The K/Commentary r
rule applies not only to robe-cloth, but also to bowls as well. There is nothing in any of t
texts on this point, but the Great Standards would seem to support it. Non-offenses.
no offense in using an item placed under shared ownership if the shared ownership has be
if one makes use of the item on trust. The factors for legitimately taking an item on trust
follows (Mv.VIII.19.1): 1) The other person is an acquaintance. 2) He/she is one's frien
3) He/she has spoken of the matter. (According to the Commentary, this means that he
"You may take any of my property you want.") 4) He/she is still alive; and 5) one kn
he/she will not mind. These factors are discussed in detail under Parajika 2. The
K/Commentary's analysis of the factors involved in committing an offense under this rule s
when an item placed under shared ownership is taken on trust, the shared ownership is
rescinded, and the item reverts to the status of extra cloth or an extra bowl, as the case m

should not leave his requisites scattered around." Hiding things with this purpose in m

sometimes an effective way for a teacher to train his students to stop being careless wit belongings, but it should be used with discretion, for it can easily backfire. Summa Hiding another bhikkhu's bowl, robe, sitting cloth, needle case, or belt -- or having it hid as a joke or with the purpose of annoying him, is a pacittiya offense. * * * * * * * *

CHAPTER EIGHT

Part Seven: The Animal Chapter ~~~

the animal dies does one incur the pacittiya here. The Commentary to Pacittiya 74 impose the simple act of striking an animal. Non-offenses. There is no offense in killing an a -- //unintentionally// -- e.g., accidentally dropping a load that crushes a cat to deat //unthinkingly// -- e.g., absent-mindedly rubbing one's arm while it is being bitten b mosquitoes; //unknowingly// -- e.g., walking into a dark room and, without realizing stepping on an insect; or //when one's action is motivated by a purpose other than that causing death// -- e.g., giving medicine to a sick dog whose system, it turns out, cannot the dosage. Still, the Commentary states that if one notices even bed bug eggs while bed, one should be careful not to damage them. Thus, "out of compassion, one's duties a carefully." Or, in the words of the Sub-commentary: "One's duties in looking after one's are to be done with mindfulness well-established so that such creatures do not die." Deliberately killing an animal -- or having it killed -- is a pacittiya offense.

* * *

62.Should any bhikkhu knowingly make use of water with living beings in it, it is to be confessed. This rule is similar to Pacittiya 20, differing only in factor of effort and the way the non-offenses are defined. Here, as under that rule, the fa the full offense are four: Object: water containing living creatures. This includes things mosquito larvae, but not beings too small to be seen. Perception. One knows that they (from having seen them or heard that they are there, says the K/Commentary), and that th from the factor of effort, defined below. If one is in doubt as to whether water contain beings, then to use it in a way that would cause their death if they //were// there is to incu dukkata. Effort. The Vibhanga does not go into detail on this factor, while the Comm defines it with examples: drinking the water, using it to wash one's bowl, using it to cool he dipping it out of a tank or pond to bathe with it, making waves in a pool so that the water splash over its banks. The Sub-commentary suggests that this rule covers only cases in w water for one's own personal consumption, but this does not fit with the fact that, under t the Commentary explains how one should go about cleaning out a dirty pool. (Place eight potfuls of water containing no living beings in another place that will hold the water, and th water from the pool into it.) From all of this, it would appear that this rule covers all cas of using water containing living beings that are not covered by Pacittiya 20. Unlike t rule, though, the factor of effort here does //not// cover cases of telling someone else to us containing living beings. Intention. This factor is fulfilled simply by the desire to use the water As the K/Commentary notes, one need not have murderous intent toward in order to fulfill this factor. For example, if after perceiving that the water contains insects one chooses to ignore their existence and boils the water -- not to kill the insects, but to us for bathing -- one commits an offense all the same. "Result" is not a factor here. Wh not the living beings actually die is of no consequence in determining the offense. Non-offenses. There is no offense in using water -- if one does not know that it contain beings; if one knows that it does not contain living beings; or if one knows that the living

it contains will not die from the use one has in mind. Water strainers. Cv.V.13.1 giv
permission for one to use a water strainer to remove dirt and living beings from water befo
it, and such strainers eventually became one of a bhikkhu's eight basic requisites. Accord
Cv.V.13.2, one must take a water strainer along when going on a journey. If one has no
may determine the corner of one's outer robe as a strainer and use it to filter water.
Summary: Using water, knowing that it contains living beings that will die from one's us
pacittiya offense. * * * 63. Should any
bhikkhu knowingly agitate for the reviving of an issue that has been rightfully dealt with,
be confessed. Issues. An issue (//adhikarana//) is a matter that, once arisen, must
dealt with formally in a prescribed manner. The Vibhanga lists four sorts: 1) //dispute
concerning Dhamma and Vinaya (see Sanghadisesa 10), which the Community must de
which side is right and which wrong; 2) //accusations// concerning offenses (see San
& 9; Aniyatas 1 & 2), which the Community must deal with by judging them true or f
3) //the commission of offenses//, which are to be dealt with by the offenders' undergoin
prescribed penalties; and 4) //duties of the Community// -- such as giving ordination and
holding the Patimokkha recitation -- which the Community must deal with by performing
An issue rightfully dealt with is one that has been handled fairly in accordance with the p
given in the Vinaya. Some of these procedures are discussed under Pacittiyas 79 & 80, a
Adhikarana-Samatha rules. If an issue has been dealt with improperly, it may be reopene
reconsideration, but once it has been dealt with properly it is considered closed for good.
factors for an offense under this rule are three. 1) //Object//: an issue that has been de
properly. 2) //Perception//: One knows that it was dealt with properly, either because
directly involved or one has been told of the matter. 3) //Effort//: One says -- in the
presence of another bhikkhu -- that it was dealt with improperly. The Vibhanga gives the f
examples of statements that would fulfill this factor: "The issue was not carried out." "It wa
carried out." "It should be carried out again." "It was not settled." "It was poorly settled."
should be settled again." The Parivara (IX.3) contains a short discussion of this rule, a
makes the point that one is subject to this rule regardless of whether or not one was involv
with the issue the first time around. Further action. If one makes a concerted effort t
reopen an issue, knowing that it was properly dealt with, one is considered a maker of st
such is subject to an act of censure, banishment, or suspension, depending on the gravity
Non-offenses. There is no offense in agitating to have an issue re-opened if one perce
have been improperly dealt with: e.g., dealt with not in accordance with the rules and proc
the Vinaya, dealt with by an incomplete group, or -- in the case of an accusation or similar
performed against someone who did not deserve it. This allowance holds regardless of w
actuality, the issue was properly dealt with or not. For example: A Community has perform
censure against Bhikkhu X. One honestly believes that X did not deserve the act, and say
fellow bhikkhu. In this case, one commits no offense, even if it turns out that X did in fact

abandons one's responsibility, but then later changes one's mind and tells another bhikkhu
committed the offense all the same. It also says that if one tells Bhikkhu X, asking him
hide Bhikkhu Y's offense, this also fulfills the factor of effort here. If X then abandons his
responsibility to tell, he too commits the offense under this rule. Non-offenses. There
offense in not telling another bhikkhu -- if one thinks that telling will lead to strife or a
split in the Community; if one fears reprisals from the bhikkhu who has committed the
offense; if there is no suitable bhikkhu to tell; if one is not trying to hide the offense; or
if one feels that the wrong-doer's own behavior will betray him and thus there is no nee
Summary: Not informing other bhikkhus of a serious offense that one knows anoth
committed -- out of a desire to protect him either from having to undergo the penalty
the jeering remarks of other bhikkhus -- is a pacittiya offense.
* * * 65. Should any bhikkhu knowingly give full ordination to an individual
less than twenty years of age, the individual is not ordained and the bhikkhus are blame
for him (the preceptor), it is to be confessed. The origin story here tells how the grou
came to be ordained. "Now at that time in Rajagaha, a group of 17 boys were frien
the boy Upali as their leader. Then the thought occurred to Upali's parents, 'By what me

Upali, after our death, live pleasantly and not grow weary (with work)?...If he studies
his fingers will hurt....If he studies calculation, his breast will hurt....If he studies
money changing, his eyes will hurt. Now, these Sakyan contemplatives are of pleasing
conduct. Having eaten fine meals, they lie down in beds sheltered from the wind. If U
forth among the Sakyan contemplatives, he would live pleasantly after our death ar
weary with work.' "The boy Upali heard his parents' conversation. Then he wer
boys...and said, 'Come, masters, let's go forth among the Sakyan contemplatives.'
you go forth, master, so will we.' "So each of the boys, having approached his parer
'Permit us to go forth from home into homelessness.' Then the parents of the boys
permission, (thinking,) 'All these boys are unanimous. They want what is noble.'
boys) having approached the bhikkhus, asked for the going forth. The bhikkhus gave th
forth and full ordination. Then, waking up in the last watch of the night, the boys (no
bhikkhus) cried out, 'Give us porridge! Give us rice! Give us food!' "The bhikkh
said, 'Wait, friends, until it turns light. If there is porridge, you will drink it. If there is
rice, you will eat it. If there is food, you will eat it. But if there is no porridge or
rice or food, then you will eat having gone for alms.' "But even then, those (new
bhikkhus cried out as before, 'Give us porridge! Give us rice! Give us food!' And they
the bedding and soiled it." The Buddha, in rebuking the bhikkhus who had given full o
to the 17 boys, painted a picture of the bhikkhus' life very different from that imagined by U
parents: "Bhikkhus, how can these worthless men knowingly give full ordination to
individual less than 20 years old? An individual less than 20 years old is not resistant to
heat, hunger, thirst, the touch of gadflies and mosquitoes, wind and sun and creeping
to abusive, hurtful language. He is not the sort that can endure bodily feelings that,
they arise, are painful, sharp, stabbing, fierce, distasteful, disagreeable, deadly.'" Th
factors for the full offense here are three. 1) //Object//: a man less than 20 years old.
2) //Perception//: One knows that he is less than 20 years old. 3) //Effort//: One acts a
preceptor in his full ordination as a bhikkhu. Object. As Mv.I.75 makes clear, a perso

as the preceptor in the ordination of a person one knows to be less than 20 years old is
offense. * * * 66.Should any bhikkhu
knowingly and by arrangement travel together with a caravan of thieves, even for the int
between one village and the next, it is to be confessed. Here the full offense has three fa
1) //Object//: a caravan of thieves. 2) //Perception//: One knows that it is a caravan of t
3) //Effort//: (a) One makes an arrangement together with the caravan to travel togeth
one actually travels together with them as arranged (c) from one village to another.
A //caravan of thieves//, according to the Vibhanga, is any group that has committed a thef
way to commit a theft, is planning to evade a tax, or is planning to "rob the king," which t
Commentary translates as planning to cheat the government in one way or another. At pr
include any person or group of people smuggling or trading in contraband goods. No
texts mention the minimum number of thieves needed to form a "group," but arguing from
we can say that even a single thief would fulfill this factor. Perception. If one does no
know that a person or group would count as a caravan of thieves, there is no offense in tra
arrangement with them. If one is in doubt, then there is a dukkata for traveling with them r
whether they actually are a caravan of thieves or not. Making an arrangement. Acco
Vibhanga, the bhikkhu must give his verbal consent to the arrangement for this part of the
be fulfilled. In other words, if the thieves propose the arrangement, and he agrees; or he p
regardless of whether or not they agree, this part of the factor is fulfilled. The penalty fo
fulfilling it is a dukkata. If the thieves propose the arrangement, while the bhikkhu does
give his verbal assent, then even if he does travel together as they proposed, he commits
doing so. Going as arranged. If a specific time frame was part of the arrangement,
two parties must begin traveling together within that time frame for this factor to be fulfilled
happen to start out earlier or later than arranged, the bhikkhu incurs no penalty. The Co
notes, though, that if they leave from a different spot than the one they had arranged or go
different route, that does not absolve the bhikkhu from the offense From one village to
There is a pacittiya for every village-to-village interval one passes. In an area where there
villages -- i.e., says the Sub-commentary, where villages are farther than half a league (8 l

miles) apart -- there is a pacittiya for every half-league one travels together as arranged. None of the texts mention cases of traveling long distances within a large city, but it would such cases -- arguing from the Great Standards -- one would incur the full penalty in trave one administrative district to the next. Non-offenses. There is no offense -- if the bhikkhu and thieves happen to travel together without having made an arrangement; thieves propose an arrangement, while the bhikkhu does not give his verbal assent; leave together at a time other than that they had previously arranged; or if there a dangers (and the bhikkhu must join the caravan for his safety). Summary: Traveli arrangement with a group of thieves from one village to another -- knowing that they are -- is a pacittiya offense. * * * 67.Should any bhikkhu, by arrangement, travel together with a woman, even for the interval betwe and the next, it is to be confessed. "Now at that time a certain bhikkhu, going throu Kosalan countryside on his way to Savatthi, passed by the gate of a certain village. certain woman, leaving the village after quarreling with her husband, saw the bhikkhu said, 'Where are you going, sir?' "'I'm going to Savatthi, sister.' "'Then I'm going with you.' "'As you wish, sister.' "Then the woman's husband, leaving village, asked people, 'Have you seen such-and-such a woman?' "'She's going a monk.' "So the man, having caught up with them, seized the bhikkhu, gave hi thrashing, and set him free. The bhikkhu went and sat fuming under a certain tree. The the man, 'That bhikkhu didn't abscond with me. //I// was the one who went with //hi innocent. Go and ask his forgiveness.' "So the man asked the bhikkhu for his forgiveness." Object. A female human being, mature enough to know what is and is no grounds for a pacittiya here. Pandakas (see Sanghadisesa 2), female yakkhas and petas form of a female human being are all grounds for a dukkata. Perception is not a mitiga here. Thus if one travels by arrangement with a woman disguised as a man, one still incu penalty. Similarly, if one travels by arrangement with a pandaka, not knowing that that's w still incurs a dukkata. Effort here is defined as under the preceding rule: (a) One ma an arrangement together with the woman to travel together and (b) one actually travels tog as arranged (c) from one village to another. See the preceding rule for explanations. Non-offenses. There is no offense -- if the bhikkhu and woman happen to travel togeth having made an arrangement; if the woman proposes an arrangement, while the bhi give his verbal assent; if they leave together at a time other than that they had prev arranged; or if there are dangers. Current practice. In the time of the Buddha, long-d travel was mostly by foot, and the question of prior arrangement was what made the diff whether one was traveling together with someone else or simply happened to be walking a the same time. At present, when one is taking public transport -- buses, subways, trains airplanes -- this is still the factor determining whether one is traveling together with someo simply happens to be on the bus, etc., at the same time. This rule thus forbids a bhikkhu

traveling together with a woman, by prior arrangement, on the same public transport. transport, though -- such as automobiles, trucks and vans -- is an area that different Comm in differing ways. Some treat it under Pacittiya 44, rather than here, and say that a bhikk in an automobile with a woman as long as a knowledgeable man is present. This holds re the automobile is sitting still or traveling any number of miles, and regardless of whether or the man is driving. Other Communities treat private transport under this rule, but say the prior arrangement is implicitly with the driver of the transport. If the driver is a woman, a pacittiya in riding with her from one village to the next. If the driver is a man, there is n offense, regardless of whether or not a woman is riding along. The Commentary wou with this second interpretation, for it states explicitly when discussing Mv.V.10.3 that a bhi ride in a cart driven by a woman or a man. At any rate, though, this is another area where policy is to follow the practice of the Community in which one belongs, as long as one is ca adhere to the Vibhanga by not entering verbally into any arrangement with a woman to go together. Summary: Traveling by arrangement with a woman from one village to a pacittiya offense. * * * 68. Should any bhikkhu say the following: "As I understand the Dhamma taught by the Blessed One, th Blessed One says are obstructive for me, when indulged in, are not genuine obstru bhikkhus should admonish him thus: "Do not say that, venerable sir. Do not misrepres Blessed One, for it is not good to misrepresent the Blessed One. The Blessed One wou anything like that. In many ways, friend, the Blessed One has described obstructive when indulged in they are genuine obstructions." And should the bhikkhu, thus ad the bhikkhus, persist as before, the bhikkhus are to rebuke him up to three times so desist. If while being rebuked up to three times he desists, that is good. If he does not desist, it is to be confessed. Obstructions. An obstruction, the Commentary says, is anyt acts as an obstacle to the attainment of heaven or emancipation. It lists five major types: //Acts//, i.e., the five //anantariya kamma//: patricide, matricide, the murder of an arahan wounding of a Buddha, the creation of a schism in a Sangha; 2) //Defilements//, i.e., f wrong views (the Sub-commentary lists determinism, fatalism, annihilationism, etc.) //Fruits of past actions//, e.g., birth as a neuter person, a hermaphrodite, a common anim //Disputes//, i.e., disputes with Noble Ones -- even simple contentiousness in the mind, Sub-commentary -- although these are obstructions only so long as one has not asked forgiveness; and finally, for a bhikkhu, 5) //Intentional transgressions// of the Buddha's ord although these are obstacles only as long as one has not undergone the penalty call relevant rule. The Commentary notes that this training rule deals with a bhikkhu who h view that this last category is not an obstacle, the most common example being the bhikkh that there is nothing wrong in a bhikkhu's having sexual intercourse in defiance of Paraji There are many ways that one might rationalize such an idea, and the Commentary gives description of one of them: "Here a bhikkhu...having gone into seclusion, reasons as

follows: 'There are people living the household life, enjoying the five pleasures of the se
are stream-winners, once-returners, and non-returners. As for bhikkhus, they see p
forms cognizable via the eye, hear...smell...taste... feel (pleasurable) tactile sensati
cognizable via the body. They use soft carpets and clothing. All this is proper. Then w
the sight, sound, smell, taste, and feel of a woman be proper? They too are proper
Thus...comparing a mustard seed with Mount Sineru, he gives rise to the pernicious vie
the Blessed One -- binding the ocean, as it were, with great effort -- formulate the first
training rule? There is nothing wrong with that act.'" Simply holding such a view is
enough to bring a bhikkhu under the purview of this rule, but if he asserts it to others, othe
bhikkhus have the duty of reprimanding him up to three times in the manner described in t
having learned of his assertion, one does not reprimand him, one incurs a dukkata, for if h
unreprimanded, he may continue with his assertions as he likes without incurring a penalty
after being reprimanded, he abandons his view, he incurs no penalty. But if he doesn't, he
taken into the midst of the Community to be admonished and rebuked as described under
the only difference here being that the penalty is a dukkata in each of the preliminary stage
pacittiya after the third formal rebuke. Perception is not a mitigating factor here. If th
act of admonishment and rebuke is properly carried out, then his offense is a pacittiya re
whether or not he regards it as such. If the act is improperly carried out, then again -- rega
how he perceives the validity of the act -- he incurs a dukkata (%). Further action. If
bhikkhu penalized under this rule persists in asserting his wrong view, he is subject to an a
suspension, under which he is not allowed to consort or have communion with bhikkhus
until he sees the error of his ways and abandons his view. Non-offenses. There is n
for the bhikkhu if he has not been reprimanded or if, after being reprimanded, he abandon
Summary: Refusing -- after the third announcement of a formal rebuke in a meetin
Community -- to give up the wrong view that there is nothing wrong in intentionally
transgressing the Buddha's ordinances is a pacittiya offense.

* * *

69.Should any bhikkhu knowingly consort, join in communion, or lie down in the same lo
bhikkhu professing such a view who has not acted in compliance with the rule, who
abandoned that view, it is to be confessed. There are three factors for the full offense her
1) //Object//: a bhikkhu who has been suspended by a formal act of the Community and
restored. 2) //Perception//: One knows that he has been suspended and has not yet
restored. 3) //Effort//: One consorts with him, joins in communion with him, or lies dow
same lodging with him. Object. According to Cv.I.25-35, a bhikkhu may be suspended f
of three reasons: He holds to wrong views, as in the preceding rule; he refuses
see an offense (i.e., he admits to having performed an act forbidden by the rules, but refus
that it is an offense); or he refuses to undergo the penalty for an offense he admits t
having committed. Once a bhikkhu has been suspended, it is his duty to change his

reject the view or position that led to his suspension, so that he may be restored to normal

As the Commentary makes clear, the factor of object here is fulfilled by a bhikkhu who suspended for any of these three reasons and has yet to be restored. The Vibhanga's no- clauses, though, add that if the bhikkhu was suspended for holding a wrong view and has that view, he does not fulfill this factor even if the Community has yet to restore him to nor status. Perception. There is no offense in consorting, etc., with a suspended bhikkhu does not know that he has been suspended; and a dukkata for consorting, etc., with a bhik doubt as to whether he has been suspended. This last penalty holds regardless of whet actually been suspended or not. Effort here covers any one of three sorts of action: //One consorts with the bhikkhu//. Consorting takes one of two forms: sharing material i.e., giving material objects to the bhikkhu or receiving them from him; or sharing Dhamm i.e., reciting Dhamma for him or getting him to recite Dhamma. The penalties for sharin if one recites line-by-line or gets the other to recite line-by-line, a pacittiya for each line of Dhamma recited; if one recites syllable-by-syllable or gets him to recite syllable-by-syllable, a pacittiya for each syllable. 2) //One joins in communion with bhikkhu//, i.e., one performs a formal act of the Community in which he takes a part. An example would be sitting in the same assembly with him to listen to the Patimokkha. //One lies down in the same lodging with him//. "Same lodging" here, unlike Pacittiyas 5 one with the same roof. Thus, as the K/Commentary notes, if one is lying under the sam with the bhikkhu, one falls under this factor even if one is lying in a room that is not conn any entrance with the one he is lying in. And, we might add, one falls under this fac regardless of whether the lodging is walled or not. Whether one lies down first, the susp bhikkhu lies down first, or both lie down at the same time, is not an issue here. The actions touch on only a few of the observances a suspended bhikkhu must follow, but they that entail a pacittiya for the bhikkhu who has dealings with him while he is suspended. details, see Cv.I.25-35. Non-offenses. There is no offense in consorting, joining in communion, or lying down in the same lodging with another bhikkhu if one perceives that has not been suspended; he was suspended but has been restored; or he has abando that led to his suspension. These exemptions hold regardless of whether or not one's is correct. Summary: Consorting, joining in communion, or lying down under the s with a bhikkhu who has been suspended and not been restored -- knowing that such is a pacittiya offense. * * * 70.And if a novice should say the following: "As I understand the Dhamma taught by the Blessed O the Blessed One says are obstructive for me when indulged in, are not genuine obst bhikkhus should admonish him thus: "Do not say that, friend novice. Do not misrep Blessed One, for it is not good to misrepresent the Blessed One. The Blessed One wou anything like that. In many ways, friend, the Blessed One has described obstructive ac indulged in they are genuine obstructions." And should that novice, thus admon

the bhikkhus, persist as before, the bhikkhus should admonish him as follows: "Fro
forth, friend novice, you are not to claim the Blessed One as your teacher, nor are you e
to have the opportunity the other novices get -- that of sharing lodgings two or three nigl
bhikkhus. Away with you! Out of our sight! (literally, 'Get lost!')" Should any
bhikkhu knowingly support, receive services from, consort with, or lie down in the same
novice thus expelled, it is to be confessed. The factors for the full offense here are th
1) //Object//: a novice who has been expelled and has not given up his wrong view.
//Perception//: One knows that he has been expelled and has not given up his wrong view
//Effort//: One supports him, receives services from him, consorts with him, or lies down in
lodging with him. Object. According to the Commentary, there are three types of exp
Expulsion from communion (this applies only to bhikkhus and bhikkhunis, and refers to the
suspension discussed under the preceding rule); expulsion from one's status; and expulsio
punishment. Novices are subject to the latter two. (1) The Mahavagga (I.60) lists ten
for expelling a novice from his status as a novice: He breaks any of his first five precept
speaks in dispraise of the Buddha, Dhamma, or Sangha; he holds to wrong views (such th
fatalism or annihilationism, says the Commentary), or he rapes a bhikkhuni. A novice
any of his first five precepts has cut himself off from the Triple Refuge, from his teacher, ar
right to a lodging in a monastery. He is still a novice, though, and if he sees the error of
and is determined to restrain himself in the future, he may take the Triple Refuge from his
and so be restored to his former status. (The Commentary says that a novice who know
alcohol in defiance of the fifth precept may be restored to his status as a novice but may n
a bhikkhu in this lifetime. Not all Communities share this view.) If, though, he breaks
these precepts habitually and is not determined to restrain himself in the future, he is to be
from his status as a novice. As for the novice who holds to wrong views or who speak
dispraise of the Buddha, Dhamma, or Sangha, the bhikkhus are to instruct him to show hi
ways. If he abandons his views, he is to undergo punishment for an appropriate period (s
Mv.I.57-58) and then be allowed to confess his error, so as to return to his former status.
not change his ways, he is to be expelled from his status as a novice. And as for the
who rapes a bhikkhuni: The Commentary notes that this comes under the breaking of the
is listed separately because a novice who has sexual intercourse with anyone but a bhik
reinstated if he sees the error of his ways, whereas one who has raped a bhikkhuni may n
furthermore, he can never be ordained as a novice or a bhikkhu in this lifetime. Exce
last case, a novice who has been expelled from his status as a novice may be reordained
sees his errors and can convince the bhikkhus that he will mend his ways in the future.
The second form of expulsion -- expulsion as punishment -- is the one mentioned in this ru
comes to think that there is nothing wrong with any novice's having sexual intercourse or
of his other precepts. If he asserts this view, the bhikkhus are to instruct him to show that
wrong, but if they cannot sway him, they are to expel him in the form described in the rul

no right to claim the Buddha as his teacher and loses his right to live in the same lodgings bhikkhus, although he retains his status as a novice. This form of expulsion lasts as lon yet to abandon his view. If and when he does abandon it, he is to be reinstated: The Com say how, but we can reason from the pattern mentioned above that he should take the T his teacher again. The Commentary states that the factor of object under this rule is by a novice who has undergone expulsion as punishment and has yet to abandon his wro argue from the Great Standards to say that an ex-novice who has been expelled from his novice would fulfill the factor as well. Perception. There is no offense in supporting, et expelled novice if one does not know that he has been expelled; and a dukkata for supp novice if one is in doubt about the matter. This last penalty holds regardless of whether he been expelled or not. Effort here is fulfilled by any one of four sorts of action:
1) //Supporting a novice// means providing him with material requisites or instruction in t as a mentor would. 2) //Receiving services// from him means to accept the services a normally receives from his student -- the Vibhanga mentions accepting powder, clay (so tooth-wood, or water for washing the face (%). 3 & 4) //Consorting// and //lying down lodging// are defined as under the preceding rule. Non-offenses. There is no offens supporting, etc., a novice if one perceives that he has not been expelled, or if one knows t abandoned the view/position that led to his expulsion in the first place. Summary: Su receiving services from, consorting, or lying down under the same roof with an expelled knowing that he has been expelled -- is a pacittiya offense. * * * * * * * *

CHAPTER EIGHT

Part Eight: The In-accordance-with-the-Rule Chapter

~~~
~~~

Upali, referring to him again and again. The bhikkhus (said), '...Come, friends, let's stud
discipline with Ven. Upali.' They and many other bhikkhus -- elders, newly ordained, an
between -- studied discipline with Ven. Upali. "Then the thought occurred to so
group-of-six bhikkhus: 'Now, friends, many bhikkhus...are studying discipline with V
Upali. If they become well-versed in the discipline, they will push us and pull us around
they like, whenever they like, and as long as they like. Come, friends, let's criticize
discipline.' Then the group-of-six bhikkhus, approaching the bhikkhus, said, 'Why a
lesser and minor training rules repeated when they lead only to anxiety, bother, and con
The full offense here has three factors. 1) //Object//: another bhikkhu. 2) //Effort//
One criticizes the discipline in his presence 3) //Intention//: so as to discourage the st
the discipline. Object & effort. There is a pacittiya for criticizing the discipline in the
presence of a bhikkhu; and a dukkata for criticizing the Dhamma in his presence, or criticiz
discipline or the Dhamma in the presence of an unordained person. The training rule
to indicate that these actions are grounds for an offense only while the Patimokkha is bein
rehearsed, but the no-offense clauses in the Vibhanga give no allowance to criticize the d
other times, and the K/Commentary follows the Vibhanga in not making the recitation of
a necessary factor for the offense here. In other words, the factor of effort here is fulfilled
criticizes the discipline at //any// time. Intention. This factor is fulfilled either if one's
intention is to keep that particular bhikkhu from studying or mastering the discipline, or if
wants the discipline in general to disappear from lack of study. Further action. A bhi
makes a concerted effort to speak in dispraise of the Dhamma or discipline may be subjec
censure or banishment, depending on the seriousness of the case (Cv.I.4.1; Cv.I.14.2).
Non-offenses. There is no offense if, without intending to criticize the discipline, one sugg
another person that he/she master the Suttas or the Abhidhamma first, before mastering t
discipline. Summary: Criticizing the discipline in the presence of another bhikkhu,
hopes of preventing its study, is a pacittiya offense. *
* * 73. Should any bhikkhu, when the Patimokkha is being recited every half-m
say, "Just now have I heard that this case, too, is handed down in the Patimokkha, is in
the Patimokkha, and comes up for recitation every half-month;" and if other bhikkhus
"That bhikkhu has already sat through two or three recitations of the Patimokkha, if
more," the bhikkhu is not exempted for being ignorant. Whatever the offense he has co
he is to be dealt with in accordance with the rule; and in addition, his deception is to be
"It is no gain for you, friend, it is ill-done, that when the Patimokkha is being recited,
do not pay proper attention and take it to heart." Here the deception is to be confessed
summarize the Vibhanga: If a bhikkhu -- when the recitation of the Patimokkha comes to a
violated -- tries to excuse himself through the sort of pretence cited in the rule, he imme
incurs a dukkata if he has already listened to the Patimokkha in full three times or more. T
bhikkhus may then expose his deception through a formal act of the Community. If he th

with the pretence, he incurs a pacittiya. If they do not bring the formal act against him, tho
incurs a dukkata for each effort he makes in keeping up the pretence. There is no offens
he is not feigning ignorance or if he has not yet heard the Patimokkha in full at least three

Obviously, these explanations were written when Pali was the bhikkhus' native languag
recitation of the Patimokkha in Pali offered the opportunity to learn the rules, along with the
opportunity to feign ignorance without telling an out-and-out lie. In other words, one could
immediately after the recitation of a particular rule, "Just now have I heard that this rule is i
Patimokkha," and strictly speaking it would be true: One //has// just heard it, even if for the
time, but one hopes that the other bhikkhus will be deceived into inferring that one has just
for the first time. At any rate, the discussion of this rule in the Vibhanga and commenta
makes no exceptions for bhikkhus whose native language is not Pali, and since the Patimo
in a number of translations, the "grace period" in which one is expected to be ignorant --
recitations covers a month to a month and a half -- is not too short a time for a new bhikkh
remember the rules in translation. The factors for the full offense here are three.
//Object//: One has heard the Patimokkha in full for at least three times, one has tried to fe
ignorance, but the bhikkhus have brought a formal act against one, exposing one's deceit.
//Intention//: One wants to deceive the bhikkhus into believing that one is ignorant of the ru
broken. 3) //Effort//: One says a half-truth to deceive them. (Out-and-out lies would
under Pacittiya 1.) Perception is not a mitigating factor here. If the act exposing one
deceit has been properly carried out, then regardless of whether or not one perceives it as
incurs a pacittiya for trying to deceive the bhikkhus any further. If it has been improperly
out, one incurs a dukkata for trying to deceive them further, regardless of how one perceiv

Non-offenses. There is no offense if one has heard the Patimokkha in full less than th
or if one is not intending to deceive anyone. Summary: Using half-truths to deceive
into believing that one is ignorant of the rules in the Patimokkha, after one has alrea
heard the Patimokkha in full three times, and a formal act exposing one's deceit has bee
against one, is a pacittiya offense.

* * *

74. Should any bhikkhu, angered and displeased, give a blow to (another) bhikkhu, it is
confessed. The factors for the full offense here are three. 1) //Object//: another bhikk
2) //Effort//: One gives him a blow 3) //Intention//: out of anger. Object.
A bhikkhu is grounds for the full offense here; anyone unordained, grounds for a dukkata.
the Commentary, //anyone unordained// includes animals as well as higher forms of life,
or celestial beings. Effort. This factor is fulfilled whether one gives a blow -- with
one's own body (hitting with a fist, jabbing with an elbow, kicking with a foot); with so
attached to the body (e.g., a stick, a knife); or with something that can be "thrown" (this in
such things as throwing a rock, shooting an arrow, or firing a gun). According to the
Vibhanga, this last category includes throwing "even a lotus leaf," which shows that the
be painful in order to fulfill this factor. This factor also includes such things as twistin

the other person's arm behind his back or wringing his neck: It is fulfilled as soon as one his body with the intent to do these things. Intention. If one gives a blow for reasons o anger, the action does not fall under this rule. Thus, for instance, if one thumps a fellow on the back to help dislodge something caught in his throat, there is no offense. And as th notes, if -- motivated by lust -- one gives a blow to a woman, one incurs the full penalty u Sanghadisesa 2. For some reason, the Commentary says that if one cuts off the nose fellow bhikkhu in order to disfigure him, one incurs only a dukkata. As the Vinaya Mukha p though, there is no basis in the Vibhanga or in reason for this statement. It is hard to ima anyone doing this unless motivated by anger, and cutting another person would come und giving a blow with something connected with the body. "Result" is not a factor here. or not the other person is hurt -- or how badly he/she is hurt -- does not affect the offense. intends simply to hurt the other person, but he/she happens to die from one's blow, the ca under this rule, rather than under Parajika 3. In other words, the penalty is a pacittiya if victim is a bhikkhu, and a dukkata if not. Non-offenses. According to the Vibhanga, the offense for a bhikkhu who, trapped in a difficult situation, gives a blow "desiring freedom Commentary's discussion of this point shows that it includes what we at present would cal and the K/Commentary's analysis of the factors of the offense here shows that even if a displeasure arises in one's mind in cases like this, there is no penalty. Summary: Gi blow to another bhikkhu when motivated by anger is a pacittiya offense.

* * * 75. Should any bhikkhu, angered and displeased, raise his hand against (another) bhikkhu, it is to be confessed. This rule is similar to the preceding one, only in the factor of effort: //Raising one's hand// means raising any part of one's body (t the foot, etc.) or anything attached to the body (a stick, a rock, a gun, a bow and arrow) in threatening manner. The Commentary notes that if one intends only to raise one's ha then accidentally gives a blow, one incurs a dukkata. The Sub-commentary explains this i that would make sense: One incurs the dukkata for the blow, but a pacittiya for raising the the first place. The Sub-commentary also notes that if an animal, for example, is ma and a bhikkhu raises his hand against it, this would be included under "desiring freedom" the mess -- and so would not be an offense. Summary: Making a threatening gestur another bhikkhu when motivated by anger is a pacittiya offense.

* * * 76. Should any bhikkhu charge a bhikkhu with an unfounded sanghad (offense), it is to be confessed. Here again the factors for the full offense are three. 1) //Object//: another bhikkhu. 2) //Perception//: One perceives him to be innocent of t offense one is charging him with. 3) //Effort//: One accuses him in his presence -- or g someone else to accuse him in his presence -- of having committed a sanghadisesa offe If one makes an unfounded charge accusing another bhikkhu of having committed a lesse falling away from right views, one incurs a dukkata. The same penalty holds for making a charge accusing an unordained person of having committed a wrong doing or of falling aw

views. The topic of unfounded charges is a complex one, and has already been cove
under Sanghadisesa 8. Additional points may be inferred from the discussion of that rule,
being that intention is not a factor here, and the change in effort -- one is accusing the ot
bhikkhu of a sanghadisesa or lesser offense -- changes the seriousness of the penalty.
Non-offenses. As under Sanghadisesa 8, there is no offense if one makes the accusation
else to make the accusation -- when one thinks it to be true, even if it turns out that the c
bhikkhu is actually not guilty of the offense. Summary: Making an unfounded charg
bhikkhu -- or getting someone else to make the charge to him -- that he is guilty of a
sanghadisesa offense is a pacittiya offense. * * *

77. Should any bhikkhu purposefully provoke anxiety in (another) bhikkhu, (thinking,)
even for just a moment, he will have no peace" -- if doing it for just this reason and
other -- it is to be confessed. The Vinaya Mukha's explanation for this rule is worth quotin
length: "There are people who normally tend to be anxious about one thing or ano
someone speaks to a bhikkhu such as this of contingencies that run counter to the Bud
ordinances and are impossible to know -- e.g., 'When you were ordained, how can you
qualifications (for a valid formal act) were fulfilled? If they were lacking, doesn't tha
mean you aren't really ordained?' -- even this is enough to set him worrying, giving him
sorts of anguish. A bhikkhu who is unrestrained and who -- looking for fun with no conc
his friends will suffer -- takes such matters to tell them, is penalized with a pacittiya
this rule." The full offense here has three factors. 1) //Object//: another bhikkhu.
2) //Effort//: One mentions that he might have broken a rule unknowingly. 3)
//Intention//: One's purpose is to cause him anxiety, even if just for a moment. Objec
bhikkhu here is grounds for a pacittiya; an unordained person, grounds for a dukkata.
The Vibhanga gives a few examples of rules the other person might have broken unknowi
drunk liquor, may have eaten food at the wrong time, or may have sat in private with a w
without knowing it. (Although this last would not be an offense if done unknowingly, it is clo
an offense that the mention of the possibility would cause an ignorant bhikkhu anxiety.)
origin story, some group-of-six bhikkhus made insinuating remarks to the group of 17 that
ordained when they were less than 20 years old, they were not really ordained. (Again,
group of 17 were the instigators for that rule, they were not subject to it.) All of this shows
this factor is fulfilled by any statement one might make to another bhikkhu insinuating that
broken a rule, even if the action one mentions is not strictly speaking an offense. Inte
If, not wanting to cause the other person anxiety, one has other reasons for mentioning ru
have broken unknowingly -- e.g., one seriously thinks that he may have been improperly
there is no offense. Summary: Saying to another bhikkhu that he may have broken
unknowingly, simply for the purpose of causing him anxiety, is a pacittiya offense.
* * * 78. Should any bhikkhu stand eavesdropping on bhikkhus
when they are arguing, quarreling, and disputing, thinking, "I will overhear what the

if doing it for just this reason and no other -- it is to be confessed. "Now at that tim
some group-of-six bhikkhus were quarreling with the well-behaved bhikkhus. The well-
(meeting among themselves) said, 'These group-of-six bhikkhus are shameless. T
you can argue with them.' "Later, the group-of-six bhikkhus said to them, 'Why
disgrace us by calling us shameless?' "'But how did you overhear?' "'We
stood eavesdropping on you.'" The factors for the full offense here are three. 1) //Obj
other bhikkhus who are involved in an argument over an issue. 2) //Effort//: One sta
eavesdropping on them, 3) //Intention//: with the purpose of using what they say agai
either in a formal act (reproving, reminding, or reprimanding them) or simply to make them
or ashamed. Object. According to the Vibhanga, the words, //arguing, quarreling, a
disputing// refer to arguments over issues (see Pacittiya 63). The Commentary says that t
one kind of issue -- disputes -- but accusations would appear to fit here as well. Th
factor is fulfilled regardless of whether the two parties in the dispute/accusation are confro
other or -- as in the origin story -- one party is talking in private. It is also fulfilled
regardless of whether or not one is already involved in the dispute oneself. Bhikkhus
in an argument are grounds for a pacittiya; unordained people involved in an argument, g
dukkata. Perception -- e.g., whether or not one perceives the bhikkhus as bhikkhus -- is
mitigating factor here. People who are not involved in an argument are not grounds fo
offense. Thus there is no penalty in eavesdropping on a Dhamma talk or on a bhikkhu sit
with a woman, to see what they will say to each other. Effort. The Vibhanga goes in
amount of detail on this factor, allotting the offenses as follows (assuming the other facto
fulfilled as well): One goes with the purpose of eavesdropping on the other party (%):
dukkata. One stays in one place eavesdropping on them: a pacittiya. One is wal
the other part, and speeds up one's steps to overhear them: a dukkata. One stays in o
eavesdropping on them: a pacittiya. One is walking ahead of the other party and
to overhear them: a dukkata. One stays in one place eavesdropping on them: a p
One is sitting, standing, or lying down in place, and the other party happens to walk
One should cough, clear one's throat, or (the K/Commentary states) say, "I'm here." N
so entails a pacittiya. At present, surreptitiously reading another person's mail would
to fulfill this factor as well. Intention. According to the Vibhanga, there is no offense if
happens to overhear bhikkhus arguing and goes away thinking, "I won't get involved," or
myself" ("by declaring my innocence," says the Commentary). Summary: Eavesdrop
involved in an argument over an issue -- with the intention of using what they say a
them -- is a pacittiya offense. * * * 79.
Should any bhikkhu, having given consent (by proxy) to a formal act carried out in acco
rule, later complain (about the act), it is to be confessed. "Now at that time some
group-of-six bhikkhus were indulging in bad habits but protested when a formal act was
carried out against any one of their group. Now it happened that the Community was m

other business, and the group-of-six bhikkhus, involved in making robes, sent their with one of their members. Then the Community, thinking, 'Look, friends, one of the gro has come alone. Let's carry out a formal act against him,' did just that. "He then returned to where the group-of-six bhikkhus were staying. They asked him, 'What, Community do?'" "'They carried out a formal act against me.' "'That wasn't what we gave our consent for, that they would carry out a formal act against you known that they would carry out a formal act against you, we wouldn't have given o consent!'" Formal acts. A formal act is a procedure the Community follows in settling the four kinds of issues: disputes, accusations, offenses, or duties. The Vinaya gives the settling each of the various issues falling into these four categories: the minimum numb bhikkhus that has to be present, the qualifications (positive or negative) of the individual o warranting the act, and the formal procedure -- a declaration, a motion, a motion with on announcement, or a motion with three announcements -- to follow in carrying out the act. out in accordance with these patterns is said to be carried out in accordance with the rule However, for a formal act to be valid and irreversible, it must be carried out not only in acc the rule, but also by a complete assembly (Mv.IX.2.4). This point is to prevent small fact carrying out acts as they like. When this point was first raised, the question arose, How m are needed for an assembly to be complete? All the bhikkhus in the world? All the bhik particular monastery? The Buddha's answer was, All the bhikkhus in a monastery, and he for the bhikkhus to delineate boundaries (//sima//) so as to determine who did and did no join in the act for the assembly to be complete (Mv.II.5.2,6.1,12.7). Later, he gave permiss ill bhikkhu living within the boundary did not have to attend the meeting, but could give h by proxy, through word or gesture, and the assembly would still be regarded as complete Thus a complete assembly is defined as follows: All the bhikkhus within the boundary present at the meeting (sitting within 1.25 meters of one another in the meeting) or have g consent by proxy, and no one makes a valid protest against the act's being carried out (Mv invalid protest would be one made by someone who is not a bhikkhu, by a bhikkhu who is possessed by a spirit, outside the boundary, or suspended from the Community, or by the whom the act is being carried out (Mv.IX.4.7-8).) Before we go on to discuss this rule are a few added points concerning the origin story we should touch on: 1) When a bhi valid protest, he does not need to justify it. In other words, he can make protest simply he doesn't agree with the act, and his protest stands regardless of whether or not he basis for it in the Dhamma and Vinaya. 2) One Community may not carry out a for against another Community (Mv.IX.2.3). What this means is that they may carry it no more than three bhikkhus at a time. This is why the group-of-six bhikkhus were able another from being subject to a formal act, for there were usually more than three o any one meeting of the Community. Even though the ones against whom the formal ac out had no right to protest, their friends did, and they took advantage of their right.

3) In the passage where the Buddha gives permission for bhikkhus to give their cons
(Mv.II.23.1-2), he states that this permission applies to ill bhikkhus. Yet in the origin
stories to this rule and the following one, the group of six are not ill, they give their cons
proxy, and the act carried out with their consent is considered to be valid. None of the
texts make note of this point, but it seems to indicate that //ill// in this context covers not
physical illness, but also any other serious inconvenience that prevents one from jo
the meeting. The factors for the offense under this rule are three. 1) //Object//: a
valid formal act to which one has given one's consent. 2) //Perception//: One percei
valid. 3) //Effort//: One complains about it. Object & perception. The various
permutations of these factors are as follows: a valid act that one perceives to be valid
grounds for a pacittiya; an invalid act that one perceives to be valid: grounds for a
dukkata; an act that one is doubtful about, regardless of its actual validity: grounds fo
dukkata; an act that one perceives to be invalid, regardless of its actual validity: grou
no offense. Effort. Any expression of displeasure with the act would fulfill this factor.
however, one states that the act was not carried out in accordance with the rule, then rega
whether or not one had given one's consent, the case would fall under Pacittiya 63, rath
Non-offenses. There is no offense in complaining about the act if one perceives it as
been carried out not in accordance with the rule, by an incomplete assembly, or against so
not warrant such an act. This exemption holds regardless of whether, in fact, the act wa
not. Summary: Complaining about a formal act of the Community to which one ga
consent -- if one knows that the act was carried out in accordance with the rule -- is a
pacittiya offense. * * * 80. Should any
bhikkhu, when deliberation is being carried on in the Community, get up from his seat a
without having given consent, it is to be confessed. The origin story here is a sequel
one for the preceding rule. "Now at that time the Community was meeting on some
and the group-of-six bhikkhus, involved in making robes, sent their consent with one of
Then the Community, thinking, 'We'll carry out the formal act (against the one mem
group-of-six) that was our //real// purpose in meeting,' set forth a motion. The bhikk
thinking, 'It's just in this way that they carry out formal acts against us one at a time. We
are you going to carry out //this// act against?' -- without giving his consent, got up f
his seat and left." As explained under the preceding rule, a bhikkhu has no right to pro
the Community is carrying out a formal act against him. However, the Community may no
against a bhikkhu who is not in its midst (see Adhikarana-Samatha 1), and any act is inv
carried out when there is a bhikkhu within the boundary who is not in the meeting and who
his consent. The bhikkhu in the origin story took advantage of these two principles to es
the formal act being carried out against himself, and the Buddha then formulated this rule
penalty on any bhikkhu who tried the same maneuver in the future. There are four fac
full offense. 1) //Object//: A formal act has been started but has yet to be finished, an

being carried out in a valid manner. 2) //Perception//: One perceives it as being carrie
valid manner. 3) //Intention//: One wants to invalidate the act or to keep the group
carrying it out. 4) //Effort//: One goes beyond one //hatthapasa// (1.25 m.) from the b
sitting in the meeting, without having first given one's consent. Object & perception.
various permutations of these two factor are as follows: a valid act that one perceives
valid: grounds for a pacittiya; an invalid act that one perceives to be valid: grounds f
dukkata; an act that one is doubtful about, regardless of its actual validity: ground
a dukkata; an act that one perceives as invalid, regardless of its actual validity: grou
no offense. According to the Vibhanga, the time period covered by this factor begins a
where the matter has been brought up in the Community -- or a motion has been set forth
the Community's decision has been announced. The Commentary, in discussing this
that, in the case of an accusation, the point when the matter has been brought up is whe
have stated their initial positions, and a bhikkhu has been authorized to cross-examine the
Effort. The Vibhanga divides the effort here into three parts and allots the penalties as
One gets up to go: a dukkata. One reaches the distance of one //hatthapasa// from t
another dukkata. One passes beyond the distance of one //hatthapasa//: a pacit
The K/Commentary adds that one must also remain within the boundary (//sima//) for th
fulfilled, but the Vibhanga makes no mention of this, and there seems no reason to adop
did adopt it, it would mean that if a formal act were being carried out against a bhikkhu, an
meeting and the boundary to avoid it, he would be committing no offense. Thus it seems
stick with the Vibhanga and say that this factor is fulfilled when one goes beyond one hatth
from the meeting, regardless of whether one then stays within the boundary or not.
Intention. There is no offense if, without giving one's consent, one leaves the meeting for
other than to invalidate the act. Examples in the Vibhanga include: One is ill. One h
do something (e.g., prepare or give medicine) for one who is ill. One is overcome with
to urinate or defecate. One leaves, without desiring to invalidate the act, with the thou
"I'll come right back." In all of these cases, though, if possible, it is best to give one's
consent before going. Non-offenses. In addition to the above cases, there is also no
if one leaves a meeting without giving one's consent with the purpose of invalidating the ac
perceives that: the act will lead to quarreling, a crack, or a split in the Community; o
the act is being carried out not in accordance with the rule, by an incomplete assembly
against/for a person who doesn't warrant it. Summary: Getting up and leaving a m
the Community in the midst of a valid formal act -- without having first given one's c
to the act and with the intention of invalidating it -- is a pacittiya offense.

* * *

81. Should any bhikkhu, (acting as part of) a Community in
concord, give robe-cloth (to an individual bhikkhu) and later complain, "The bhikkhus
the Community's gains according to friendship," it is to be confessed. Apportioning th
Community's gains. The Cullavagga (VI.15.2) contains a passage saying that no one -- no

Community itself -- can take any of the following items belonging to the Community and
to individual ownership: monasteries or monastery land; dwellings or land on which dwelli
furnishings, such as couches, chairs, or mattresses; metal vessels or tools; building mate
articles made of pottery or wood. The collective term for these goods is //garubhanda//, or
articles. The penalty for handing any of the Community's garubhanda over to individual ov
thullaccaya. In the origin story to Parajika 4, the Buddha states that a bhikkhu who gives t
Community's garubhanda to a lay person is one of the five great thieves in the world.
articles (//lahubhanda//) belonging to the Community, though, may be turned over to indivi
-- of a bhikkhu or novice -- but only when the proper procedures are followed. The usua
to appoint a Community official, through a formal act, to be responsible for making sure tha
be distributed fairly to the members of the Community eligible to receive them. Such offi
include distributors of robe-cloth, of food, of fruit, of non-staple foods, and of small accesso
as scissors, sandals, water strainers, etc. (Cv.VI.21). In addition, this training rule sh
that a Community acting as a whole may take light articles belonging to it and turn them ov
individual bhikkhus or novices. (According to the K/Commentary to Pacittiya 79, this can b
simple declaration (//apalokana//), although the kathina ceremony, which would fall unde
category, follows the pattern of a motion with one announcement.) A typical example, apa
kathina, would be if the Community receives a particularly fine piece of cloth and, instea
it up to share the pieces out among the members, decides to present the entire piece to on
who has been especially helpful to the group. This is one way in which the Community r
Community official for his services. Any member of the Community who disagrees with
may prevent it from happening by protesting during the declaration. The purpose of this
prevent members of the Community from complaining, after the they have taken part in su
the Community was acting out of favoritism. The factors for the full offense are two.
1) //Object//: One has acted as part of a Community that has given robe-cloth to a bhikkh
chosen, through a prior formal act, to be a Community official. 2) //Effort//: One com
afterwards that the Community acted out of favoritism. Object. //Acting as part of a
Community// means that one is in communion with the Community that handed over the cl
was in the same boundary with them: i.e., one was either in the meeting or had given one
it. //Robe-cloth// means a piece of any of the six kinds of allowable cloth, measuring
four by eight fingerbreadths. The various permutations of articles and recipients are as
follows: Complaining when the Community has given robe-cloth to a Community c
pacittiya. Complaining when the Community has given any other light article to a Com
official: a dukkata. Complaining when the Community has given any light article -- cl
otherwise -- to a bhikkhu who is not a Community official or to a novice: a dukkata.
Perception is not a mitigating factor here. For example, if the recipient was made a Comm
through a valid formal act, then regardless of how one perceives that act, it has no effect o
penalty under this rule. (The Vibhanga is somewhat confusing on this point, not saying ex

the factor of "perception with regard to the formal act" refers to the act by which the offic appointed or to the act by which the cloth was handed over to him. The first interpretation the only one that makes sense in light of the no-offense clauses, and the K/Commentary it is the correct one.) Effort. This factor is fulfilled by any expression of personal displeasure with the Community. If, however, one accuses the Community of having carri improperly -- not in accordance with the rule, or with an incomplete assembly -- the case not here, but under Pacittiya 63. Non-offenses. The Vibhanga says that if the article // given out of habitual favoritism, anger, delusion, or fear, there is no offense in complainin is the use of giving it to him? After receiving it he'll ruin it; he won't take proper care of it." Notice, however, that even in cases of this sort one is allowed to criticize only the recipient the Community -- for, after all, one had one's chance to protest during the meeting, but r silent. Summary: After participating in a formal act of the Community giving robe- a Community official: Complaining that the Community acted out of favoritism is a offense. * * * 82. Should any bhikkhu knowingly divert to an individual gains that had been allocated for the Community, it is to be confess This rule has already been explained under NP 30. Summary: Persuading a donor to individual a gift that he or she had planned to give to a Community -- when one kno was intended for the Community -- is a pacittiya offense * * * * * * * *

CHAPTER EIGHT

Part Nine: The Treasure Chapter ~~~

father, or the father from the son. The thought occurs to them, "No one enters here but
forth. Could this be the work of the one gone forth?".... 6 & 7) "And furthermore, t
king establishes one from a low position in a high position...(or) one from a high positior
low position. The thought occurs to those displeased by this, "The king is on familiar t
one gone forth. Could this be the work of the one gone forth?".... 8) "And furtherm
the king sends the army out at the wrong time. The thought occurs to those displeased

forth?".... 9) "And furthermore, the king sends the army out at the right time, but ha
turn around mid-way. The thought occurs to those displeased by this, "The king is on fa
with one gone forth. Could this be the work of the one gone forth?".... 10) "And
furthermore, bhikkhus, the king's inner palace is crowded with elephants...horses...chari
are enticing sights, sounds, smells, tastes, tactile sensations unsuitable for one gor
This, bhikkhus, is the tenth danger for one who enters the king's inner palace.'" Su
Entering a king's sleeping chamber unannounced, when both the king and queen are in
pacittiya offense. * * * 84. Should any
bhikkhu pick up or have (someone) pick up a valuable or what is considered a valuable,
monastery or within a dwelling, it is to be confessed. But when a bhikkhu has picke
had (someone) pick up a valuable or what is considered a valuable (left) in a monas
a dwelling, he is to keep it, (thinking,) "Whoever it belongs to will (come and) fetch it." T
the proper course here. The purpose of this rule is to prevent a bhikkhu from picking u
misplaced valuables belonging to other people, except when he finds them in a monastery
as the origin story shows, there are dangers inherent in such an act even when done with
intentions. "Now at that time a certain bhikkhu was bathing in the Aciravati River. A
certain Brahmin, having placed a bag of 500 gold pieces on the dry ground, had bathed
and left, forgetting it. The bhikkhu, (saying to himself,) 'Don't let this bag of the Brahm
be lost,' picked it up. Then the Brahmin, remembering, rushed back and said to the
'My good man, have you seen my bag?' "'Here, Brahmin,' he said, and gave it to hin
"Then the thought occurred to the Brahmin, 'Now how can I get away with out giving th
reward to this bhikkhu?' So (saying,) 'I didn't have 500, my good man, I had 1,000!'
detained him for a while and then let him go." However, a bhikkhu who comes acros
valuable in a monastery or in a dwelling he is visiting -- if he does not pick it up -- may la
held responsible if it gets lost: Thus the two situations mentioned as exemptions in the rul
situations such as these, a bhikkhu is allowed even to pick up money and other items he
normally allowed to take. In fact, the Vinaya Mukha states that if he does not pick up the v
put it in safe keeping, he incurs a dukkata. None of the other texts mention this point, al
is probably justified on the grounds that the bhikkhu is neglecting his duty in not following t
course" here. The Vibhanga advises that if a bhikkhu has picked up a fallen valuab
this way and put it in safe keeping, he should take note of its features. (The Commentary

is a bag of money, he should open the bag and count how much it contains. The same
such things as wallets at present.) He should then have an announcement made, "Let hin
are lost." If a person comes to claim the item, the bhikkhu should ask him/her to describ
the person describes it correctly, the bhikkhu should hand it over. If not, he should tell the
"keep looking." If the bhikkhu is going to leave the monastery to live elsewhere, he shou
the item to another bhikkhu or -- if no suitable bhikkhu is available -- to a suitable lay perso
The Commentary adds that if, after a suitable length of time, no one comes to claim t
bhikkhu should have it exchanged for something of lasting use to the monastery. If, after t
owner does come to claim the item, the bhikkhu should tell him/her of the use to which it w
owner is satisfied, there is no problem. If not, the bhikkhu should arrange to have the own
compensated. The factors for the offense here are four. 1) //Object//: a valuable
anything considered a valuable that one finds left behind, except in a monastery or a dwel
is visiting. 2) //Perception//: One does not perceive it as discarded. 3)
//Intention//: One wants to keep it in safe keeping for the owner. 4) //Effort//: One pic
it up or has someone else pick it up. Object. The Vibhanga defines a //valuable// as je
silver. //What is considered a valuable// means anything that is of use to people. Items
these definitions at present would include money, wallets, watches, keys, eyeglasses, cam
According to the K/Commentary, if the owner has given one permission to take the artic
fulfill this factor. The Vibhanga defines //in a monastery// as follows: If the monastery
walled, then within the walls. If not, then in the immediate vicinity (according to the Comm
radius of one //leddupata// -- the distance a man of average height can throw a clod of di
-- around the monastery buildings). As for //in a dwelling//: If the area around the dwelling
then within the walls. If not, then in the immediate vicinity (according to the Commentary
distance one can throw a basket or a pestle (!) from the dwelling). For some reason,
Commentary says that if the item has fallen in an area of the monastery where many peop
e.g., the doorway to the Bodhi tree or public shrine -- one should not pick it up. What its
is here, is hard to say, but it does note that the Kurundi -- one of the ancient commentaries
agree with this position. It also notes that if someone asks to put his/her belongings i
safe keeping with a bhikkhu, the bhikkhu should not accept -- so as to avoid being respons
but if he/she leaves the things with the bhikkhu and goes off in spite of his objections or
giving him a chance to object, he should take the belongings and put them away in safe ke
Perception & intention. According to the Commentary, if one picks up money for one's
Community, or for anyone aside from the owner, the case would come under NP 18, rathe
same holds true with dukkata objects, such as jewels and semi-precious stones. This judg
would seem to hold only in the case where one perceives the money, etc., as thrown aw
not perceive it as thrown away, and one is not borrowing it or taking it on trust, the case w

has it picked up with the thought, "Whoever this belongs to will come for it." (%) Also
according to the Vibhanga, there is no offense in taking an item left behind anywhere if on
trust, borrows it, or perceives it as having been thrown away (%). The Commentary notes
these last three allowances apply only if the item is something a bhikkhu may normally tou
not, for instance, a dukkata or nissaggiya object as defined under NP 18. Summary:
valuable, or having it picked up, with the intent of putting it in safe keeping for the owner
-- except when one finds it in a monastery or in a dwelling one is visiting -- is a pacittiya
offense. * * * 85. Should any bhikkhu, without
taking leave of an available bhikkhu, enter a village at the wrong time -- unless there
suitable emergency -- it is to be confessed. As the origin story here indicates, the purpose
rule is to prevent bhikkhus from passing their time among householders talking of things
for a bhikkhu to discuss. The term used here, "animal talk," means worldly talk about "king
and, ministers of state; armies, alarms, and battles; food and drink; clothing, furniture, ga
and scents; relatives; vehicles; villages, towns, cities, the countryside; women and heroes;
gossip of the street and the well; tales of the dead; also, philosophical discussions of the p
future (this is how the Sub-commentary explains 'tales of diversity'), the creation of the w
of the sea, and talk of whether things exist or not." The Sub-commentary notes here that t
of these topics in such a way as to foster an understanding of the Dhamma -- e.g., discu
to illustrate the impermanence of worldly power -- is not improper. The factors for the
offense here are two. 1) //Object//: a village (this would include larger inhabited area
such as towns and cities, as well). 2) //Effort//: One enters the village at the wrong tim
without having taken leave of an available bhikkhu -- except when there is an emergency.
Object. The Vibhanga says that if the village as a whole is enclosed, everywhere inside th
considered to be in the village. If not, the area in the village includes all the buildings an
immediate vicinity. According to the Sub-commentary, this means everywhere within a 2 /
radius of the buildings. (One leddupata is the distance a man of average height can throw
dirt underarm.) If one is staying in a monastery located within a village or town, the a
covered by this factor begins at the boundary of the monastery. Effort. The Vibhang
the //wrong time// as from after noon until the following dawn. This rule thus dovetails with
Pacittiya 46, which deals with the period from dawn until noon on days when one has been

meal. Perception is not a mitigating factor here. Even if one perceives the time to be when it is actually after noon, one's actions would still fall under this rule. As under Pacittiya 46, another bhikkhu is said to be available for taking one's leave if, in the Vibhang "It is possible to go having taken leave of him." That is, if there is another bhikkhu in the monastery, and there are no obstacles to taking one's leave from him (he is asleep, he is s receiving important visitors), one is obliged to go out of one's way to inform him. Acc to the K/Commentary, //taking leave// in the context of this rule means the simple act of inf other bhikkhu that, "I am going into the village," or any similar statement. In other words not asking permission to go, although if the other bhikkhu sees that one is doing somethin going, he is perfectly free to say so. If one treats his comments with disrespect, one incu least a dukkata under Pacittiya 54. (See the discussion under that rule for details.) Commentary states that if there is no bhikkhu in the monastery to take leave from, there is inform any bhikkhu one may meet after leaving the monastery. If many bhikkhus are going they need only take leave from one another before entering the village. For a new bh living in dependence (//nissaya//) on his mentor, though, taking leave //is// a matter of aski permission from his mentor at all times, "wrong" or not. The Mahavagga (I.25.24; II.21.1 one of the duties of such a bhikkhu is that he must receive permission from his mentor bef village, going to a cemetery, or leaving the district. Not to ask permission before going, o after being denied permission, is to incur a dukkata. As for the mentor, if he gives permiss his student to go when it is not appropriate, //he// is the one who incurs the dukkata. the suitable emergencies under this rule -- which would seem to exempt even new bhikkhu take leave from their mentors -- the Vibhanga gives the example of a bhikkhu rushing to make medicine for another bhikkhu bitten by a snake. Examples more likely at present wo rushing to get a doctor for a sick bhikkhu or to get help when a fire has broken out in the monastery. Further action. Although there is no penalty for engaging in "animal talk, bhikkhu who enters a village frequently and engages in it, even if he takes leave of other b be subject to an act of censure for "unbecoming association with householders" (Cv.I.4). Non-offenses. There is no offense in entering a village when one has taken leave of anoth in going when one has not taken leave if -- There is an emergency. There is no b available (e.g., one is living alone; all the other bhikkhus have left; all the bhikkhus in the monastery are going together). One is on one's way to another monastery (%), to quarters, to the residence of people ordained in another sect or religion (located in village, says the Commentary), or one is returning from any of these places. One i along a road that happens to pass through a village. (According to the Commentary, a wants to leave the road and enter the village proper should take leave of another bh one is available.) There are dangers. (Examples in the Commentary include seeing tigers approaching, or clouds building up and threatening a storm.) Summary: En village, town, or city during the period after noon until the following dawn, without having

taken leave of an available bhikkhu -- unless there is an emergency -- is a pacittiya offe

* * * 86. Should any bhikkhu have a needle case made of bone, ivory, or horn, it is to be broken and confessed. The origin story here echoes th NP 22. "Now at that time a certain ivory-worker offered an invitation to the bhikkhu any of the masters need a needle case, I will supply them with needle cases.' So the asked for many needle cases. Those with small needle cases asked for large ones; tho ones asked for small ones. The ivory-worker, making many needle cases for the bl not able to make other goods for sale. He could not support himself, and his wife and children suffered." There are three factors for the full offense here. 1) //Object//: a needle case made of bone, ivory, or horn. 2) //Effort//: One acquires it after making it o it made 3) //Intention//: for one's own use. Object. Anything aside from a needle -- such as a fastener or ointment box -- is not grounds for an offense here, even if it is m bone, ivory, or horn. Effort. The permutations under this factor are as follows: the a making the needle box or having it made -- a dukkata; acquiring the finished box -- a paci last penalty applies regardless of whether the box was made entirely by oneself, entirely or whether one finished what others began or let others finish what one began oneself. In must break the case before confessing the offense. Intention. There is a dukkata in bone, ivory, or horn needle box made for the sake of another person; and in making such having it made -- for another's use. The general principle. The Vinaya Mukha derives principle from this rule: The Buddha, in formulating this rule, was putting a halt to the sort that can occur among bhikkhus when certain requisites become fashionable to the point o inconveniencing donors, and senior bhikkhus at present should try to put a halt to any sim Summary: Acquiring a needle box made of bone, ivory, or horn after making it -- or made -- for one's own use is a pacittiya offense requiring that one break the box be confessing the offense. * * * 87. When a bhikkhu is making a new bed or bench, it is to have legs (at most) eight fingerbreadths long -- usin Sugata fingerbreadths -- not counting the lower edge of the frame. In excess of that it is down and confessed. Tall furnishings. The purpose of this rule is to prevent bhikkhu making and using furnishings that are high and imposing. The Canon contains many with furnishings, especially in the Khandhakas, and since furnishings in the time of the Bu somewhat different from what they are now, it is often a matter of guesswork as to what, p rules are referring to. The //bed// (//manca//) in this rule almost certainly refers to what we by a bed. The //bench// (//pitha//), according to the K/Commentary, is shorter than a bed, short that it is square. This comment comes from the passage in the Cullavagga (Cv.VI. allows bhikkhus to use an //asandika// -- apparently a square stool, large enough to sit on on -- even if the legs are long. Another piece of furniture with long legs allowed in the sa passage is the //sattanga//, a chair or sofa with a back and arms. The Vinaya Mukha inclu //pancanga// -- a chair or sofa with a back but no arms -- under this allowance as well. T

and commentaries make no mention of this point, but it seems valid: Armless chairs and s
imposing than those with arms. The factors for the offense here are three. 1)
//Object//: a bed or bench whose legs, measuring from the lower side of the frame to the f
longer than eight Sugata fingerbreadths (approximately 16.6 cm.) 2) //Effort//: One a
it after making it or having it made 3) //Intention//: for one's own use. Object. As
mentioned above, Cv.VI.2.4 shows that stools, as well as chairs and sofas with backs -- w
arms -- would not fulfill this factor. The Sugata measures are a matter of controversy
discussed in Appendix II. For the purposes of this book, we are taking the Sugata span
and since there are twelve Sugata fingerbreadths in a Sugata span, that would put eight S
fingerbreadths at 16.6 cm. Effort. The permutations under this factor are as follows: t
of making the bed/bench or having it made -- a dukkata; acquiring the finished article -- a
This last penalty applies regardless of whether the bed/bench was made entirely by one
by others, or whether one finished what others began or let others finish what one began o
case, one must cut down the legs to the proper size before confessing the offense.
Intention. There is a dukkata in making a bed or bench with extra long legs -- or having it
the sake of another person, and in using such a bed or bench made for another's use. Th
penalty would seem to apply only inside the monastery, for Cv.VI.8 allows bhikkhus to sit -
lie down -- on furnishings in a lay person's house even if the furnishings are the sort not
in the monastery. There are three exceptions to this allowance, the one piece objected to
its height being the //asandi// -- apparently a square platform, large enough to lie on, and
high. Bhikkhus are not allowed to sit on such a thing, even in a lay person's house.
Non-offenses. There is no offense in making a bed or bench -- or having one made -- if th
Sugata fingerbreadths or less; or in receiving a bed or bench with overly long legs if one
legs down to regulation size before using it. The Commentary notes that if one buries the
ground so that no more than eight fingerbreadths separate the ground from the lower fra
also allowable. Summary: Acquiring a bed or bench with legs longer than eight Su
fingerbreadths after making it -- or having it made -- for one's own use is a pacittiya offe
requiring that one cut the legs down before confessing the offense.

* * * 88. Should any bhikkhu have a bed or bench upholstered, it (the
upholstery) is to be torn off and confessed. Upholstery & cushions. Cotton down was app
luxurious material known in the Buddha's time for stuffing furniture, cushions, and mattre
inasmuch as bhikkhus are forbidden from making beds and benches upholstered with cott
this rule), and from sitting on cushions stuffed with cotton down, even in the homes of lay p
(Cv.VI.8). The only article of furnishing stuffed with cotton down allowed to bhikkhus is a
(%) (not a squatting mat, as translated in some places), although the pillow should be mad
the size of the head (Cv.VI.2.6). The Commentary's explanations of this point show
pillow used in those days was an oblong cushion, looking like a rectangle when viewed f
like a triangle when viewed from either the right or left side (like the old style of pillow still i

in Thailand). Such pillows, the Commentary says, should be no more than two cubits (1
and one span plus four fingerbreadths (32 cm.) from corner to corner on the sides. A bh
not ill may use such a pillow for his head and feet; an ill bhikkhu may line up a series of pil
them with a cloth, and lie down on them with no offense. Hair -- such as human hair
horse-hair -- was another forbidden form of stuffing. Cv.VI.8, in addition to forbidding bhik
sitting down on an //asandi// and cushions stuffed with cotton down, also forbids them fro
on a //pallanka// -- a couch stuffed with horse-hair -- even in the house of a lay person.
to Cv.VI.14, though, if the bhikkhus are presented with asandis, pallankas, and cushions s
cotton down, they may use the asandis after cutting the legs down to size, the pallankas
removing the hair stuffing, and the cotton-down cushions only after tearing them up and m
pillows. Mattresses and cushions stuffed with other materials, though, are allowed e
use in the monastery. Cv.VI.7 mentions five kinds of allowable stuffing: wool, cloth, bark,
leaves. (According to the Commentary, //wool// here includes all kinds of animal fur and
feathers. Goose down would thus be allowable. It also mentions that, according to the Ku
mattresses and cushions stuffed with these materials are allowable whether covered wit
cloth.) The purpose of all this is to keep bhikkhus from using furnishings that are extra
and ostentatious. As the Vinaya Mukha mentions, though, standards of what is extravaga
vary from age to age and culture to culture. Some of the things allowed in the Canon an
now seem exotic and luxurious; and other things forbidden by them, common and ordinary
policy, in a monastery, would be to use only those furnishings allowed by the rules and reg
unostentatious at present; and, when visiting a lay person's home, to avoid sitting on furnis
that seem unusually grand. The factors for the offense here are three. 1) //Object
bed or bench stuffed with cotton down. 2) //Effort//: One acquires it after making it or h
made 3) //Intention//: for one's own use. Object. Cotton down, according to the
Vibhanga, includes any cotton down from trees, vines, and grass. The Commentary to Cv
this as meaning cotton down from //any// plant, since "trees, vines, and grass" is the Cano
of covering all plant life. Kapok, flax fibers, jute, and cotton would thus all come under th
category. Because cotton-down cushions are forbidden in all situations, //bed and be
would seem to include all forms of furniture, including the stools, chairs, and sofas exempt
preceding rule. Effort. The permutations under this factor are as follows: the act o
making the bed/bench or having it made -- a dukkata; acquiring the finished article -- a pa
last penalty applies regardless of whether the bed/bench was made entirely by oneself,
others, or whether one finished what others began or let others finish what one began one
case, one must tear off the upholstery before confessing the offense. Intention. The
dukkata in making a bed or bench upholstered with cotton down -- or having it made -- for
another person; and in using such a bed or bench made for another's use. Non-offe
is no offense in using cotton down to stuff a pillow, a belt, a shoulder strap, a binding, or a
carrying the alms bowl; or to form the filter in a water strainer. If one obtains a bed or be

stuffed with cotton down made for another person's use, there is no offense in using it if or upholstery first. Summary: Acquiring a bed or bench stuffed with cotton down making it -- or having it made -- for one's own use is a pacittiya offense requiring that or the stuffing before confessing the offense. * * *

89.When a bhikkhu is making a sitting cloth, it is to be made to the standard measur the standard is this: two spans -- using the Sugata span -- in length, 1 1/2 in width, border a span. In excess of that, it is to be cut down and confessed. The origin story follows on the passage in Mv.VIII.16.3, where the Buddha allows bhikkhus to use a sitting to protect their robes from getting soiled by their furnishings, and their furnishings from g soiled by their robes and bodies. "Now at that time the Lord had allowed a sitting cloth the bhikkhus. Some group-of-six bhikkhus...used sitting cloths, without any limit in size, down in front and behind even on beds and benches." (As a result, the Buddha set 2 spans by 1 1/2.) Now, Ven. Udayin was very large. Setting out his sitting cloth in fror the Blessed One, he stretched it out on all sides before sitting down. The Blessed One 'Why is it, Udayin, that when setting out your sitting cloth you stretch it out on all sic like an old skin?' "Because the sitting cloth the Blessed One has allowed for the bhikkhus is awfully small.'" (Thus the Buddha added the allowance for the border.) three factors for the full offense here. 1) //Object//: a sitting cloth larger than the stand measure. 2) //Effort//: One acquires it after making it or having it made 3) //Intention//: for one's own use. Object. A sitting cloth, by definition, has to have a bor regardless of whether it is made of felted or woven material. However -- as none of the clear indication as to how many borders it should have or how they should be patterned -- definitive measurement as to how large the overall cloth should be. A wise policy, then, is origin story as a guide: Make the cloth large enough so that one can sit cross-legged or soiling one's robes or furnishings, but not so large that it extends out on any one side. Effort. The permutations under this factor are as follows: the act of making the sitting clot it made -- a dukkata; acquiring the finished article -- a pacittiya. This last penalty applie regardless of whether the cloth was made entirely by oneself, entirely by others, or whethe what others began or let others finish what one began oneself. In any case, one must cu cloth to the proper size before confessing the offense. Intention. There is a dukkata making an overly large sitting cloth -- or having it made -- for the sake of another person; a using such a cloth made for another's use. Non-offenses. There is no offense if one an overly large sitting cloth made for another person's use and cuts it down to size befor oneself. Summary: Acquiring an overly large sitting cloth after making it -- or havin made -- for one's own use is a pacittiya offense requiring that one cut the cloth down to before confessing the offense. * * * 90. When a bhikkhu is making a skin-eruption covering cloth, it is to be made to the standard measu the standard is this: four spans -- using the Sugata span -- in length, two spans in

In excess of that, it is to be cut down and confessed. Object. The Mahavagga (VIII.1
bhikkhus to use a skin-eruption covering cloth to protect their robes when they are suffe
boils, running sores, rashes, or "thick scab" diseases (large boils? psoriasis?). The Vibha
rule states that the cloth is to cover the area from the navel down to the knees, thus sug
the cloth is intended to be worn as an inner robe beneath the lower robe. As we already n
NP 1, one should determine these cloths for use when one is suffering from such a disea
under shared ownership when not. As mentioned under Pacittiya 87, above, the Sug
are discussed in Appendix II. Here we take the Sugata span to equal 25 cm., which wou
standard measurement for the skin-eruption covering cloth at 1 meter by 50 cm. If either o
measurements is exceeded, the cloth would fulfill this factor for the full offense. Eff
intention, & non-offenses. The permutations of these factors are the same as under the p
Summary: Acquiring an overly large skin-eruption covering cloth after making it -- o
it made -- for one's own use is a pacittiya offense requiring that one cut the cloth do
size before confessing the offense. * * * 91. When a
bhikkhu is making a rains-bathing cloth, it is to be made to the standard measurement.
standard is this: six spans -- using the Sugata span -- in length, 2 1/2 in width. In e
of that, it is to be cut down and confessed. Object. The rains bathing cloth has alread
discussed in detail under NP 24. Taking the Sugata span to equal 25 cm., the standard
the rains-bathing cloth would be 1.5 meter by 62.5 cm. If either of these measurements is
cloth would fulfill this factor for the full offense. Effort, intention, & non-offenses. The
permutations of these factors are the same as under Pacittiya 89. Summary: Acquiri
large rains-bathing cloth after making it -- or having it made -- for one's own use is a
pacittiya offense requiring that one cut the cloth down to size before confessing the offe
* * * 92. Should any bhikkhu have a robe made the size of
the Sugata robe or larger, it is to be cut down and confessed. Here, the size of the
robe is this: nine spans -- using the Sugata span -- in length, six spans in width. T
the size of the Sugata's Sugata robe. Object. The term //Sugata// -- meaning well-gone o
-- is an epithet for the Buddha. //Robe// is not defined in the Vibhanga but apparently n
of the three basic robes: the lower robe, the upper robe, and the outer robe. This raises
interesting point: Perhaps in the Buddha's time all three of the basic robes were approxim
same size. This would have made it much more convenient than it is at present to hold to
using only one set of three robes. When washing one robe, one could wear the other two
looking out of place. At any rate, taking the Sugata span to be 25 cm. would put the
the Buddha's robes at 2.25 m. by 1.50 m. -- much larger that the lower robes used at pres
smaller than present-day upper and outer robes. As we will see under Appendix II, v
theories have been offered over the centuries as to the length of the Sugata span. Begi
with the time of the Maha Atthakatha, one of the ancient commentaries, the Buddha was a
super-human height, and his handspan, cubit, etc., were assumed to be three-times nor

recently, within the last century or so, have Vinaya experts taken evidence from the Canon that the Buddha, though tall, was not abnormally so, and thus the estimate of the Sugata s shrunk accordingly. Still, the traditional estimates of the Buddha's height continue to infl size of the robes that bhikkhus wear today throughout the Theravadin countries; and altho movement in Thailand during the mid-19th century to return to the original size and style the earliest Indian Buddha images, the idea never caught on. Effort, intention, & non-offenses. The permutations of these factors are the same as under Pacittiya 89. Acquiring an overly large robe after making it -- or having it made -- for one's own use is pacittiya offense requiring that one cut the robe down to size before confessing the

CHAPTER NINE

Patidesaniya ~~~~~~~~~~~~~ This term means "to be acknowledged." As a name for training rules, it means "entailing acknowledgement." The rules here are unique in that they mention, as part of the rule, the words to be used in ac the violation; the second rule is especially unique in that it depicts the violators as acknowl their offense as a group. 1. Should any bhikkhu chew or consume staple or non-stap food, having received it himself from the hand of an unrelated bhikkhuni in an inhabited to acknowledge it: "Friends, I have committed a blameworthy, unsuitable act that o acknowledged. I acknowledge it." A long series of events led up to the formulation o rule. "Now at that time a certain woman whose husband was away from home was by her lover. She, having caused an abortion, said to a bhikkhuni who was dependent o family for alms, 'Come, lady, take this fetus away in your bowl.' So the bhikkhuni, havin fetus in her bowl and covering it up with her outer robe, went away. Now it so happ a certain alms-going bhikkhu had made this vow: 'I won't eat from the first almsfood I receive without having given some of it to a bhikkhu or bhikkhuni.' Seeing the bhikkhun her, 'Come, sister, accept alms.' "'No, master.' -- "A second time...A third time... "'No, master.' "'Look, sister, I have made this vow: "I won't eat from the first almsfood I receive without having given some of it to a bhikkhu or bhikkhuni." So c accept alms.' "Then the bhikkhuni, being pressured by the bhikkhu, took out her and showed it to him. 'You see, master: a fetus in the bowl. But don't tell anyone'.... (Of course the bhikkhu couldn't help but tell his fellow bhikkhus, and word reached th who formulated a double rule:) 'A bhikkhuni should not take a fetus in a bowl. I allo bhikkhuni, when seeing a bhikkhu, to take out her bowl and show it to him.' "Now a time some group-of-six bhikkhunis, on seeing a bhikkhu, would turn their bowls upside o him the bottom side....'I allow a bhikkhuni, when seeing a bhikkhu, to show him her side up. And she is to offer him whatever food there is in the bowl.'" (Cv.X.13) " at that time a certain bhikkhuni, on the way back from going for alms in Savatthi, seeing bhikkhu, said to him, 'Come, master, accept alms.' "'Very well, sister.' And he t everything. As the time (for alms-going) was almost up, she was unable to go for a was deprived of her meal. "On the second day...the third day...he took everything.... she was deprived of her meal. "On the fourth day, she went staggering along the roa rich merchant, coming the opposite direction in a chariot, said to her, 'Get out of the wa "She went and fell down right there. "The rich merchant apologized to her, 'I' sorry, lady, for making you fall.' "'It wasn't that you made me fall, householder. It's just that I'm weak.' "'But why are you weak?' "And she told him what had happened. The rich merchant, having taken her to his house and having fed l offended and annoyed and spread it about, 'How can the revered ones take food from bhikkhuni? It's difficult for women to come by things.'" There are two factors for the fu

offense here. 1) //Object//: staple or non-staple food that a bhikkhu has accepted from of a bhikkhuni -- unrelated to him -- while she is in a village area. 2) //Effort//: He eat the food. Object. Actually, there are two elements to this factor: the food sub-factor the bhikkhuni sub-factor. Under the food sub-factor: //Staple food// follows the standard d given in the Food Chapter under the pacittiya rules. //Non-staple food// includes all edib juice drinks, tonics, and medicines. Staple and non-staple food are grounds for a patidesa drinks, tonics, and medicines taken as food, grounds for a dukkata. As for the bhikkhu sub-factor: //Bhikkhuni// refers to one who has received the double ordination. A bhikkhu received only her first ordination -- in the Bhikkhuni Sangha -- is grounds for a dukkata. //Unrelated// means sharing no common ancestor back through seven generations. Perce or not the bhikkhuni is related is not a mitigating factor here. A //village area// is defin as a house or roadway in a village, town, or city. Effort. There is a dukkata in accept staple or non-staple food with the purpose of eating it, and in accepting juice drinks, toni medicine with the purpose of taking them as food; while there is a patidesaniya for every n staple or non-staple food one eats, and a dukkata for every mouthful one takes of the ju tonics, or medicine for the sake of food. Non-offenses. There is no offense if a bhikkhu eats food from a related bhikkhuni, and no offense in the following situations even if the is unrelated: She gets someone else to give him the food. She gives it by placing it ne in NP 18 and Pacittiya 41). She gives it to him in a monastery, nuns' quarters, a dwel members of other sects, or on the way back from such places. She gives it to him after the village. She gives him juice drinks, tonics, or medicine, and he uses them as such than as food. She is a female novice or probationer. Even in these cases, though, it w wise policy not to take so much of her food that she is deprived of a full meal. Summa Eating staple or non-staple food, after having accepted it from the hand of an unrelated a village area, is a patidesaniya offense.

* * *

2. In case bhikkhus, being invited, are eating in family homes, and if a bhikkhuni is st there as though giving directions, (saying,) "Give curry here, give rice here," then th bhikkhus are to dismiss her: "Go away, sister, while the bhikkhus are eating." If not one bhikkhus should speak to dismiss her, "Go away, sister, while the bhikkhus are eati bhikkhus are to acknowledge it: "Friends, we have committed a blameworthy, unsuitab that ought to be acknowledged. We acknowledge it." This rule refers to situations where invite bhikkhus to a meal, and a bhikkhuni stands giving orders, based on favoritism, as bhikkhus should get which food. The duty of the bhikkhus in such cases is to tell her to go even just one of them does, they are all exempted from the offense here. If none of them the following factors are fulfilled, they all incur the penalty and must acknowledge their offe group. Object. As with the preceding rule, there are two objects here: the food and th bhikkhuni. Any one of the five staple foods received in the above situation would fulfill the sub-factor. A bhikkhuni who has received double ordination would fulfill the bhikkhuni su

bhikkhuni ordained only in the Bhikkhuni Sangha would be grounds for a dukkata. E
is a dukkata in accepting the staple food received under such circumstances, and a patide
mouthful one eats. Non-offenses. There is no offense -- if the bhikkhuni gets othe
give her food to the bhikkhus; if she herself gives the food of other people to the bhikkhus
gets the donors to give food they have forgotten; if she gets them to give to a bhikkhu the
over; if she gets them to give the food equally to all; if she is a female probationer or no
or if she gets them to give anything but the five staple foods. Summary: Eating sta
accepted at a meal to which one has been invited and where a bhikkhuni has given dire

abode. 2) //Effort//: One eats the food. Object. The Vibhanga defines a //wildern
abode// as one at least 500 bow-lengths, or one kilometer, from the nearest village, mea
shortest walkable path between the two, and not as the crow flies. Such an abode is cons
thieves are known to be about, and risky if people are known to have been hurt or plund
//Staple food// follows the standard definition given in the Food Chapter under the pac
rules. //Non-staple food// includes all edibles except juice drinks, tonics, and medicines.
Staple and non-staple food are grounds for a patidesaniya; juice drinks, tonics, and medic
food, grounds for a dukkata. The Vibhanga gives specific instructions for how the gift c
should be announced. The donor(s) or a messenger must come to the abode and tell one
that a gift of food will be brought. The inhabitant must then tell the informant that the area
dubious and risky. If the informant says, "Never mind, the donor(s) will come anyway," the
the abode must tell the thieves, "Go away. People are coming to serve food." This is un
make the thieves go away but, as the Commentary explains, it absolves the bhikkhus from
if the thieves attack the donors. Even if the informant specifies that only certain type
food will be brought, anything that comes along with those foods counts as announced (
Commentary adds that if other people learn of the intended donation and bring food to add
food counts as announced as well. The Vibhanga also states that if the informant says a p
is coming to bring food, the announcement covers anything brought by any member of the
The Vibhanga makes clear that the announcement is valid only if the donor makes it in the
yard/compound. Thus, for example, if the donors announce their intended donation to the

he is in the village for alms, the donation is still considered unannounced. And, for the sar
such things as telephone calls, letters, and faxes would also not count. The Comme
that if the donors send a bhikkhu or novice to the monastery to announce the donation, it c
as announced. In other words, the messenger must be a lay person. Perception is
mitigating factor here. If the food is not properly announced, then regardless of whether o
it as properly announced or not, it still fulfills this factor. A bhikkhu counts as //ill// if
he is unable to go for alms. Effort. There is a dukkata in accepting staple or non-staple
with the purpose of eating it, or in accepting juice drinks, tonics or medicine with the purpo
them as food; a patidesaniya for every mouthful of the staple or non-staple food one eats;
dukkata for every mouthful one takes of the juice drinks, tonics, or medicine for the sake o
Non-offenses. There is no offense in eating food accepted in the monastery if one is ill
gift was announced. There is also no offense -- in using roots, bark, leaves, or flowe
growing in the abode; in eating left-over announced food or food given to one who is
accepting food outside the abode and eating it inside; or in accepting and eating juice drin
and medicines as such and not as food. The Commentary, in discussing these allo
makes the following points: 1) If lay people take any of the fruits, roots, etc., growing in t
abode and cook them at home, they must announce the gift before bringing them back to t
the donors, after announcing the gift, bring large amounts of food, some of it may be set
without presenting it to the bhikkhus -- to be presented on a later day. All of this caus
hardships in communities where everyone knows that they have to announce a gift of food
to the dangerous abode, but there are bound to be cases where donors do not know tha
dangerous or that they should announce their gifts before bringing them, and they are likel
the abode with unannounced gifts of food. In such cases, the Commentary recommends
the donor take the food outside the area of the abode, come back in to announce it, and th
bring the food back in to present it; or 2) have the donor take the food outside and have a
him/her out to accept it there. If order to minimize the need for doing this, though, it w
be a wise policy for a bhikkhu who finds himself living in such an abode to announce to a
supporters beforehand -- and ask them to spread the word -- that if they want to bring him
they have to come and announce them in advance. Summary: Eating an unannou
staple or non-staple food after accepting it in a dangerous wilderness abode when
ill is a patidesaniya offense. * * * * * * * *

----------Original message----------

Fellow members of the Buddhism Discussion Group:

This is the second "release" of my ongoing work on "The Study of Chinese Buddhism: The State of the Field," which is being prepared for the Association for Asian Studies Annual Meeting, April 2-5, 1992.

Since I posted the first bibliographic listing I have received several helpful responses, and by combining these and my own continued efforts the bibliography has grown from 85 entries to about 185 or so. (Thanks to Bob Sharf, Jamie Hubbard, Paul Swanson, Will Bodiford, and one person in Australia whose name and e-mail address I've managed to lose [Ciolek?] -- please remind me, because there was an offer to place these files on an ftp site there. [Sorry!])

Also, I have decided on a draft of my introduction and the overall organization of the text. What is included here is that introduction, the rest of the text in very rough outline form, and the bibliography.

The following is adapted from my first posting. If you're interested, please respond by indicating:

1. ADDITIONS: Papers, monographs, and books published in the last ten years or so pertaining to the study of Chinese Buddhism, as well as ongoing research projects or works in progress that will appear in the near future. I am interested in scholarship in European languages only, at this point.

2. CORRECTIONS: Emendations to the listing below, in the form of corrected author, title, and bibliographic information. (The bibliographic format used here is intended as that of the Journal of Asian Studies, although I may not have gotten all the details quite right.)

3. COMMENTS: Please feel free to include your own comments as to the value and significance of any of the works listed below, or that of any you might suggest as additions to the listing. Obviously, the real value of any bibliography or bibliographic review article lies in the annotation.

4. PROCEDURAL SUGGESTIONS: Any comments, advice, or suggestions regarding the procedure suggested just below.

My working plan is as follows:

A. I will update that list based on your feedback. Although I want to maintain control of the drafting of this paper, I will of course acknowledge your contributions, and I will post updated bibliographic listings as appropriate. Therefore, you may either reply to the discussion group or, to ease traffic on the net, directly to me. I will make sure everything gets posted, although I will edit comments.

B. This listing is done in ASCII format, with formatting codes omitted and no special procedures taken for diacritically marked characters, for easy distribution over this list. The current listing is a working version; please excuse me for taking the quick and dirty route once again.

NOTE: As Paul Swanson suggested, the "Chicago Guide to Preparing Electronic Manuscripts" (University of Chicago Press; companion to the "Chicago Manual of Style" that we all know and love), pp. 73ff. As Paul notes:

They suggest typing a "diacritical code" directly before the letter it will acce

C. In the future I hope to make the file available on an ftp (file transfer protocol) site I will establish through the Cornell University Chinese-Japanese-Korean Computing and Database Facility (CJK-CDF), of which I am the director. Either for the list or the ftp site, I will consider using either/both ZIP and uuencode formats. I would be pleased to receive suggestions about how to handle diacritically marked

characters.

Let me know what you think. I'll keep at this as long as your responses warrant. Thanks for your help.

QUOTING THIS PAPER WITHOUT PERMISSION WILL RESULT IN YOUR SPENDING TH
IMMEASURABLE EONS IN THE AVICI HELL, LISTENING TO ENDLESS RECITATIONS O
NEO-CONFUCIAN DOCTRINE!

I. INTRODUCTION

Undertaking this survey has allowed me to consider a wide variety of American and other English-language scholarship on Chinese Buddhism published during the past decade or so or now being readied for publication, and I have genuinely been impressed, simultaneously, with both the extent and the limitations of our accomplishments. My natural optimism reveals itself in the recognition of so many positive trends within the field, just as my inveterate tendency to doubt suggests that many crucially important subjects are being overlooked.

At the very outset I must mention one unmistakeable impression pertaining both to the study of Chinese Buddhism and to the state of American academia in general. Especially in the context of this panel (and proposed JAS paper) it is important to note the extent to which the study of Chinese Buddhism has profited in recent years from cross-fertilization with other areas of Chinese religious studies. Some of the most important work now being done involves the dimensions of Chinese Buddhist practice outside the Great Tradition, and indeed the intellectual climate in contemporary American academe is such that the study of non- mainstream, non-elite, popular, or diffuse religious practices, or those of the Little Traditions (to introduce a number of terms I will use synonymously throughout this essay), is now firmly entrenched on center stage.

The challenge this development brings to the field of Chinese Buddhist studies is twofold: first, how to incorporate and capitalize upon new

developments in the study of popular religion and cultural marginalization within our work and, second, how to understand relationships, both the creative and hegemonic, that occurred between the mainstream and non-mainstream components of Chinese Buddhism and Chinese religions as a whole.

In spite of the healthy momentum of the study of Chinese Buddhism per se, which benefits enormously from the vitality of the larger field of Buddhist studies in general and the historical status of Buddhism as an international religion, and in spite of the very high standard of excellence exhibited in recent scholarship on Chinese Buddhism, I would suggest that the field has been defined by our intellectual environment and forced into an essentially defensive role. Much as an election candidate may defined by his political opponents, the tasks of the study of Chinese Buddhism and the importance of Buddhism within Chinese history have been largely defined by a process of reaction to the very significant advances made in the study of Chinese Taoism and popular religion over the past decade or two, as well as by the writings of scholars working in the Confucian tradition who treat Buddhism as if it were largely irrelevant in the overall course of Chinese history and particularly in recent centuries.

I believe that those of us engaged in the study of Chinese Buddhism should turn this challenge around. Even as we work to improve and expand the perspectives of our own work, we should address ourselves to the field of Chinese religious studies as a whole to say: Just as we should not ignore the diffuse realm of religious practice within Chinese society in general in favor of the institutionalized traditions, so should those who study popular religion not perform the converse error. Too often the students of Chinese popular religion approach their subject with an unhealthy disregard for the mainstream tradition.

For example, David Johnson's seminal article on Chinese city-gods cites an anecdote that took place at Y -ch' an ssu involving a Buddhist monk named Chih-che Ta-shih, yet he never bothers to identify the individual in question as T'ien-t'ai Chih-i (538- 597), one of the most important figures in all of Chinese Buddhist history! (Johnson 1985:GET) Certainly, Leon Hurvitz's important study of the biography of Chih-i

would have benefitted by a consideration of his hagiographical image, just as Johnson's reference would have gained added meaning by the recognition of his subject's identity. My point is not to criticize either Johnson or Hurvitz, but to suggest that the walls dividing the study of mainstream and non-mainstream Chinese traditions should be torn down from both sides.

For the study of Chinese Buddhism, this means first to incorporate insights provided by new developments in the study of ritual, popular religion, etc., and from the fundamentally different perspectives of postmodern literary criticism and structuralist analysis. Second, it means that we should adopt this broader vision in order to bring something new to our intellectual communities, not merely new data for theories derived from non-Asian sources but new modes of interpretation gleaned from those sources themselves. In this exhortation I am borrowing the voice of Benjamin Schwartz, the eminent scholar of both traditional Chinese Confucianism and modern Chinese communism, who has often suggested in private conversation that students of Asian cultures should not merely apply western theories to their subjects of research but use their findings to generate new theoretical innovations.

But, third, I would also argue that we should persist in following courses of research that are important to the field of Chinese Buddhist studies in itself, without undue consideration of fashionable trends. Such research includes several forms of good old-fashioned scholarly work: editing, translating, and annotating important texts; compiling dictionaries, databases, and research tools; and writing detailed historical narratives and doctrinal analyses. However venerable our subject of study, it is still very young as a field of study in the English- speaking world, and there is still much to be done that is already considered old- fashioned in the overworked fields of Old and New Testament study, for example. Although I would applaud the expansion of research into all the new subject areas of the ten directions, we should not get too far ahead of ourselves.

The brief discussion above has suggested one paradoxical pair of challenges, both to benefit from and resist the impact of the contemporary emphasis on the popular realm. There are, however, several

other issues to be considered. There are in fact several identifiable challenges facing the study of Chinese Buddhism at the moment, or, perhaps, four areas of endeavor that are being undertaken by scholars as if to meet four identifiable challenges. I will adumbrate these briefly here, then refer to them occasionally throughout the body of this report.

[Note: I realize I'm going to have to clean up the enumeration scheme in this introduction.]

First, in addition to the continued need for greater sophistication in treatment of doctrinal works of the mainstream tradition, especially as unique products of the Chinese Buddhist tradition, we also need more research into the interactions and relationships between developments in the Chinese tradition and those in India and Central Asia. I believe that the time has come when we can and should expect a greater sensitivity to the intimate knowledge our Chinese subjects (including non-Chinese operating in the East Asian cultural sphere) must certainly have had regarding conditions in the Western regions. That is, we should now have the capacity to go beyond simplistic notions of "borrowing" and "influence" based on superficial considerations of textual transmission and imperial patronage. Our understanding of Buddhism and other vectors of religious activity in both India, Central Asia, Southeast Asia, and Tibet are increasing, and we should expect of ourselves a greater awareness of the dynamic relationships between these various realms. By adopting this greater sensitivity we should work to expand the boundaries of the Chinese Buddhist tradition, exploring systems and processes of interaction rather than allowing ourselves to conceive of China as a separate and isolated cultural entity.

Second, we should consciously recognize ourselves to be engaged in rewriting the paragigm of sinification and the periodization of Chinese Buddhism. We have lived far too long under the shadow of Arthur Wright's Buddhism in Chinese History of 1959 and Kenneth Ch'en's Buddhism in China: A Historical Survey of 1964. Both of these books are still useful -- Wright's especially for its description of the social, political, and intellectual setting of Han dynasty China into which Buddhism was introduced and the multi-dimensional impact of the religion during the

Six Dynasties period and Ch'en's for its relatively comprehensive sweep of the subject matter. But both of these books buy into Hu Shih's general conception of the overall contour of Buddhism in Chinese history, which basically boils down to the notion that Buddhism arrived when China was weakened by disunion and social chaos, thrived during a long period of political division, and was ejected when China became whole and healthy again. Fortunately, this simplistic and profoundly antipathetic interpretation is being assaulted on various fronts, as I will recount below.

Third, scholars in our field are already developing research tools based on the use of computer technology, which will introduce substantial changes in the way we go about our studies. These new tools will allow us to search large bodies of primary texts and secondary databases very quickly, discovering new correlations and testing hypotheses, and eventually even performing stylistic analyses. All these techniques are available in other fields of study, but the problems of the very large numbers of ideographs used in Chinese, Japanese, and Korean are now being surmounted.

As an example of the possibilities of this new technology, I have distributed preliminary versions of this paper and its attendant bibliography to the electronic discussion group devoted to Buddhism. Several scholars responded with additional bibliography and their own insightful comments, and I expect this collaborative process to continue right up until the publication of this paper. Indeed, those of you in attendance this evening have received a copy of the bibliography I have collected thus far, along with a request to cooperate in this electronic dialogue.

Those wishing to receive updates of this bibliography as they are distributed may either send an electronic mail message to me at jrm@cornella.cit.cornell.edu, or join the discussion group devoted to Buddhist studies. To do the latter, send mail to listserv@ulkyvm, with the only message being the line "subscribe buddha-l firstname lastname," where "firstname lastname" represents your personal name. (The listserv program will determine your e-mail address automatically.)

II. THE SOURCE LANGUAGES AND MATERIALS OF CHINESE BUDDHISM

A. ON THE EARLIEST CHINESE TRANSLATIONS OF BUDDHIST TEXTS

1. Kamata's work and (Wu 1988) on early Chinese Buddhist art 2. E. Zarcher's articles on early language 3. The work of W. South Coblin, Ted Pulleyblank, and Victor Mair 4. "Buddhism Across Boundaries" conference being organized by McRae and Nattier

B. DEVELOPMENTS IN MIDDLE CHINESE

1. Mair and Mei HJAS article on Sanskrit/Chinese prosody 2. Mei Tsu-lin's Late Middle Chinese language theories: contra recent JAS article on Neo-Confucian recorded sayings 3. Victor Mair's various stuff on transformation texts; relationship to Chinese literature and Chan

C. RE-EVALUATION OF INDIGENOUS SOURCES AND THE PROBLEM OF SINIFICATION

1. Nattier's observation of China as active customer of Mahayana; Buswell: process right from beginning 2. E. Z rcher's articles on early language 3. The work of W. South Coblin, Ted Pulleyblank, and Victor Mair 4. Schopen reworking filial piety shibboleths 5. Buswell's book on Vajrasam dhi 6. Buswell's book on apocrypha 7. Buswell's marga volume 8. Nattier on Heart S tra 9. Grosnick 1989 on CHL? 10. SU student translation project on HKSC? 11. Problem of sinification comes up again re Chan

III. DEVELOPMENTS IN CHINESE DOCTRINAL TRADITIONS

1. Madhyamika: (Hurvitz and Iida) and Dalia, both forthcoming 2. Hua-yen: (Gimello 1976) and (Gregory 1991) 3. T'ien-t'ai and Lotus Sutra tradition

Kim 1991

end of file

Offerings are a major part of the ritual of consecration and of many other Tibetan Buddhist rituals, but their nature clearly reveals their Indian origin. Offerings are made to acquire merit, but the recipient can be the poor and needy as well as lamas or deities. If the merit thus acquired is dedicated to the attainment of enlightenment, the offering becomes part of the practice of the perfection of giving.

Though elaborate offerings to deities who never seem to partake of them may seem wasteful to the sceptical, especially in the case of the ritual fire offerings during which everything is burned, such offerings are not merely meaningless ritual. the primary aim of Buddhist practice is to train the mind and this is the context in which the offerings should be understood. Whether physical offerings actually benefit the recipient or not, from the practitioners point of view they are an essential means of reducing the desire and greed which characterize our relationship with the physical world. Desire is to think that we would be satisfied if we were to obtain some object, and greed is to think we will be more satisfied if we can keep what we have obtained or gain more. Both passions tend to reinforce the notion of ourselves as real, independent selves to be satisfied. Making offerings accustoms the mind to giving, letting go of desirable objects, and serves to loosen our sense of clinging to a real and independent self. The merit derived from giving can be a cause in the short term for acquiring wealth, but ultimately for attaining enlightenment.

Offerings directed to certain deities, Buddhas, or Bodhisattvas create connections with them. In Sanskrit the word for offering is "puja" which means to please. Offerings please the Buddhas and Bodhisattvas, not because they are pleased to receive gifts, but because they delight in the virtue of the givers, which is determined by the quality of their motivation in making the offering. Offerings need not even be material. Milarepa offered his spiritual practice, his most cherished attribute. The best offerings are of virtuous accomplishments. Thus, the offering of religious practice is what most pleases the deities and creates a bond between them and the practitioner, which provides a basis for his/her further development.

Several factors determine the quality of an offering. Prominent is the giver's motivation, though the status of the recipient and the nature of the offering also contribute. The giver acquires the greatest merit when he/she

is motivated by a wish to attain enlightenment for the sake of all sentient beings. It is much less if he/she aspires for his/her own enlightenment alone and even less if he/she wishes merely to obtain a good rebirth in his/her next life. The poorest motivation is the wish to gain some benefits in this lifetime, such as wealth and a long life, or to be completely mundane in seeking a reputation for generosity.

The status of the recipient is an important factor. The merit gained by making an offering with absolutely pure motivation to a Buddha is immeasurable. Since images and other manifestations of the Buddhas and Bodhisattvas are to be regarded as no different from them in nature, making offerings such as are made to the mandala deities in the consecration rituals is equivalent to making offerings to the Buddhas. The Buddhas are exalted objects of offering because they are the ultimate source of refuge, not because they will snatch us out of cyclic existence, but because the teachings they demonstrate enable us to do so ourselves. One's own lama or teacher is also an exalted object of offering, because it is due to his personal kindness and guidance that one can make any progress on the path of development for the benefit of all sentient beings.

Nevertheless, since pure motivation is so important, a gift made with a very pure motivation to a needy person is also very meritorious. One can reflect that this needy person has at sometime been one's own kind mother or consider the fact that one depends on others to attain enlightenment, for without them one would have no opportunity to practice giving, ethics and forbearance, which are essential in the quest for Buddhahood. Thus it could be said that the merit obtained from making a modest gift to a needy person with an exalted motivation is far greater than one made to a Buddha with a poor motivation.

Whatever is offered should always have been honestly obtained, for a wrongly acquired object severely detracts from the wholesome quality of giving it. Offerings should always be of the best one has. Food offered to the Buddhas should not be bad or rotten on the pretext that no one will eat it. It is good to offer one's own food before eating it. Since the main purpose of making offerings is to reduce avarice, one should do so without a trace of regret. The Buddha recommended that avaricious people should initially accustom their minds to giving, by giving something from one hand

to the other.

Water is also commonly offered. Water is pure. the Indian master Atisha, who visited Tibet with profound effect in the eleventh century, praised the purity of water in Tibet, saying that simply by appreciating its excellent qualities one could offer it joyfully to the Buddhas. Water can easily and honestly obtained and when offering it one can imagine washing away the miserliness of all sentient beings.

TEISHO

John Tarrant Roshi

February 18, 1992

Center for Seven Generations
Occidental, California

Some of us clarify our insight early and then have to work on adapting

ourselves; have to work on what to do after that. Then we have to deepen our character.

Hui-Neng (Jap. Eno) was a great genius of zen. He was called the Sixth Great Ancestor in our tradition, that's the Sixth in China. His father had died and he was cutting wood to help support his mother and he overheard somebody chanting in the street a snatch from the "Diamond Sutra." Immediately he awakened. He had great ability and he became a teacher, but then he realized that there were some things he did not understand and he heard that there was a great teacher a couple of thousand miles to the north. So he made arrangements so that his mother would be well looked after and then he journeyed on foot to the north and met with his teacher. He was just sent into the hut to pound rice--the lowest level of the monastery--and he was a layperson, too, which made him even lower in those days.

Finally, he had an interview with the teacher and the teacher said, "Oh, you're a barbarian from the south. Barbarians from the south don't understand zen. (This is dear to my heart.) And he said, "Zen knows nothing of north and south." His teacher said, "Oh good, you can go and pound rice." And so he just worked away in the rice pounding hut.

Various things happened and through the course of this his teacher recognized him. And so the teacher gave him a robe and an eating bowl that had been handed down from Bodhidharma; that had come with Bodhidharma from India. It represented the Buddhist transmission. He gave it to him in the middle of the night and said, "People will be very unhappy about a southern barbarian getting this. It might be good for your health if you left immediately." Even so, a great general, who was one of the students, chased him for many weeks and caught up with him and tried to take the robe back, but that's another story of how Kway-nung then worked with that general and the general became his student.

But then Kway-nung lived with hunters in the forest for twenty years before he taught. So one of the things this emphasizes is that no matter how brilliant you are, you can always do with a little character work. He wasn't very eager to teach. He was very willing to learn and interested in learning. He was also very willing to help the poor

people of his time. Living with the hunters. They were considered to be pretty barbarous, you know, killing things for a living.

So other people say, "I have been working on my koan for twenty years and I have got nowhere. I am a failure." But the people who look at them think there whole life has changed and they have become wonderful people and the only thing wrong with them is that they think they're not. This is a different way. This is the way when the character work comes first and the insight will come in its time. I do not know that one is really superior to the other. I think in zen, in our tradition, in our Rinzai lineage which overvalued insight a little. So sometimes we've seen the spectacle of teachers and senior people who have poor character. But it really helps to have insight, too, so I don't want to value one against the other.

There is a funny koan about this matter; that is somewhat related to this matter. This is called "Spiritual Uncle Mi and the Rabbit." This is again from the Book of Serenity; it's the fifty-sixth story. The Introduction says:

> Better to be sunk forever than to seek the liberation of the saints.

And then it tells a couple of little stories.

> Devadatta experienced the bliss of the third meditation heaven while sunk in uninterrupted hell.

Even in hell.

> Whereas Udraka Ramaputra

I'm not acquainted with that person.

> Udraka Ramaputra fell from the heaven of the summit of existence into the body of a flying wildcat. Tell me where is the gain and where is the loss?

The Case:

> So Dongshan and his spiritual uncle, Uncle Mi he was called, were walking along and they saw a white rabbit run by in front of them. Uncle Mi said, "Swift!"
>
> Dongshan said, "How so?"

So already this conversation is starting to tilt again.

> Uncle Mi said, "It's like a commoner being made a prime minister."
>
> Dongshan said, "Such a venerable person as you still talking like that!"
>
> Uncle Mi said, "What would you say?"
>
> Dongshan said, "Here are generations of nobility temporarily fallen into poverty."

There is a very interesting comment-- You take this up as a koan and see how much they are appreciating this rabbit. The person who does the commentary on this has a very interesting take on it.

In the teachings there are two gates, natural and cultivated; in Dongshan's lineage this is called `using the accomplishment to illustrate the state'. Usually we awaken by means of cultivation, entering sagehood from ordinariness--a commoner is directly appointed a prime minister. If you're first enlightened and then cultivate afterwards, you enter ordinariness from sagehood. This is the traditional nobility--originally honorable though now drifting destitute in the myriad conditions, but the basic nobility it still there.

There are a couple of nice additional sayings to this case. When Uncle Mi says, "It's like a commoner being made prime minister." The additional saying is,

> It is easy to ascend into the sky from the ground.

There is another saying,

> To realize the road of emptiness may not be so difficult.
> To express the bare substance is hard.

That's a koan called, "The Sound of the Raindrops."

Another additional saying is when Dongshan says, "Generations of nobility, temporarily fallen into poverty." The additional saying is, Descending from the sky is hard.

But that, too, must be done.

So, I think that in zen different schools have emphasized different paths. Traditionally, the Lin-chi school, where our koan tradition dates from, has always emphasized: go for the insight and the rest will take care of itself. And to a certain extent that's true. Ts'ao-t'ung School, Soto School, which is also one of our lineages, has emphasized: live a life of faith and virtue, cultivating the fields, cultivating your own character and the insight will take care of itself. And sometimes that happens, too. But I say don't be attached to either one. Sometimes one is right and another time the next is right.

I think it is safe to say that when you are blocked in some way then that is character time. And honor being blocked. This is a wonderful virtue. If you were not so stupid, you never would have discovered this wisdom. So prize your stupidity. If I hadn't been so stupid, I would have been a successful lawyer in my hometown as my parents wished, but I was incapable of that. Alas! Alas! Alas!

On the other hand then, if the gate opens for you, when it does for everyone, then just walk through it. Some people when the gate opens, they spend a lot of time saying, "Oh my god the gate's open." And then they trip over and fall on their faces. I did this--I felt like I did this three or four times myself. I could feel, "Oh, this experience is coming." Damn, it wasn't coming anymore. I got too excited. But then you go forward. But don't cling to that, too. You'll find that when you

cling to that, the world will change and you will not change and then you'll be out of harmony with the world and you'll get tossed down into the body of a rabbit as they put it here. This is particularly so as you get further on in your zen practice. `The descent from the sky is difficult,' as they say. Do not try to hold on to the wonderful states; do not try to hold on to your treasure. If you do not hold onto it, you'll then discover that it is inexhaustible and it comes up in the most implausible of times when you are completely a mess. The treasure will be right there in your life. If you are holding onto it, I'm afraid all we can say is that you're holding onto it. That's what happened.

Hakuin's teacher used to call him a demon watching over a corpse in a cave. And you know that kind of meditation where you're doing it really well, and it's really intent, you're very focussed and, "Ah, the samadhi's getting better and I'm really peaceful now and I can see how vivid things are." Just a little bit more--if I watch that corpse a little longer, something will happen.

Hakuin's teacher said--Hakuin's teacher was considered a little difficult, but he had a student who was a friend of Hakuin and was impressed by Hakuin and who said to Hakuin, "Come along. It's hard to find a good teacher." So he said, "Come along and meet my teacher," and finally persuaded Hakuin. Then he had to persuade the teacher to meet Hakuin. Finally he did that, too, so he got these two difficult people together.

Hakuin came along and he had written out a great enlightenment experience. He thought greater than anyone had had since Shakyamuni Buddha and so he had written it out because he thought it was so important. And so he came along with this wonderful experience and presented it to the teacher and the teacher went "kkkkkt" (scrunching motion) scrunched it up and threw it down and said, "Show me; tell me." And Hakuin said, "There's nowhere to take hold of it." This is the commoner suddenly becoming prime minister. The whole world it vast, filling the universe. And the teacher grabbed his nose and twisted it hard and said, "I find it quite easy to take hold of it," and threw him down the steps. Hakuin was very angry and went away muttering to

himself, but finally decided the teacher may have something and he came back and meditated with him for a long time. And Hakuin said, "Finally I realized what the teacher was saying." And finally he was willing to come down from the mountain; to descend from the sky; to wear clothes and eat soup and find the sacredness right there. And he said, "I told the Master that I had many experiences. He just nodded and smiled. He never did give me transmission, but he stopped calling me an evil demon watching over a corpse." That was the extent of Hakuin's confirmation by his teacher.

So you can see that all the ways that we describe; all the great koans were the opening for somebody else and they can be the opening for you, but then it will be a unique and different koan when it is the opening for you. It will be your koan.

A student started quoting this wonderful poem, "the brilliance of the truth illuminates the whole universe." His teacher, I think it was Yun-men (Jap. Unmon) interrupted him and said, "Aren't those the words of someone else?" And the student said, "Yes, they are." So the teacher said, "Wrong!" and left. So you see when it comes to the koan, "Isn't that Mumon's koan?" "No, it's mine!" Who's Mumon? "No, they're my words; they're not the ancient poet's."

With this rabbit--this white rabbit--a very interesting person. Uncle Mi says, "Swift!" It's like saying, "Oh, the rain is here." That empty, idiotic state--just this. Just toc, toc, toc on the roof. How beautiful. We sit here in eternal time while the rain rains through us. While we rain all around on the fields. But Dongshan couldn't leave well enough alone and said, "How come? What do you mean?" And so then Uncle Mi said, "It's like a commoner being made prime minister." He sees the virtue in that rabbit. The virtue in the zen student sweating in the zendo, wondering if they can get away with moving or not because the Tanto will yell at them if they move. Thinking, "My god, hit the bell." Whatever, or just musing, dreaming along here, very close to the koan, working with the koan, having the koan working inside you. So that the koan walks around. So that's like the commoner being made prime minister. Suddenly the koan is walking around.

Dongshan, of course, values his uncle a lot so he says, "A venerable old person like you still talks nonsense." And Uncle Mi says, "Oh, what about you?" And Dongshan says, "Generations of nobility temporarily fallen into poverty." The bare substance of the raindrops. Just the raindrops. There is no emptiness, no fullness. There is no one even listening. There is just the great rain from the beginning of time. And each moment is always like this. How could it be any different.

And so then you get a certain amount of play happening. I'll give you two examples. The first case in the Book of Serenity:

> One day the World Honored One, which is Shakyamuni Buddha, ascended to the seat. Manjusri, the Bodhisattva of Great Wisdom, struck the gavel and said, "Clearly observe the Dharma of the King of Dharma; the Dharma of the King of Dharma is thus."

He went, bang (striking sound). Just like the rain.

> And so the World Honored One then got down from his seat and left.

His teisho had already been given. I thought of not coming and saying, "Well, the rain said it for me."

Here's another one.

> The World Honored One was walking with the community and pointed to the ground with his finger and said, "This would be a good place to build a temple."
>
> Indra, the emperor of the gods,

He had good students, I guess.

> took a blade of grass, stuck it in the ground and said, "The temple is built."
>
> The World Honored One smiled.

There is a saying: "Sometimes you use the 16 foot golden body of the Buddha as a blade of grass; sometimes you use the blade of grass as the 16 foot golden body of the Buddha."

So this is like the rabbit that is truly noble.

And then there is something else. I have spoken about Day-shan's (sp?) action in his later life when he would just teach just by what he was doing. Somebody would say, "The meal isn't ready. What are you doing here?" And he wouldn't say anything. He'd just turn around and go back to his quarters. It didn't matter if the meal was late or early or whatever. He would just flow with circumstances like that. This doesn't mean he was always agreeable. He was not considered an agreeable person, but he would flow with the Tao.

Bodhidharma, when he came from India, had an interview with Emperor Wu of Liang, which was at that time a large northern kingdom in China. Bodhidharma was interested in the emperor apparently, interested enough to have an interview with him. The emperor was interested in the dharma and he said,

> I have endowed many monasteries. What virtue, what merit have I accumulated?

He was interested in his status in the other world.

> Bodhidharma said, "Oh, no merit."

He could have said, "Fortunately no merit."

> The emperor said, "What is the highest meaning of the holy teaching?"

> Bodhidharma said, "Vast emptiness, nothing holy."

So that is like your rabbit. A commoner suddenly being appointed prime minister.

> Then the emperor getting more and more both curious and puzzled said, "Who is this before me?"
>
> And Bodhidharma said, "I do not know."
>
> And the emperor didn't understand. So Bodhidharma subsequently crossed the Yangtse River and came to Shaolin and sat facing a wall for nine years.

Afterwards the emperor wrote a poem, the emperor spoke to his adviser who said, "Do you know who that was, your majesty?" The emperor said, "No, I do not know him." The adviser said, "That was the Bodhisattva Avalokiteshvara bearing the mind seal of the Buddha." Think about that the next time you run across a crazy person in the street. The emperor said, "Oh, well let's send after him. His attendant said, "It's too late. You can send the whole kingdom after him and he won't return." And so the emperor wrote an epitaph:

> I saw him without seeing,
> I met him without meeting him--
> Now as of old
> I regret this.

And the comment here is rather touching.

> Even though His Majesty was just an ordinary man, he presumed to consider Bodhidharma his teacher in retrospect.

So even the emperor had some ability to turn around.

But Bodhidharma's not knowing, I think, is that deep not knowing. The emperor's not knowing is a different kind of not knowing. When his attendant says, "Do you know who that was?" He says, "I don't know." He just doesn't know. Bodhidharma's not knowing is that closeness and intimacy with the great mystery and the great emptiness underlying things. What about this rain? Why does it rain when we do sesshin? I don't know. Why do we do zazen? I've never been able to answer that question satisfactorily. What is it about life that is so lovely and so

compelling? Why is that we know, somehow, that it is deeply important? What we do counts. And to work on--to have a good character and to gain understanding is a great thing. Why is this? I do not know. Like the flowers coming up in spring. There is something utterly profound and beautiful about them without any reason. It is beyond anything that our understanding can grasp. So that is called true understanding. Yamada Roshi used to call it blindness. Fortunately, he is blind.

D. T. Suzuki, perhaps we should say in spite of being a great scholar, was also a legitimate zen master in the Rinzai line, and was considered highly in zen circles. His complimentary name that his teacher had given him was Daisetz, which means Great Donkey. I always appreciate that. Lin-chi's transmission statement to his great student San-sheng went like this:

> Lin-chi was dying and San-sheng was just sitting there by the bedside keeping him company.

A good thing to do when somebody's dying.

> And Lin-chi said, "After I'm gone please protect the essence of my true dharma."

> And San-sheng said, "Who would dare to do anything different?"

Again, as always with Lin-chi and his line, the air starts to thicken around the conversation.

> So Lin-chi says, "Okay."

Lin-chi is not one to spare you when he's dying.

> He says, "Okay, what will you say if somebody asks you about this matter; about my essence of true dharma?"

> And San-sheng went, "Ho!!!!" (Very loud.)

> And Lin-chi said, "Who would have thought that the essence of my

true dharma would be destroyed by this blind donkey?"

Many people didn't understand. Later they doubted whether San-sheng really had approval from Lin-chi, but that was Lin-chi's great praise. San-sheng knowing what Bodhidharma meant when he said, "I do not know."

So that when the world is dazzlingly clear, you just sit there in that dazzling clarity. And then you do not know either because there is no one there to know. Then again, the world is not dazzlingly clear and that is very clear to you. And then you are there and there is no one to know still. Still there is not knowing. And this not knowing goes on and on from before time until after we are gone. It is the most precious thing and the heart of it is the great love of the way.

From now on in sesshin, in your meditation, use any means you can to go deeper. Just really throw away all the things you have been holding on to. If you can't throw them away, then carry them with you. Go deeper, go deeper. And have that spirit of devotion and enjoyment of the way. It doesn't need to be grim at this stage in sesshin. Grimness and non-grimness are far in the past. Just yes; just this rain.

---

end of record

THE SIMILE OF THE CLOTH

Introduction

This discourse of the Buddha -- the seventh in the Collection of Middle Length Texts (Majjhima Nikaya) -- deals first with a set of sixteen defilements of the human mind; and in its second part, with the disciple's progress to the highest goal of Arahatship, which can be achieved if -- and only if -- these impurities are gradually reduced and finally eliminated. While there are also defilements of //insight// which must be removed for the attainment of the goal, the sixteen defilements dealt with here are all of an //ethical// nature and are concerned with man's //social behaviour//. Only the last of these sixteen, negligence, may also refer to purely personal concerns as well as to one's relations with others.

A glance through the list (see Note 2) will show that all these sixteen defilements derive from greediness and selfishness, from aversion, self-assertion and conceit, or their combinations. If we take, for instance, contempt, being a weaker nuance of (5) denigration, we see that aversion and conceit contribute to it; (7) envy is fed by greediness and aversion. The pairs of contributive factors here exemplified do not, of course, occur at the same moment of consciousness; but their repeated, separate presence favours the arising of such derivatives as contempt and envy. On the other hand, if those secondary defilements such as contempt and envy (and all the others) appear frequently, they will bring about a close serial association of their "feeders," as for instance hate motivated by conceit, or hate motivated by greed; and these may easily become habitual sequences, automatic chain reactions in our impulsive life.

Interlocked in such a manner, the negative forces in our mind -- the defilements, roots of evil, and fetters -- will become more powerful and much more difficult to dislodge. They will form "closed systems" hard to penetrate, covering ever larger areas of our mind.

What may first have been isolated occurrences of unwholesome thoughts and acts, will grow into hardened traits of character productive of an unhappy destiny in future lives (see Discourse Sec. 2). And in all these grave consequences, the secondary or derivative defilements have a great share. Hence it is of vital importance that we do not fall victim to the last in the list of those defilements -- negligence -- and are not negligent in watchfulness and self-control.

> "Out of regard for your own good, it is proper to strive with heedfulness; out of regard for others' good, it is proper to strive with heedfulness; out of regard for your own and others' good, it is proper to strive with heedfulness."
>
> (Nidana Samy., No. 22)

As to "others' good," how much more pleasant and harmonious will be human relations, individual and communal, if there is less pettiness and peevishness, fewer vanities and jealousies, and less self-assertiveness in words and deeds! As already remarked: if these minor blemishes are reduced, the larger and more serious defilements will have fewer opportunities. How often do deadly conflicts and deep involvement in guilt arise from petty but unresolved resentments!

The composition of our list of defilements alone makes it clear that the Buddha was well aware of the social impact of these impurities; and the structure of the discourse shows that he regarded the removal of these defilements as an integral part of the mental training aiming at deliverance. Hence we may summarise this part of the discourse by saying that //our social conduct strongly affects the chances of our spiritual progress//.

The nature of that influence is illustrated by the simile of the cloth. If the texture of our mind is tarnished by blemishes in our social behaviour, "the new colouring" of //higher mentality// (//adhicitta//) and //higher wisdom// (//adhipanna//) cannot penetrate. The stains that soil the single strands of thought will show through the superficial colouring; and besides, the impure matter win reduce the porosity of the tissue, i.e. the receptivity of our

mind, and thus prevent full absorption of any results gained in meditation or understanding. Through the accumulating "waste products" of uninhibited defilements, a mental atmosphere is created that resists any depth penetration of spiritual forces and values.

First, in accordance with the method of Satipatthana, right mindfulness, the presence of the defilements in one's behaviour has to be clearly noticed and honestly acknowledged, without attempts at evasion, at minimizing or self-justification, for instance, by giving them more "respectable names. This is what is implied in the words of the discourse: "//Knowing// (the respective blemish) to be a defilement of the mind . . . " Such knowledge by itself may often discourage the recurrence of the defilements or weaken the strength of their manifestations. According to the Buddhist Teachers of Old (see Note 4, para. 1), this knowledge should be extended to the nature of the defilements, the causes and circumstances of their arising, their cessation, and the means of effecting their cessation. This is an example of how to apply to an actual situation the formula of the Four Noble Truths as embodied in the contemplation of mind-objects (//dhammanupassana//) of the Satipatthana Sutta. Another example is the application of the four truths to higher states of mind, the Divine Abidings, for the purpose of developing insight (Sec. 13 and notes 13, 14).

When the Noble Disciple, on attaining to one of the higher paths, sees himself freed from the defilements, deep joy will arise in him, enthusiasm for the goal and the way, and an unshakable confidence in the Triple Gem. So says our text (Sec. 6-10). But a foretaste of all these fruits and blessings can already be gained by him who has succeeded in noticeably weakening and reducing the defilements. Such enthusiasm and strengthened confidence, being derived from his personal experience, will be of great value to him, adding wings to his further progress. To the extent of his experience, he will have verified for himself the virtues of the Dhamma:

> "Well proclaimed by the Blessed One is the Dhamma, realisable here and now, possessed of immediate result, bidding you come and see, accessible, and

knowable individually by the wise."

For rendering this discourse, use has been made chiefly of the translation by the Venerable Nanamoli Thera (from an unpublished manuscript), and also of the translations by the Venerable Soma Thera and I. B. Horner. Grateful acknowledgement is offered to these able translators. For some key passages, however, the Editor decided to use his own version, partly for the reason of conformity with the commentarial explanations. The Notes have been supplied by the Editor. In these Notes, it was thought desirable to furnish the commentarial references supporting the renderings chosen, and in these cases the inclusion of Pali words was unavoidable. But an effort has been made to make these notes intelligible and helpful to readers who are not familiar with the Pali language as well.

The Simile of the Cloth
(Vatthupama Sutta)

1. Thus have I heard. Once the Blessed One was staying at Savatthi, in Jeta's Grove, Anathapindika's monastery. There he addressed the monks thus: "Monks." -- "Venerable sir," they replied. The Blessed One said this:

2. "Monks, suppose a cloth were stained and dirty, and a dyer dipped it in some dye or other, whether blue or yellow or red or pink, it would take the dye badly and be impure in colour. And why is that? Because the cloth was not clean. So too, monks, when the mind is defiled,[1] an unhappy destination (in a future existence) may be expected.

"Monks, suppose a cloth were clean and bright, and a dyer dipped it in some dye or other, whether blue or yellow or red or pink, it would take the dye well and be pure in colour. And why is that? Because the cloth was clean. So too, monks, when the mind is undefiled, a happy destination (in a future existence) may be expected.

3. "And what, monks, are the defilements of the mind?[2] (1) Covetousness and unrighteous greed are a defilement of the mind; (2) ill will is a defilement of the mind; (3) anger is a defilement of the mind; (4) hostility..... (5) denigration . . . (6) domineering . . . (7) envy..... (8) jealousy . . . (9) hypocrisy . . . (10) fraud..... (11) obstinacy . . . (12) presumption..... (13) conceit . . . (14) arrogance . . . (15) vanity . . . (16) negligence is a defilement of the mind.[3]

4. "Knowing, monks, covetousness and unrighteous greed to be a defilement of the mind, the monk abandons them.[4] Knowing ill will to be a defilement of the mind, he abandons it. Knowing anger to be a defilement of the mind, he abandons it. Knowing hostility to be a defilement of the mind, he abandons it. Knowing denigration to be a defilement of the mind, he abandons it. Knowing domineering to be a defilement of the mind, he abandons it. Knowing envy to be a defilement of the mind, he abandons it. Knowing jealousy to be a defilement of the mind, he abandons it. Knowing hypocrisy to be a defilement of the mind, he abandons it. Knowing fraud to be a defilement of the mind, he abandons it. Knowing obstinacy to be a defilement of the mind, he abandons it. Knowing presumption to be a defilement of the mind, he abandons it. Knowing conceit to be a defilement of the mind, he abandons it. Knowing arrogance to be a defilement of the mind, he abandons it. Knowing vanity to be a defilement of the mind, he abandons it. Knowing negligence to be a defilement of the mind, he abandons it.

5. "When in the monk who thus knows that covetousness and unrighteous greed are a defilement of the mind, this covetousness and unrighteous greed have been abandoned; when in him who thus knows that

ill will is a defilement of the mind, this ill will has been abandoned; . . . when in him who thus knows that negligence is a defilement of the mind, this negligence has been abandoned -- [5]

6. -- he thereupon gains unwavering confidence in the Buddha[6] thus: 'Thus indeed is the Blessed One: he is accomplished, fully enlightened, endowed with (clear) vision and (virtuous) conduct, sublime, knower of the worlds, the incomparable guide of men who are tractable, the teacher of gods and men, enlightened and blessed.'

7. -- he gains unwavering confidence in the Dhamma thus: 'Well proclaimed by the Blessed One is the Dhamma, realisable here and now, possessed of immediate result, bidding you come and see, accessible and knowable individually by the wise.

8. -- he gains unwavering confidence in the Sangha thus: 'The Sangha of the Blessed One's disciples has entered on the good way, has entered on the straight way, has entered on the true way, has entered on the proper way; that is to say, the four pairs of men, the eight types of persons; this Sangha of the Blessed One's disciples is worthy of gifts, worthy of hospitality, worthy of offerings, worthy of reverential salutation, the incomparable field of merit for the world.'

9. "When he has given up, renounced, let go, abandoned and relinquished (the defilements) in part,[7] he knows: 'I am endowed with unwavering confidence in the Buddha . . . in the Dhamma . . . in the Sangha; and he gains enthusiasm for the goal, gains enthusiasm for the Dhamma[8], gains gladness connected with the Dhamma. When he is gladdened, joy is born in him; being joyous in mind, his body becomes tranquil; his body being tranquil, he feels happiness; and the mind of him who is happy becomes concentrated.[9]

10. "He knows: 'I have given up, renounced, let go, abandoned and relinquished (the defilements) in part'; and he gains enthusiasm for the goal, gains enthusiasm for the Dhamma, gains gladness connected with the Dhamma. When he is gladdened, joy is born in him; being joyous in mind, his body becomes tranquil; when his body is tranquil,

he feels happiness; and the mind of him who is happy becomes concentrated.

11. "If, monks, a monk of such virtue, such concentration and such wisdom eats almsfood consisting of choice hill-rice together with various sauces and curries, even that will be no obstacle for him. [11]

"Just as cloth that is stained and dirty becomes clean and bright with the help of pure water, or just as gold becomes clean and bright with the help of a furnace, so too, if a monk of such virtue, such concentration and such wisdom eats almsfood consisting of choice hill-rice together with various sauces and curries, even that will be no obstacle for him.

12. "He abides, having suffused with a mind of loving-kindness [12] one direction of the world, likewise the second, likewise the third, likewise the fourth, and so above, below, around and everywhere, and to all as to himself; he abides suffusing the entire universe with loving-kindness, with a mind grown great, lofty, boundless and free from enmity and ill will.

"He abides, having suffused with a mind of compassion . . . of sympathetic joy . . . of equanimity one direction of the world, likewise the second, likewise the third, likewise the fourth, and so above, below, around and everywhere, and to all as to himself; he abides suffusing the entire universe with equanimity, with a mind grown great, lofty, boundless and free from enmity and ill will.

13. "He understands what exists, what is low, what is excellent,[13] and what escape there is from this (whole) field of perception. [14]

14. "When he knows and sees [15] in this way, his mind becomes liberated from the canker of sensual desire, liberated from the canker of becoming, liberated from the canker of ignorance. [16] When liberated, there is knowledge: 'It is liberated'; and he knows: 'Birth is exhausted, the life of purity has been lived, the task is

done, there is no more of this to come.' Such a monk is called 'one bathed with the inner bathing." [17]

15. Now at that time the brahmin Sundarika Bharadvaja [18] was seated not far from the Blessed One, and he spoke to the Blessed One thus: "But does Master Gotama go to the Bahuka River to bathe?"

"What good, brahmin, is the Bahuka River? What can the Bahuka River do?"

"Truly, Master Gotama, many people believe that the Bahuka River gives purification, many people believe that the Bahuka River gives merit. For in the Bahuka River many people wash away the evil deeds they have done."

16. Then the Blessed One addressed the brahmin Sundarika Bharadvaja in these stanzas: [19]

"Bahuka and Adhikakka,[20]
Gaya and Sundarika, Payaga and Sarassati,
And the stream Bahumati --
A fool may there forever bathe,
Yet will not purify his black deeds.

What can Sundarika bring to pass?
What can the Payaga and the Bahuka?
They cannot purify an evil-doer,
A man performing brutal and cruel acts.

One pure in heart has evermore
The Feast of Cleansing[21] and the Holy Day;[22]
One pure in heart who does good deeds
Has his observances perfect for all times.

It is here, O brahmin, that you should bathe[23]
To make yourself a safe refuge for all beings.
And if you speak no untruth,
Nor work any harm for breathing things,

Nor take what is not offered,
With faith and with no avarice,
To Gaya gone, what would it do for you?
Let any well your Gaya be!"

17. When this was said, the brahmin Sundarika Bharadvaja spoke thus:

"Magnificent, Master Gotama, magnificent, Master Gotama! The Dhamma has been made clear in many ways by Master Gotama, as though he were righting the overthrown, revealing the hidden, showing the way to one who is lost, or holding up a lamp in the dark for those with eyesight to see forms.

18. "I go to Master Gotama for refuge, and to the Dhamma, and to the Sangha. May I receive the (first ordination of) going forth under Master Gotama, may I receive the full admission!

19. And the brahmin Sundarika Bharadvaja received the (first ordination of) going forth under the Blessed One, and he received the full admission. And not long after his full admission, dwelling alone, secluded, diligent, ardent and resolute, the venerable Bharadvaja by his own realisation understood and attained in this very life that supreme goal of the pure life, for which men of good family go forth from home life into homelessness. And he had direct knowledge thus: "Birth is exhausted, the pure life has been lived, the task is done, there is no more of this to come."

And the venerable Bharadvaja became one of the Arahats.

NOTES

1. "//So too, monks, if the mind is defiled . . .//" Comy: "It may be asked why the Buddha had given this simile of the soiled cloth.

He did so to show that effort brings great results. A cloth soiled by dirt that is adventitious (i.e. comes from outside; //agantukehi malehi//), if it is washed can again become clean because of the cloth's natural purity. But in the case of what is naturally black, as for instance (black) goat's fur, any effort (of washing it) will be in vain. Similarly, the mind too is soiled by adventitious defilements (//agantukehi kilesehi//). But originally, at the phases of rebirth(-consciousness) and the (sub-conscious) life-continuum, it is pure throughout (//pakatiya pana sakale pi patisandhi-bhavanga-vare pandaram eva//). As it was said (by the Enlightened One): 'This mind, monks, is luminous, but it becomes soiled by adventitious defilements' (Anguttara Nikaya I). But by cleansing it one can make it more luminous, and effort therein is not in vain."

2. "//Defilements of the mind//" (//cittassa upakkilesa//). Comy.: "When explaining the mental defilements, why did the Blessed One mention greed first? Because it arises first. For with all beings wherever they arise, up to the level of the (Brahma heaven of the) Pure Abodes, it is first greed that arises by way of lust for existence (//bhava-nikanti//). Then the other defilements will appear, being produced according to circumstances. The defilements of mind, however, are not limited to the sixteen mentioned in this discourse. But one should understand that, by indicating here the method, all defilements are included." Sub.Comy. mentions the following additional defilements: fear, cowardice, shamelessness and lack of scruples, insatiability, evil ambitions, etc.

3. The Sixteen Defilements of Mind

   1. //abhijjha-visama-lobha//, covetousness and unrighteous greed

   2. //byapada//, ill will

   3. //kodha//, anger

   4. //upanaha//, hostility or malice

5. //makkha//, denigration or detraction; contempt

6. //palasa//, domineering or presumption

7. //issa//, envy

8. //macchariya//, jealousy, or avarice; selfishness

9. //maya//, hypocrisy or deceit

10. //satheyya//, fraud

11. //thambha//, obstinacy, obduracy

12. //sarambha//, presumption or rivalry; impetuosity

13. //mana//, conceit

14. //atimana//, arrogance, haughtiness

15. //mada//, vanity or pride

16. //pamada//, negligence or heedlessness; in social behaviour, this leads to lack of consideration.

The defilements (3) to (16) appear frequently as a group in the discourses, e.g. in Majjh. 3; while in Majjh. 8 (reproduced in this publication) No. 15 is omitted. A list of seventeen defilements appears regularly in each last discourse of Books 3 to 11 of the Anguttara Nikaya, which carry the title //Ragapeyyala//, the Repetitive Text on Greed (etc.). In these texts of the Anguttara Nikaya, the first two defilements in the above list are called greed (//lobha//) and hate (//dosa//), to which delusion (//moha//) is added; all the fourteen other defilements are identical with the above list.

4. "//Knowing covetousness and unrighteous greed to be a defilement of

the mind, the monk abandons them.//"

//Knowing// (//viditva//). Sub.Comy.: "Having known it either through the incipient wisdom (//pubbabhaga-panna// of the worldling, i.e. before attaining to Stream-entry) or through the wisdom of the two lower paths (Stream-entry and Once-returning). He knows the defilements as to their nature, cause, cessation and means of effecting cessation." This application of the formula of the Four Noble Truths to the defilements deserves close attention.

//Abandons them// (//pajahati//). Comy.: "He abandons the respective defilement through (his attainment of) the noble path where there is 'abandoning by eradication' (//samucchedappahana-vasena ariya-maggena//)," which according to Sub.Comy. is the "final abandoning" (//accantappahana//). Before the attainment of the noble paths, all "abandoning" of defilements is of a temporary nature. See Nyanatiloka Thera, //Buddhist Dictionary//, s. v. //pahana//.

According to the Comy., the sixteen defilements are finally abandoned by the noble paths (or stages of sanctity) in the following order:

"By the //path of Stream-entry// (//sotapatti-magga//) are abandoned: (5) denigration, (6) domineering, (7) envy, (8) jealousy, (9) hypocrisy, (10) fraud.

"//By the path of Non-returning// (//anagami-magga//): (2) ill will, (3) anger, (4) malice, (16) negligence.

"//By the path of Arahatship// (//arahatta-magga//): (1) covetousness and unrighteous greed, (11) obstinacy, (12) presumption, (13) conceit, (14) arrogance, (15) vanity."

If, in the last group of terms, covetousness is taken in a restricted sense as referring only to the craving for the five sense objects, it is finally abandoned by the path of

Non-returning; and this is according to Comy. the meaning intended here. All greed, however, including the hankering after fine material and immaterial existence, is eradicated only on the path of Arahatship; hence the classification under the latter in the list above.

Comy. repeatedly stresses that wherever in our text "abandoning" is mentioned, reference is to the Non-returner (//anagami//); for also in the case of defilements overcome on Stream-entry (see above), the states of mind which produce those defilements are eliminated only by the path of Non-returning.

5. Comy. emphasizes the connection of this paragraph with the following, saying that the statements on each of the sixteen defilements should be connected with the next' paragraphs, e.g. "when in him . . . ill will has been abandoned, he thereupon gains unwavering confidence . . . " Hence the grammatical construction of the original Pali passage -- though rather awkward in English -- has been retained in this translation.

The disciple's direct experience of being freed of this or that defilement becomes for him a living test of his former still imperfectly proven trust in the Buddha, Dhamma and Sangha. Now this trust has become a firm conviction, an unshakable confidence, based on experience.

6. "//Unwavering confidence//" (//aveccappasada//). Comy.: "unshakable and immutable trust." Confidence of that nature is not attained before Stream-entry because only at that stage is the fetter of sceptical doubt (//vicikiccha-samyojana//) finally eliminated. Unwavering confidence in the Buddha, Dhamma and Sangha are three of four characteristic qualities of a Stream-winner (//sotapannassa angani//); the fourth is unbroken morality, which may be taken to be implied in Sec. 9 of our discourse referring to the relinquishment of the defilements.

7. "//When he has given up . . . (the defilements) in part//"

(//yatodhi//): that is, to the extent to which the respective defilements are eliminated by the paths of sanctitude (see Note 4). //Odhi//: limit, limitation. //yatodhi// = //yato odhi//; another reading: //yathodhi// = //yatha-odhi//.

Bhikkhu Nanamoli translates this paragraph thus: "And whatever (from among those imperfections) has, according to the limitation (set by whichever of the first three paths he has attained), been given up, has been (forever) dropped, let go, abandoned, relinquished. "

In the //Vibhanga// of the Abhidhamma Pitaka, we read in the chapter //Jhana-vibhanga//: "He is a bhikkhu because he has abandoned defilements limitedly; or because he has abandoned defilements without limitation" (//odhiso kilesanam pahana bhikkhu; anodhiso kilesanam pahana bhikkhu//).

8. "//Gains enthusiasm for the goal, gains enthusiasm for the Dhamma//" (//labhati atthavedam labhati dhammavedam//).

Comy.: "When reviewing (//paccavekkhato//)* the abandonment of the defilements and his unwavering confidence, strong joy arises in the Non-returner in the thought: 'Such and such defilements are now abandoned by me.' It is like the joy of a king who learns that a rebellion in the frontier region has been quelled."

*["Reviewing" (//paccavekkhana//) is a commentarial term, but is derived, apart from actual meditative experience, from close scrutiny of sutta passages like our present one. "Reviewing" may occur immediately after attainment of the jhanas or the paths and fruitions (e.g. the last sentence of Sec. 14), or as a reviewing of the defilements abandoned (as in Sec. 10) or those remaining. See //Visuddhimagga//, transl. by Nanamoli, p. 789.]

Enthusiasm (//veda//). According to Comy., the word veda occurs in the Pali texts with three connotations: 1. (Vedic) scripture (//gantha//), 2. joy (//somanassa//), 3. knowledge

(//nana//). "Here it signifies joy and the knowledge connected with that joy."

//Attha// (rendered here as "goal") and //dhamma// are a frequently occurring pair of terms obviously intended to supplement each other. Often they mean letter (//dhamma//) and spirit (or meaning: //attha//) of the doctrine; but this hardly fits here. These two terms occur also among the four kinds of analytic knowledge (//patisambhida-nana//; or knowledge of doctrinal discrimination). //Attha-patisambhida// is explained as the discriminative knowledge of "the result of a cause"; while //dhamma-patisambhida// is concerned with the cause or condition.

The Comy. applies now the same interpretation to our present textual passage, saying: "//Attha-veda// is the enthusiasm arisen in him who reviews his unwavering confidence; //dhamma-veda// is the enthusiasm arisen in him who reviews 'the abandonment of the defilement in part,' which is the cause of that unwavering confidence . . . " Hence the two terms refer to "the joy that has as its object the unwavering confidence in the Buddha, and so forth; and the joy inherent in the knowledge (of the abandonment; //somanassa-maya nana//)."

Our rendering of attha (Skt.://artha//) b; "goal" is supported by Comy.: "The unwavering confidence is called //attha// because it has to be reached (//araniyato//), i.e. to be approached (//upagantabbato//)," in the sense of a limited goal, or resultant blessing.

Cf. Ang 5:10: //tasmim dhamme attha-patisamvedi ca hoti dhammapatisamvedi ca; tassa atthapatisamvedino dhammapatisamvedino pamojjam jayati . . .// This text continues, as our present discourse does, with the arising of joy (or rapture; //piti//) from gladness (//pamojja//). //Attha// and //dhamma// refer here to the meaning and text of the Buddha word.

9. The Pali equivalents for this series of terms* are: 1. //pamojja// (gladness), 2. //piti// (joy or rapture), 3. //passaddhi//

(tranquillity), 4. //sukha// (happiness), 5. //samadhi// (concentration). Nos. 2, 3, 5 are factors of enlightenment (//bojjhanga//). The function of tranquillity is here the calming of any slight bodily and mental unrest resulting from rapturous joy, and so transforming the latter into serene happiness followed by meditative absorption. This frequently occurring passage illustrates the importance given in the Buddha's Teaching to happiness as a necessary condition for the attainment of concentration and of spiritual progress in general.

* [Here the noun forms are given, while the original has, in some cases, the verbal forms.]

10. "//Of such virtue, such concentration, such wisdom//" (//evam-silo evam-dhammo evam-panno//). Comy.: "This refers to the (three) parts (of the Noble Eightfold Path), namely, virtue, concentration and wisdom (//sila-//, //samadhi-//, //panna-kkhandha//), associated (here) with the path of Non-returning." Comy. merely refers dhammo to the path-category of concentration (//samadhi-kkhandha//). Sub.Comy. quotes a parallel passage "//evam-dhamma ti Bhagavanto ahesum//," found in the Mahapadana Sutta (Digha 15), the Acchariya-abbhutadhamma Sutta (Majjh. 123), and the Nalanda Sutta of the Satipatthana Samyutta. The Digha Comy. explains //samadhi-pakkha-dhamma// as "mental states belonging to concentration."

11. "//No obstacle//," i.e. for the attainment of the path and fruition (of Arahatship), says Comy. For a Non-returner who has eliminated the fetter of sense-desire, there is no attachment to tasty food.

12. "//With a mind of Loving-kindness//" (//metta-sahagatena cetasa//). This, and the following, refer to the four Divine Abidings (//brahma-vihara//). On these see Wheel Nos. 6 and 7.

13. "//He understands what exists, what is low, what is excellent//" (//so 'atthi idam atthi hinam atthi panitam . . . ' pajanati//).

Comy.: "Having shown the Non-returner's meditation on the Divine Abidings, the Blessed One now shows his practice of insight (//vipassana//), aiming at Arahatship; and he indicates his attainment of it by the words: 'He understands what exists,' etc. This Non-returner, having arisen from the meditation on any of the four Divine Abidings, defines as 'mind' (//nama//) those very states of the Divine Abidings and the mental factors associated with them. He then defines as 'matter' (//rupa//) the heart base (//hadaya-vatthu//) being the physical support (of mind) and the four elements which, on their part, are the support of the heart base. In that way he defines as 'matter' the elements and corporeal phenomena derived from them (//bhutupadayadhamma//). When defining 'mind and matter' in this manner, '//he understands what exists//' (//atthi idan'ti//; lit. 'There is this'). Hereby a definition of the truth of suffering has been given."

"Then, in comprehending the origin of that suffering, he understands '//what is low//.' Thereby the truth of the origin of suffering has been defined. Further, by investigating the means of giving it up, he understands '//what is excellent//. Hereby the truth of the path has been defined."

14."//. . . and what escape there is from this (whole) field of perception//" (//atthi uttari imassa sannaga-tassa nissaranam//). Comy.: "He knows: 'There is Nibbana as an escape beyond that perception of the Divine Abidings attained by me.' Hereby the truth of cessation has been defined."

15. Comy.: "When, by insight-wisdom (//vipassana//), he thus knows the Four Noble Truths in these four ways (i.e. 'what exists,' etc.); and when he thus //sees// them by path-wisdom (//magga-panna//).

16. //Kamasava bhavasava avijjasava//. The mention of liberation from the cankers (//asava//) indicates the monk's attainment of Arahatship which is also called "exhaustion of the cankers" (//asavakkhaya//).

17. "//Bathed with the inner bathing//" (//sinato antarena sinanena//). According to the Comy., the Buddha used this phrase to rouse the attention of the brahmin Sundarika Bharadvaja, who was in the assembly and who believed in purification by ritual bathing. The Buddha foresaw that if he were to speak in praise of "purification by bathing," the brahmin would feel inspired to take ordination under him and finally attain to Arahatship.

18. //Bharadvaja// was the clan name of the brahmin. //Sundarika// was the name of the river to which that brahmin ascribed purifying power. See also the Sundarika-Bharadvaja Sutta in the //Sutta Nipata//.

19. Based on Bhikkhu Nanamoli's version, with a few alterations.

20. Three are fords; the other four are rivers.

21. The text has //Phaggu// which is a day of brahminic purification in the month of Phagguna (February-March). Nanamoli translates it as "Feast of Spring."

22. Uposatha.

23. "//It is here, 0 brahmin, that you should bathe.//" Comy.: i.e. in the Buddha's Dispensation, in the waters of the Noble Eightfold Path.

In the //Psalms of the Sisters// (//Therigatha//), the nun Punnika speaks to a brahmin as follows:

"Nay now, who, ignorant to the ignorant,
Hath told thee this: that water-baptism
From evil kamma can avail to free?
Why then the fishes and the tortoises,
The frogs, the watersnake, the crocodiles
And all that haunt the water straight to heaven
Will go. Yea, all who evil kamma work --

Butchers of sheep and swine, fishers, hunters of
game,
Thieves, murderers -- so they but splash themselves
With water, are from evil kamma free!"

INTRODUCTION

The Sutta-nipata or "Discourse-collection," from which this selection has been compiled, contains some of the oldest and most profound discourses of the Buddha. The complete text has been translated at least three times into English, the most recent being by E.M. Hare under the title "Woven Cadences" (Oxford University Press, London, 1945). The Pali original consists mainly of verse interspersed with some prose passages and Hare has followed this arrangement by

translating it into English blank verse. However, in the selection appearing below the aim has been to keep as near as possible to the original, and no attempt has been made to versify it.

The first discourse shows the distinction between the mode of conduct of the bhikkhu and the layman, both regarded as virtuous or good (sadhu). For, as it is said elsewhere:

> These two ways of life are not the same:
> that of a householder supporting a wife
> and one without worldly attachments ...
>
> As a peacock never approaches the swiftness
> of a swan, so a householder cannot imitate a
> bhikkhu, a hermit meditating in the forest.
>
> -- Snp. vv. 220-221

The lay-follower is given the five precepts of abstaining from killing, stealing and so forth, and then the eight precepts are observed on special occasions (uposatha, "observance days"). Also perhaps it is appropriate to commence with Dhammika's praising the Buddha, for these two, moral discipline and faith in the Buddha, are the basic requisites for making further progress on the Buddhist path.

The next two discourses (2, 3) deal with wrong and right conduct, pointing out the results both courses lead to.

One of the essentials for the practice of the Buddha's teaching is having "good friends" and the avoidance of those who hinder one's progress (4). The best friend is "He from whom one learns the Dhamma" (5) and as such the Buddha is known as the "Good Friend" to all beings.

The next two (6, 7) give the practical training and the direction one should tend towards.

Continuous effort is needed to practice the Dhamma (8) and to inspire one there is no better example than the Buddha's own struggle (9). Then there are two contemplations on the transience of life and the futility of sorrowing over the natural course of events in this world (10, 11).

Two important discourses follow dealing with the misconception that purity can come from outside without putting forth any effort (12) and with wrongly holding to views and opinions leading to contention and suffering (13). These two, together with the rest of what follows, are regarded as some of the oldest discourses of the Sutta-nipata and contain much that is difficult to understand.

In the Parayana-vagga, the last chapter of the Sutta-nipata, sixteen brahmanas -- "famous throughout the world, meditators, delighting in meditation, and wise ..." (v. 1009) -- come to the Buddha and ask Him various questions. Five of them are included here (14, 15, 16, 18, 19).

No. 17 may be compared with the Sakkapanha Suttanta (Digha-nikaya 21, translated as No. 10 in the Wheel Series), which contains a closely parallel series of questions and answers.

No. 20 consists of the concluding verses of a fairly long discourse and indicates the disparity existing between the realization of the "Ariya," the Buddhas and their disciples, and the way of thinking usual to the ordinary people of this world.

A note ought to be included on the term "Dhamma," an important and frequent word in Buddhist literature and which has, in most cases, been left untranslated below for the reason that there is no equivalent word in English to cover all its various shades of meaning. It could be rendered by Law (cosmic and moral), Norm, Teaching, Doctrine, Scripture, Truth, Nature, practice, method, conduct, causality, etc., for these are all meanings of the term 'Dhamma'. But they all tend to fall short of a true definition. The Dhamma is the heart of the Buddha's teaching and without it Buddhism would be something quite dead, and yet it is not the exclusive possession of the historical religion. In addition,

it has another set of meanings and is practically always used in this sense in the plural, as mental (and sensory) objects, ideas, things, phenomena, elements, forces, states. etc. In this latter sense however it has not been left untranslated below.

In conclusion I wish to acknowledge the valuable assistance given by the Ven. Nyanaponika Mahathera in correcting several errors in the translation of this short anthology and in supplying much advice and commentarial literature used in formulating the notes.

John D. Ireland

February 1965.

* * *

1. DHAMMIKA

Thus have I heard. At one time the Lord was staying near Savatthi in the Jeta Grove at Anathapindaka's monastery. Now the lay-follower Dhammika with five hundred other lay-followers approached the Lord. Having drawn near and having saluted the Lord respectfully he sat down at one side. Sitting there the lay-follower Dhammika addressed the Lord as follows:

"I ask Gotama[1] of extensive wisdom this: How acting is a disciple virtuous -- both the disciple who has gone from home to the homeless state and the followers who are householders? For you clearly understand the behavior[2] of the world with the devas and the final release. There is none equal to you who are skilled in seeing what is profound. You are an illustrious Awakened One (Buddha). Having investigated all knowledge and being compassionate towards beings you have announced the Dhamma, a revealer of what is hidden, of comprehensive vision, stainless, you illuminate all the worlds.

"This Dhamma, subtle and pleasing and taught so clearly by you, Lord, it is this we all wish to hear. Having been questioned, foremost Awakened One, tell us (the answer). All these bhikkhus and also the layfollowers who have come to hear the truth, let them listen to the Dhamma awakened to (anubuddham) by the Stainless One as the devas listen to the well-spoken words of Vasava." [3]

(The Lord:) "Listen to me, bhikkhus, I will teach you the ascetic practice (dhamma dhutam), the mode of living suitable for those who have gone forth. Do you all bear it in mind. One who is intent upon what is good and who is thoughtful should practice it.

"A bhikkhu should not wander about at the wrong time but should walk the village for food at the right time, as one who goes about at the wrong time is (liable to be) obsessed by attachment, therefore Awakened Ones do not walk (for alms) at the wrong time.[4] Sights, sounds, tastes, scents and bodily contacts overwhelm (the minds of) beings. Being rid of desire for these sense objects, at the right time, one may enter (the village) for the morning meal. Having duly obtained food, going back alone and sitting down in a secluded place, being inwardly thoughtful and not letting the mind go out to external objects, a bhikkhu should develop self-control.

"If he should speak with a lay-disciple, with someone else or with another bhikkhu, he should speak on the subtle Dhamma, not slandering others nor gossiping. Some set themselves up as disputants in opposition to others; those of little wisdom we do not praise; attachments bind them and they are carried away by their emotions.[5]

"Having heard the Dhamma taught by the Sugata[6] and considered it, a disciple of Him of excellent wisdom should wisely make use of food, a dwelling, a bed, a seat and water for washing the robe. But a bhikkhu should not be soiled by (clinging to) these things, as a lotus is not wetted by a drop of water.

"Now I will tell you the layman's duty. Following it a lay-disciple would be virtuous; for it is not possible for one occupied with the household life to realize the complete bhikkhu

practice (dhamma).

"He should not kill a living being, nor cause it to be killed, nor should he incite another to kill. Do not injure any being, either strong or weak, in the world.

"A disciple should avoid taking anything from anywhere knowing it (to belong to another). He should not steal nor incite another to steal. He should completely avoid theft.

"A wise man should avoid unchastity as (he would avoid falling into) a pit of glowing charcoal. If unable to lead a celibate life, he should not go to another's wife.

"Having entered a royal court or a company of people he should not speak lies. He should not speak lies (himself) nor incite others to do so. He should completely avoid falsehood.

"A layman who has chosen to practice this Dhamma should not indulge in the drinking of intoxicants. He should not drink them nor encourage others to do so; realizing that it leads to madness. Through intoxication foolish people perform evil deeds and cause other heedless people to do likewise. He should avoid intoxication, this occasion for demerit, which stupefies the mind, and is the pleasure of foolish people.

"Do not kill a living being;
do not take what is not given;
do not speak a lie;
do not drink intoxicants;
abstain from sexual intercourse;
do not eat food at night, at the wrong time;
do not wear flower-garlands nor use perfumes;
use the ground as a bed or sleep on a mat.

"This is called the eight-factored observance made known by the known by the Awakened One who has reached the end of suffering.

With a gladdened mind observe the observance day (uposatha), complete with its eight factors, on the fourteenth, fifteenth and eighth days of the (lunar) fortnight and also the special holiday of the half month. In the morning, with a pure heart and a joyful mind, a wise man, after observing the uposatha, should distribute suitable food and drink to the community of bhikkhus. He should support his mother and father as his duty and engage in lawful trading. A layman who carries this out diligently goes to the devas called "Self-radiant."[7]

-- vv. 376-378, 383-404

Notes:

[1] Gotama is the Buddha's clan or family name.

[2] According to the commentary, the Pali term "gati" translated here as "behavior" means either "trend of character" or "the destination of beings after death.

[3] "Vasava" is one of the several names for Sakka, ruler of the devas or gods. This is a poetical way of saying they should listen very attentively.

[4] The right time for going into the village to collect alms-food is in the forenoon. If a bhikkhu went about indiscriminately, "at the wrong time," he might see things or have experiences that would endanger his life of purity and cause him to revert to the lay life.

[5] Literally, "they send the mind far."

[6] Sugata, literally "well-gone," sometimes translated as the "Happy One," is an epithet of the Buddha.

[7] A class of heavenly beings (deva). A layman who practices this will, after death, be reborn as one of them.

* * *

2. WRONG CONDUCT

"The practice of Dhamma,[1] the practice of continence,[2] mastery of this is said to be best if a person has gone forth from home to the homeless life. But if he is garrulous and, like a brute, delights in hurting others, his life is evil and his impurity increases.

"A quarrelsome bhikkhu shrouded by delusion, does not comprehend the Dhamma taught by the Awakened One when it is revealed. Annoying those practiced in meditation, being led by ignorance, he is not aware that his defiled path leads to Niraya-hell. Falling headlong, passing from womb to womb, from darkness to (greater) darkness, such a bhikkhu undergoes suffering hereafter for certain.

"As a cesspool filled over a number of years is difficult to clean, similarly, whoever is full of impurity is difficult to make pure. Whoever you know to be such, bhikkhus, bent on worldliness, having wrong desires, wrong thoughts, wrong behavior and resort, being completely united avoid him, sweep him out like dirt, remove him like rubbish. Winnow like chaff the non-recluses. Having ejected those of wrong desires, of wrong behavior and resort, be pure and mindful, dwelling with those who are pure. Being united and prudent you will make an end to suffering."

-- vv. 274-283

Notes:

[1] Dhammacariya.

[2] Brahmacariya, the divine-life, the practice of purity or chastity. Dhammacariya and Brahmacariya are two closely

related terms. "Dhamma" being used here in the sense of virtue or good conduct.

* * *

3. RIGHT CONDUCT

"By developing what habit, what conduct, what actions may man be correctly established in and arrive at the highest goal?

"He should respect his elders and not be envious of them. He should know the right time for seeing his teacher.[1] If a talk on Dhamma has started he should know the value of the opportunity and should listen carefully to the well-spoken words.[2]

"When the time is right let him go to his teacher's presence, unassuming, putting aside stubbornness. Let him keep in mind and practice (what he has learned): the meaning and the text (of the Teaching), self-control and (the other virtues of) the Holy Life.[3] Delighting in the Dhamma, devoted to the Dhamma, established in the Dhamma, skilled in investigating the Dhamma,[4] let him not indulge in talk harmful to the (practice of) Dhamma. Let him be guided by well-spoken truths.

"Abandoning the uttering of laughter and lamentations; giving up anger, fraud, hypocrisy, longing, conceit, violence, harshness, moral taints and infatuation; let him live without pride, self controlled. Understanding is essential (for listening) to a well-spoken word. Learning and understanding are essential to meditation, but a man who is hasty and heedless does not increase his wisdom and learning.

"Those who are devoted to the Dhamma made known by the Noble Ones

(ariya) are unsurpassed in speech, thought and action. They are established in peace, gentleness and concentration, and have reached the essence of learning and wisdom."

-- vv. 324-330)

Notes:

[1] That is when needing their advice for dispelling mental defilements.

[2] The phrase "well-spoken" (//subhasita//) is a technical term in the Pali Canon. It refers to saying connected with Dhamma and concerning one's well-being, happiness and progress on the path.

[3] The rendering follows the Commentary.

[4] Or, "having discriminative knowledge of the Dhamma."

* * *

4. ON FRIENDSHIP

"One who, overstepping and despising a sense of shame, says, 'I am your friend,' but does not take upon himself any tasks he is capable of doing, is to be recognized as no friend. One who speaks amiably to his companions, but whose actions do not conform to it, him the wise know for certain as a talker not a doer. He is no friend who, anticipating conflict, is always alert in looking out for weaknesses.[1] But he on whom one can rely, like a child sleeping on its mother's breast, is truly a friend who cannot be parted from one

by others.

"One who bears the human burden of responsibility, with it fruits and blessings in mind, he cultivates a cause[2] of joy and happiness worthy of praise. Having tasted the flavor of solitude and peace one is free from fear and wrong-doings imbibing the rapture of Dhamma."

-- vv. 253-257

Notes:

[1] Such a person dislikes to be reproved, and when an occasion for this occurs he would wish to have a weapon with which to retaliate, and therefore, he takes note of one's weaknesses.

[2] According to the Commentary, this joy-producing cause is strenuous effort (viriya).

* * *

5. THE SIMILE OF THE BOAT

"He from whom a person learns the Dhamma should be venerated, as the devas venerate Inda, their Lord.[1] He, (a teacher) of great learning, thus venerated, will explain the Dhamma, being well-disposed towards one. Having paid attention and considered it, a wise man, practicing according to Dhamma, becomes learned, intelligent and accomplished by associating himself diligently with such a teacher.

"But by following an inferior and foolish teacher who has not gained (fine) understanding of the Dhamma and is envious of others,

one will approach death without comprehending the Dhamma and unrelieved of doubt.

"If a man going down into a river, swollen and swiftly flowing, is carried away by the current -- how can he help others across?

"Even so, he who has not comprehended the Dhamma, has not paid attention to the meaning as expounded by the learned, being himself without knowledge and unrelieved of doubt -- how can he make others understand?

"But if (the man at the river) knows the method and is skilled and wise, by boarding a strong boat equipped with oars and a rudder, he can, with its help, set others across. Even so, he who is experienced and has a well-trained mind, who is learned and dependable,[2] clearly knowing, he can help others to understand who are willing to listen and ready to receive.[3]

"Surely, therefore, one should associate with a good man who is wise and learned. By understanding the meaning of what one has learnt and practicing accordingly one who has Dhamma-experience[4] attains (supreme) happiness."[5]

-- vv. 316-323

Notes:

[1] "Inda" (Sanskrit "Indra") is another name for Sakka, the ruler of the gods.

[2] He has a character which remains unperturbed by the vicissitudes of life (Comy).

[3] Possessing the supporting conditions for attaining the Paths and Fruits of Stream-winning, Once-returning, Never-returning and Final Sainthood (Arahatta).

[4] One who has fully understood or experienced the Dhamma by

penetrating to its essence through the practice taught by a wise teacher (Comy).

[5] The transcendental happiness of the Paths and Fruits and of Nibbana.

* * *

6. ADVICE TO RAHULA

"Renouncing the five pleasures of sense that entrance and delight the mind, and in faith departing from home, become one who makes an end of suffering!

"Associate with good friends and choose a remote lodging, secluded, with little noise. Be moderate in eating. Robes, alms-food, remedies and a dwelling, - do not have craving for these things; do not be one who returns to the world. [1] Practice restraint according to the Discipline,[2] and control the five sense-faculties.

"Practice mindfulness of the body and continually develop dispassion (towards it). Avoid the sign of the beautiful connected with passion; by meditating on the foul[3] cultivate a mind that is concentrated and collected.

"Meditate on the Signless[4] and get rid of the tendency to conceit. By thoroughly understanding and destroying conceit[5] you will live in the (highest) peace."

In this manner the Lord repeatedly exhorted the Venerable Rahula.

-- vv. 337-342

Notes:

[1] By being dragged back to it again by your craving for these things (Comy).

[2] The Vinaya, or disciplinary code of the community of Bhikkhus.

[3] The "foul", or //asubha-kammatthana//, refers to the practice of contemplating a corpse in various stages of decay and the contemplation on the thirty-two parts of the body, as a means of developing detachment from body and dispassion in regard to its beautiful (or, "the sign of the beautiful", subha-nimitta).

[4] The Signless (//animitta//) is one of the three Deliverances (//vimokkha//) by which beings are liberated from the world. The other two are Desirelessness (//appanihita//) and Emptiness (//sunnata//). The Signless is connected with the idea of impermanence of all conditioned things (cf. Visuddhi Magga, XXI 67f).

[5] The word "//mana//" means both conceit and misconceiving.

* * *

7. THE TRAINING

"Violence breeds misery;[1] look at people quarreling. I will relate the emotion agitating me.

"Having seen people struggling and contending with each other like fish in a small amount of water, fear entered me. The world is everywhere insecure, every direction is in turmoil; desiring an abode for myself I did not find one uninhabited.[2] When I saw contention as the sole outcome, aversion increased in me; but then I saw an arrow[3] here, difficult to see, set in the heart. Pierced by it, once runs in every direction, but having pulled it out one does not run nor does one sink.[4]

"Here follows the (rule of) training:

"Whatever are worldly fetters, may you not be bound by them! Completely break down sensual desires and practice so as to realize Nibbana for yourself!

"A sage should be truthful, not arrogant, not deceitful, not given to slandering others, and should be without anger. He should remove the evil of attachment and wrongly directed longing; he should conquer drowsiness, lassitude and sloth, and not dwell in indolence. A man whose mind is set on Nibbana should not be arrogant. He should not lapse into untruth nor generate love for sense objects. He should thoroughly understand (the nature of) conceit and abstain from violence. He should not delight in what is past, nor be fond of what is new, nor sorrow for what is disappearing, nor crave for the attractive.

"Greed, I say, is a great flood; it is a whirlpool sucking one down, a constant yearning, seeking a hold, continually in movement;[5] difficult to cross is the morass of sensual desire. A sage does not deviate from truth, a brahmana[6] stands on firm ground; renouncing all, he is truly called 'calmed'.

"Having actually experienced and understood the Dhamma he has realized the highest knowledge and is independent.[7] He comports himself correctly in the world and does not envy anyone here. He who

has left behind sensual pleasures, an attachment difficult to leave behind, does not grieve nor have any longing; has has cut across the stream and is unfettered.

"Dry out that which is past,[8] let there be nothing for you in the future.[9] If you do not grasp at anything in the present you will go about at peace. One who, in regard to this entire mindbody complex, has no cherishing of it as 'mine,' and who does not grieve fro what is non-existent truly suffers no loss in the world. For him there is no thought of anything as 'this is mine' or 'this is another's'; not finding any state of ownership, and realizing, 'nothing is mine,' he does not grieve.

"To be not callous, not greedy, at rest and unruffled by circumstances -- that is the profitable result I proclaim when asked about one who does not waver. For one who does not crave, who has understanding, there is no production (of new kamma).[10] Refraining from initiating (new kamma) he sees security everywhere. A sage does not speak in terms of being equal, lower or higher. Calmed and without selfishness he neither grasps nor rejects."

-- vv. 935-954

Notes:

[1] //Attadanda bhayam jatam//: "Violence" (//attadanda//, lit.: "seizing a stick" or "weapons") includes in it all wrong conduct in deeds, words and thoughts.

//Bhaya// is either a subjective state of mind, "fear," or the objective condition of "fearfulness," danger, misery; and so it is explained in the Comy. as the evil consequences of wrong conduct, in this life and in future existence.

[2] Uninhabited by decay and death, etc. (Comy).

[3] The arrow of lust, hate, delusion and (wrong) views.

[4] That is, sink into the four "floods" of sensual desire, continual becoming, wrong views and ignorance. These are the two contrasting dangers of Samsara, i.e., restless //running//, ever seeking after sensual delights, and //sinking//, or passively clinging to the defilements, whereby one is overwhelmed by the "flood." In the first discourse of the Samyutta-nikaya the Buddha says: "If I stood still, I sank; if I struggled, I was carried away. Thus by neither standing still nor struggling, I crossed the flood."

[5] According to the commentary these four phrases, beginning with a "whirlpool sucking down," are all synonyms for craving (//tanha//) or greed (//gedha//) called the "great flood".

[6] In Buddhism the title "Brahmana" is sometimes used for one who has reached final deliverance. The Buddha himself is sometimes called "the Brahmana".

[7] Independent of craving and views.

[8] "Dry out" (//visodehi//) your former, and not your matured kamma, i.e., make it unproductive, by not giving room to passions that may grow out of the past actions.

[9] Do not rouse in kamma-productive passions concerning the future.

[10] Volitional acts, good or bad, manifesting in deeds of body, speech and mind leading to a future result.

* * *

8. ON VIGILANCE

"Rouse yourself! Sit up! What good is there in sleeping? For those afflicted by disease (suffering), struck by the arrow (craving), what sleep is there?

"Rouse yourself! Sit up! Resolutely train yourself to attain peace.[1] Do not let the king of death,[2] seeing you are careless, lead you astray and dominate you.

"Go beyond this clinging,[3] to which devas and men are attached, and (the pleasures) they seek. Do not waste your opportunity. When the opportunity has passed they sorrow when consigned to Niraya-hell.

"Negligence is a taint, and so is the (greater) negligence growing from it. By earnestness and understanding withdraw the arrow (of sensual passions)."

-- vv. 331-334

Notes:

[1] "Peace" is a synonym for Nibbana, the final goal.

[2] The king of death (maccuraja), or Mara (death), is the personification of everything that binds us to this world and prevents the gaining of deliverance.

[3] This clinging to pleasures of the senses.

* * *

9. THE GREAT STRUGGLE

"When, near the river Neranjara, I exerted myself in meditation for attaining to security from bondage,[1] there came Namuci[2] speaking words of compassion:

"'You are emaciated and ill-looking, you are near to death! A thousand parts of you belong to death and only a fraction of you is alive. Live, good Sir! It is better to live. Living you may perform meritorious deeds. From practicing celibacy and tending the sacrificial fire much merit is made, but what is obtained from striving? It is difficult to enter the path of exertion, it is difficult to do, difficult to maintain.'"

Mara spoke these words whilst standing in the presence of the Awakened One. To Mara speaking thus, the Lord replied:

"You who are the friend of the negligent, O Evil One, for what reason have you come here? Those who still have use for merit Mara may consider worthwhile addressing. I have faith and energy and wisdom. Being thus bent on striving why do you ask me to live? This wind will wither the currents of the rivers, why should not my exertion dry up even the blood? When the blood dries up, the bile and phlegm wither. On the wasting away of the flesh the mind becomes more and more serene and my mindfulness, wisdom and concentration are established more firmly. In me, who abides enduring such an extreme experience, the mind does not long for sensual pleasures. See the purity of a being!

"Sensual desire is your first army, the second is called discontent, the third is hunger and thirst, the fourth craving, the fifth sluggishness and laziness, the sixth fear, the seventh indecision, and the eighth disparagement of others and stubbornness:

gain, fame, honor, prestige wrongly acquired and whoever praises himself and despises others -- these, Namuci, are your armies, the Dark One's[3] striking forces. A lazy, cowardly person cannot overcome them, but by conquering them one gains bliss.

"I wear munja-grass![4] Shame on life here in this world! It is better for me to die in battle than to live defeated. Some recluses and brahmanas are not seen (exerting themselves) here, so immersed are they (in worldliness). They are not aware of that path by which those of perfect conduct walk.

"Seeing the surrounding army ready and Mara mounted (on his elephant), I am going out to fight so that he may not shift me from my position. This army of yours which the world together with the devas is unable to subdue, that I will destroy with wisdom, like an unbaked clay-bowl with a stone. Having mastered the mind and firmly established mindfulness I shall wander from country to country guiding many disciples. And they will be diligent and energetic in practicing my teaching, the teaching of one without sensual desire, and they will go where, having gone, one does not grieve."

Mara: "For seven years I followed the Lord step by step but did not find an opportunity to defeat that mindful Awakened One. A crow flew around a stone having the colour of fat: 'Can we find even here something tender? May it be something to eat?'

"Not finding anything edible the crow left that place. As with the crow and the stone, we leave Gotama, having approached and become disheartened."

Overcome by sorrow his lute fell from his arm and thereupon the unhappy spirit disappeared from that place.

-- vv. 425-449

Notes:

[1] //Yogakkhema//, a name for Nibbana.

[2] Namuci, meaning "He who does not let go" (his hold over beings easily) is a name for Mara, the Evil One.

[3] The "Dark One" or Kanha (Sanskrit: Krishna), is another name for Mara. He is the Indian Cupid (Kamadeva) and personifies sensual passions. He carries a lute (//vina//), mentioned at the close, with which he captivates beings by his playing. His other equipment includes a bow, arrows, a noose and a hook.

[4] Indian warriors used to wear a tuft of a certain grass, called //munja//, on their head or headgear, for indicating that they were prepared to die in battle and determined not to retreat.

* * *

10. ON DECAY

"Short indeed is this life, this side of an hundred years one dies; whoever lives long even he dies from old age. People grieve for things they are attached to, yet there exist no permanent possessions but just a state of (constant) separation. Seeing this one should no longer live the household life. That which a man imagines to be his will disappear at death. Knowing this a wise man will have no attachment (to anything).

"As a man awakened from sleep no longer sees what happened in his dream, similarly one does not see a loved one who is dead. Those

people who were seen and heard and called by their names as such and such, only their names remain when they have passed away. Those greedy for objects of attachment do not abandon sorrow, grief and avarice, but sages having got rid of possessions, live perceiving security. For a bhikkhu with a detached mind, living in a secluded dwelling, it is right, they say, that he no longer shows himself in the abodes (of existence).[1]

"A sage who is completely independent does not make close friends or enemies. In him sorrow and selfishness do not stay, like water on a lotus leaf. As a lotus is not wetted by water, so a sage is not affected by what is seen or heard, nor by what is perceived by the other senses. A wise man is not deluded by what is perceived by the senses. He does not expect purity by any other way.[2] He is neither pleased nor is he repelled (by the six sense-objects)."

-- vv. 804-813

Notes:

[1] There is a play on words here: "bhavana," besides meaning "an abode of existence" also means "a house". So as well as saying, he is not reborn into any realm of existence, the passage also indicates, he lives secluded and does not associate with people in the village.

[2] By any way other than the Noble Eightfold Path (Comy).

* * *

11. THE ARROW

"Unindicated and unknown is the length of life of those subject to death. Life is difficult and brief and bound up with suffering. There is no means by which those who are born will not die. Having reached old age, there is death. This is the natural course for a living being. With ripe fruits there is the constant danger that they will fall. In the same way, for those born and subject to death, there is always the fear of dying. Just as the pots made by a potter all end by being broken, so death is (the breaking up) of life.

"The young and old, the foolish and the wise, all are stopped short by the power of death, all finally end in death. Of those overcome by death and passing to another world, a father cannot hold back his son, nor relatives a relation. See! While the relatives are looking on and weeping, one by one each mortal is led away like an ox to slaughter.

"In this manner the world is afflicted by death and decay. But the wise do not grieve, having realized the nature of the world. You do not know the path by which they came or departed. Not seeing either end you lament in vain. If any benefit is gained by lamenting, the wise would do it. Only a fool would harm himself. Yet through weeping and sorrowing the mind does not become calm, but still more suffering is produced, the body is harmed and one becomes lean and pale, one merely hurts oneself. One cannot protect a departed one (//peta//) by that means. To grieve is in vain.

"By not abandoning sorrow a being simply undergoes more suffering. Bewailing the dead he comes under the sway of sorrow. See other men faring according to their deeds! Hence beings tremble here with fear when they come into the power of death. Whatever they imagine, it (turns out) quite different from that. This is the sort of disappointment that exists. Look at the nature of the world! If a man lives for an hundred years, or even more, finally, he is separated from his circle of relatives and gives up his life in the end. Therefore, having listened to the Arahant,[1] one should give up lamenting. Seeing a dead body, one should know, "He will not be met

by me again." As the fire in a burning house is extinguished with water, so a wise, discriminating, learned and sensible man should quickly drive away the sorrow that arises, as the wind (blows off) a piece of cotton. He who seeks happiness should withdraw the arrow: his own lamentations, longings and grief.

"With the arrow withdrawn, unattached, he would attain to peace of mind; and when all sorrow has been transcended he is sorrow-free and has realized Nibbana.

-- vv. 574-593

Note:

[1] The Perfect One, i.e., the Buddha.

* * *

12. ON PURITY

'"Here I see one who is pure, entirely free of sickness. By seeing him a man may attain to purity!'

"Convinced of that and thinking it 'the highest,' he believes it to be knowledge when he contemplates 'the pure one.'[1] But if by sights man can gain purification or if through such knowledge he could leave suffering behind, then, one who still has attachments could be purified by another.[2] However, this is merely the opinion of those who so assert.

"The (true) brahmana[3] has said one is not purified by another, nor by what is seen, heard or perceived (by the other senses), nor, by

the performance of ritual observances. He (the true brahmana) is not defiled by merit or demerit. Having given up what he had (previously) grasped at, he no longer engages in producing (any kamma). Having left a former (object) they attach themselves to another, dominated by craving they do not go beyond attachment. They reject and seize, like a monkey letting go of a branch to take hold of another.

"A person having undertaken a ritual act goes this way and that, fettered by his senses. But one with a wide wisdom, having understood and gone into the Dhamma with his experience, does not go this way and that. For a person indifferent towards all conditions, whatever is seen, heard or cognized, he is one who sees it as it really is and lives with clarity (of mind). With what could he be identified in the world?

"They do not speculate nor pursue (any notion), they do not claim perfect purity. Loosening the knot (of clinging) with which they are bound, they do not have longing anywhere in the world. The (true) brahmana who has gone beyond limitations, having understood and seen there is no longer any assumption for him, he is neither disturbed by lust nor agitated by revulsion. For him there is nothing upheld as 'the highest'."

-- vv. 788-795

Notes:

[1] This refers to the old Indian belief in "auspicious sights" (//dittha-mangala//), the belief that by merely beholding something or someone regarded as a holy object or person, purity, or whatever else is desired, may be gained.

[2] By another method, other than that of the Noble Eightfold Path (Comy.); but it could also mean, "by the sight of another person".

[3] I.e., the Buddha.

* * *

13. ON VIEWS

"A person who associates himself with certain views, considering them as best and making them supreme in the world, he says, because of that, that all other views are inferior; therefore he is not free from contention (with others). In what is seen, heard, cognized and in ritual observances performed, he sees a profit for himself. Just by laying hold of that view he regards every other view as worthless. Those skilled (in judgement)[1] say that (a view becomes) a bond if, relying on it, one regards everything else as inferior. Therefore a bhikkhu should not depend on what is seen, heard or cognized, nor upon ritual observances. He should not present himself as equal to, nor imagine himself to be inferior, nor better than, another. Abandoning (the views) he had (previously) held and not taking up (another), he does not seek a support even in knowledge. Among those who dispute he is certainly not one to take sides. He does not [have] recourse to a view at all. In whom there is no inclination to either extreme, for becoming or non-becoming, here or in another existence, for him there does not exist a fixed viewpoint on investigating the doctrines assumed (by others). Concerning the seen, the heard and the cognized he does not form the least notion. That brahmana[2] who does not grasp at a view, with what could he be identified in the world?

"They do not speculate nor pursue (any notion); doctrines are not accepted by them. A (true) brahmana[2] is beyond, does not fall back on views."

-- vv. 796-803

Notes:

[1] I.e., the Buddhas and their disciples who have realized the goal.

[2] I.e., a perfected one.

* * *

14. AJITA'S QUESTIONS

//The Venerable Ajita//: "By what is the world enveloped? Because of what is it not known? With what do you say it is soiled? What is its great fear?"

//The Lord//: "The world is enveloped by ignorance, Ajita. Because of wrongly directed desire and heedlessness it is not known (as it really is). It is soiled by longings and its great fear is suffering."

//Ajita//: "Everywhere flow the streams.[1] What is the obstruction for the streams, tell me the restricting of them, by what are they cut off?"

//The Lord//: "Whatever streams are in the world, it is mindfulness that obstructs them and restricts them, and by wisdom they are cut off."

//Ajita//: "It is just wisdom and mindfulness. Now mind-and-body, sir, explain this: where does it cease?"

//The Lord//: "This question you have asked, Ajita, I will answer for you: where mind-and-body completely cease. By the cessation of

consciousness they cease."[2]

//Ajita//: "Those who have fully understood the Dhamma, those who are training and the other individuals here,[3] explain their (rule of) conduct."

//The Lord//: "Not craving for sensual pleasures and with a mind that is pure and tranquil[4] a bhikkhu should mindfully go forth, skillful in all situations."

-- vv. 1032-1039

Notes:

[1] "The streams" are cravings flowing out towards pleasurable and desirable objects in the world.

[2] This question and answer refers to the doctrine of dependent-arising (//paticca-samuppada//). Where rebirth-consciousness (//pati-sandhi-vinnana//) does not arise there is no establishment of an individual (mind-and-body, //namarupa//) in a realm of existence, nor the consequent appearance of old age and death and the other sufferings inherent in life.

[3] "Those who have fully understood" are Arahants (perfected ones) who have reached the highest goal. "Those who are training" are those noble beings (//ariya//) who are working towards and are assured of that goal. The other individuals are ordinary beings (//puthujjana//) who have not yet reached assurance.

[4] The word //anavilo// means pure, clear, tranquil, unagitated, unmuddied, etc. In the Dhammapada v. 82, the wise are compared to a deep lake with this quality.

* * *

15. PUNNAKA'S QUESTIONS

//The Venerable Punnaka//: "To him who is free from craving, who has seen the root (of things)[1] I have come with a question: for what reason did sages, warriors, brahmanas and other men prepare, here in this world, various sacrificial gifts for the gods (devata)? I ask the Lord this, let him tell me the answer."

//The Lord//: "Whatever sages, warriors, brahmanas and other men, Punnaka, prepared various sacrificial gifts for the gods, they did so in the hope of this or that (future) existence, being induced by (the fact of) old age and decay."

//Punnaka//: "By preparing various sacrificial gifts for the gods, being zealous in sacrificing, do they cross beyond birth and decay, Lord?"

//The Lord//: "They hope and extol, pray and sacrifice for things of the senses, Punnaka. For the sake of such reward they pray. These devotees of sacrifice, infatuated by their passion for existence,[2] do not cross beyond birth and decay, I say."

//Punnaka//: "If these devotees of sacrifice do not cross beyond birth and decay through sacrifice, Sir, then by what practice does one cross beyond birth and decay in this world of gods and men?"

//The Lord//: "He who has comprehended in the world the here and the beyond, in whom there is no perturbation by anything in the world, who is calm, free from the smoldering fires,[3] untroubled and desireless, -- he has crossed beyond birth and decay, I say."

-- vv. 1043-1048

Notes:

[1] "The root of unwholesome actions, etc." (Comy). There are six roots or basic conditions in a person leading to the performance of unwholesome (unskilled) and wholesome (skilled) actions: greed, aversion, delusion, non-greed (renunciation, detachment), non-aversion (love) and non-delusion(wisdom). The Buddha has seen and understood this as it really is.

[2] Or, "burning with lust for life".

[3] The three "fires" of greed, aversion and delusion. This is a punning reference, also to be seen in the previous note, to the brahmana's sacrificial fire.

* * *

16. METTAGU'S QUESTIONS

//The Venerable Mettagu//: "I ask the Lord this question, may he tell me the answer to it. I know him to be a master of knowledge and a perfected being. From whence have arisen these many sufferings evident in the world?"

//The Lord//: "You have asked me the source of suffering. Mettagu, I will tell it to you as it has been discerned by me. These many sufferings evident in the world have arisen from worldly attachments.

Whoever ignorantly creates an attachment, that stupid person comes upon suffering again and again. Therefore a man of understanding should not create attachment, seeing it is the source of suffering."

//Mettagu//: "What I did ask you have explained, now I ask another question. Come tell me this: how do the wise cross the flood, birth and old age, sorrow and grief? Explain it thoroughly to me, O sage, for this Dhamma has been understood[1] by you."

//The Lord//: "I will set forth the Dhamma, Mettagu, a teaching to be directly perceived,[2] not something based on hearsay, by experiencing which and living mindfully one may pass beyond the entanglements of the world."

//Mettagu//: "I rejoice in the thought of that highest Dhamma, great sage, by experiencing which and living mindfully one may pass beyond the entanglements of the world."

//The Lord//: "Whatever you clearly comprehend, Mettagu, above, below, across and in between, get rid of delight in it. Rid yourself of habitual attitudes[3] and (life affirming) consciousness.[4] Do not continue in existence. Living thus, mindful and vigilant, a bhikkhu who has forsaken selfish attachments may, by understanding, abandon suffering, birth and old age, sorrow and grief, even here in this life."

//Mettagu//: "I rejoice in the words of the great sage. Well explained, O Gotama, is the state of non-attachment.[5] The Lord has surely abandoned suffering as this Dhamma has been realized by him. They will certainly abandon suffering who are constantly admonished by you, O Sage. Having understood, I venerate it, Noble One. May the Lord constantly admonish me also."

//The Lord//: "Whom you know as a true brahmana, a master of knowledge, owning nothing, not attached to sensual (-realm) existence, he has certainly crossed this flood. Having crossed beyond he is untainted and freed from doubt. One who has discarded this clinging (leading) to renewal of existence is a man who has realized the

highest knowledge. Free from craving, undistressed, desireless, he has crossed beyond birth and old age, I say."

-- vv. 1049-1060

Notes:

[1] The Pali word "vidito" also means, found out, discovered.

[2] Ditthe dhamme: to be seen for oneself in this life or here and now. It is an expression used of Nibbana.

[3] Or, "fixed views".

[4] Or, "kamma-producing consciousness".

[5] I.e., Nibbana.

* * *

17. FURTHER QUESTIONS

"From what arise contentions and disputes, lamentations and sorrows, along with selfishness and conceit, and arrogance along with slander? From where do these various things arise? Come tell me this."

"From being too endeared (to objects and persons) arise contentions and disputes, lamentations and sorrows along with avarice, selfishness and conceit, arrogance and slander. Contentions and disputes are

linked with selfishness, and slander is born of contention."

"What are the sources of becoming endeared in the world? What are the sources of whatever passions prevail in the world, of longings and fulfillments that are man's goal (in life)?"

"Desires are the source of becoming endeared (to objects and persons) in the world, also of whatever passions prevail. These are the sources of longings and fulfillments that are man's goal (in life)."[1]

"Now what is the source of desire in the world? What is the cause of judgements[2] that arise; of anger, untruth, doubts and whatever other (similar) states that have been spoken of by the Recluse (i.e., the Buddha)?"

"It is pleasant, it is unpleasant," so people speak in the world; and based upon that arises desire. Having seen the appearing and disappearing of material things a man makes his judgements in the world.[3] Anger, untruth and doubts, these states arise merely because of the existence of this duality.[4] Let a doubter train himself by way of insight to understand these states as taught by the Recluse."

"What is the source of thinking things as pleasant or unpleasant? When what is absent are these states not present? What is the meaning of appearing and disappearing? Explain the source of it to me."

"The pleasant and the unpleasant have their source in sense-impression. When this sense-impression is absent, these states are not present. The idea of appearing and disappearing is produced from this, I say."

"What is the source of sense-impression? From what arises so much grasping? By the absence of what is there no selfish attachment? By

the disappearance of what is sense-impression not experienced?" --

"Sense-impression is dependent upon the mental and the material. Grasping has its source in wanting (something). What not being present there is no selfish attachment. By the disappearance of material objects sense-impression is not experienced."

"For whom does materiality disappear? How do pleasure and discomfort cease to be? Tell me how it ceases so that I may be satisfied in my mind that I have understood it."

"His perception is not the ordinary kind, nor is his perception abnormal;[5] he is not without perception nor is his perception (of materiality) suspended.[6] -- to such an one immateriality ceases.[7] Perception is indeed the source of the world of multiplicity." --

"What we asked, you have explained. We now ask another question. Tell us the answer to it. Do not some of the learned declare purification of the spirit[8] as the highest state to be attained? And do not others speak of something else as the highest?"

"Some of the learned do declare purification of the spirit as the highest. But contrary to them some teach a doctrine of annihilation. -- those clever ones declare this to be (final liberation) without basis of life's fuel remaining. Knowing that these (theorists) rely on (mere opinions for their statements) a sage investigates that upon which they rely. Having understood and being free (from theories) he will not dispute with anyone. The wise do not enter into any existence."

-- vv. 862-877

Notes:

[1] Man's longings, hopes and aspirations and their satisfaction are his refuge giving him an aim in life.

[2] Judgements or evaluations of things motivated by craving for them or by opinions of them as being desirable or otherwise.

[3] The "appearing" of the pleasant and the "disappearing" of the unpleasant is judged to be "good". The "appearance" of the unpleasant and the "disappearance" of the pleasant is judged to be "bad".

[4] I.e., of the pleasant and the unpleasant.

[5] He is neither insane nor mentally disturbed (Comy).

[6] He has not attained the state of cessation of perception [of perception] and feeling (//sanna-vedayita nirodha//) nor the immaterial absorptions (//arupajjhana//) (Comy). In the former perception completely ceases, but in the latter there is still the perception of an immaterial object.

[7] According to the commentary what remains after these four negations is the state of one who has reached the highest of the fine-material absorptions (//rupajjhana//) and is in the process of attaining the first immaterial absorption. This answers the question "for whom does (the perception of) materiality disappear?" And as "pleasure and discomfort" have previously been stated to "have their source in sense-impression," in other words, the Perception of material objects, the second question is answered too.

[8] The term "spirit" (//yakkha//) is equivalent here to "being" or "man".

[9] An alternative rendering of this sentence could be: "Do not some of the learned declare (the immaterial attainments) as the highest state, as man's purification?"

* * *

18. MOGHARAJA'S QUESTION

//The Venerable Mogharaja//: "Twice have I asked Sakka[1] but the Seeing One has not answered me. I have heard a divine sage replies when asked a third time. I do not know the view of the greatly famous Gotama concerning this world, the next world and the Brahma-world with its deities. To him of supreme vision I have come with a question: how should one regard the world so that one is not seen by the King of Death?"

//The Lord//: "Look upon the world as empty,[2] Mogharaja, ever mindful; uprooting the view of self you may thus be one who overcomes death. So regarding the world one is not seen by the King of Death."

-- vv. 1116-1119

Notes:

[1] The name "Sakka" is used here as a title for the Buddha. It means, "a man of the Sakya clan." The Buddha is also sometimes called Sakyamuni, "the sage of the Sakyas."

[2] In the Samyutta-nikaya (vol. iv, p. 54) the Venerable Ananda asks: "How is the world empty, venerable sir?" And the Lord replies: "Because, Ananda, it is empty of a self or what belongs to a self, therefore it is said, 'the world is empty.'"

The "world," here and elsewhere, is not to be understood in the way we usually think of it, but is defined as the five aggregates (khandha) of material form, feeling, perception, activities and consciousness, or as the eye and visible objects, the ear and sounds, etc., that is to say, the whole of our subjective and objective experience.

* * *

19. PINGIYA'S REQUEST

//The Venerable Pingiya//: "I am old and feeble, the comeliness of youth has vanished. My sight is weak and I am hard of hearing. I do not wish to perish whilst still confused. Teach me the Dhamma by understanding which I may abandon birth and decay."[1]

//The Lord//: "Seeing heedless people afflicted and suffering through their bodies, Pingiya, you should be heedful and renounce body so as to not come again to birth."

//Pingiya//: "In the ten directions -- the four quarters, four between, and those above and below -- there is nothing in the world not seen, heard, sensed or understood by you. Teach me the Dhamma by understanding which I may abandon birth and decay."

//The Lord//: "Seeing men caught in craving, Pingiya, tormented and afflicted by old age,[2] you should be heedful and renounce craving so as to not come again to birth."

-- vv. 1120-1123

Notes:

[1] Jara: decay, decrepitude, old age.

[2] The Noble Ones or //ariya// are the Buddhas and their disciples.

* * *

20. THE NOBLE ONE'S TEACHING

"See how the world together with the devas has self-conceit for what is not-self. Enclosed by mind-and-body it imagines, 'This is real.' Whatever they imagine it to be, it is quite different from that. It is unreal, of a false nature and perishable. Nibbana, not false in nature, that the Noble Ones[2] know as true. Indeed, by the penetration of the true, they are completely stilled and realize final deliverance.

"Forms, sounds, tastes, scents, bodily contacts and ideas which are agreeable, pleasant and charming, all these, while they last, are deemed to be happiness by the world with its devas. But when they cease that is agreed by all to be unsatisfactory. By the Noble Ones, the cessation of the existing body[1] is seen as happiness. This is the reverse of the outlook of the whole world.

"What others call happiness, that the Noble Ones declare to be suffering. What others call suffering, that the Noble Ones have found to be happiness. See how difficult it is to understand the Dhamma! Herein those without insight have completely gone astray. For those under the veil (of ignorance) it is obscured, for those who cannot see

it is utter darkness. But for the good and the wise it is as obvious as the light for those who can see. Even though close to it, the witless who do not know the Dhamma, do not comprehend it.

"By those overcome by attachment to existence, those who drift with the stream of existence, those in the realm of Mara, this Dhamma is not properly understood. Who other than the Noble Ones, are fit to fully understand that state, by perfect knowledge of which they realize final deliverance, free from defilements?[2]

-- vv. 756-765

Notes:

[1] The "existing body" (//sakkaya//) is a term for the five aggregates as objects of grasping.

[2] //Anusava//; the defilements or //asava//, literally "out-flows," are dissipations of energy in the form of sensual desire, becoming (the perpetuation of existence), views and ignorance and are the same as the four "floods" mentioned earlier. One who has destroyed the defilements (//khinasava//) is another name for an Arahant or Perfected One.

THE BUDDHIST PUBLICATION SOCIETY

The BPS is an approved charity dedicated to making known the Teaching of the Buddha, which has a vital message for people of all creeds. Founded in 1958, the BPS has published a wide variety of books and booklets covering a great range of topics. Its publications include

accurate annotated translations of the Buddha's discourses, standard reference works, as well as original contemporary expositions of Buddhist thought and practice. These works present Buddhism as it truly is -- a dynamic force which has influenced receptive minds for the past 2500 years and is still as relevant today as it was when it first arose. A full list of our publications will be sent upon request with an enclosure of U.S. $1.00 or its equivalent to cover air mail postage.

7. The Eightfold Path: Right Concentration

~~~
~~~

pay attention, to see if there will be a breath. The baby's grandmother who had done a lot of retreats, died of lung cancer a few years ago. She had developed lung cancer earlier, and had a remission and did her last dance rather wonderfully and admirably. Then when the cancer came back and she finally died, in her whole last week when her lungs were filled with fluid, she talked about waiting to see if the next breath would come, whether she would be able to breathe the next breath. She was so grateful for the meditation she had done. She said otherwise it would have driven her crazy, but here it was, it was something she could really use, and she did that for her whole last week of life. She died in a very beautiful way.

Our breath is kind of a mirror for us. Most of the time we don't look in that mirror. It's the mirror of our energy, it's the mirror of our openness. Feel how full your breath is at different times. If you want to see what's happening in you, pay attention to your breath. Is it real big, can you take a nice full sigh? Sighs are wonderful. Do you know about sighs? Everybody takes sighs, generally about once a minute, as far as I know. We do! I noticed more because of my father being on the respirator from his heart surgery two months ago when I was there. They put a tube in his throat and they have this respirator which breathes for you when you can't breathe. It has this funny thing on it. It has a little dial on it which says, "Sigh Adjustment," and you have to sort of get it right for that person. It will make eight regular even breaths, and then there will be this big breath that it takes for you. It does that because it's part of the normal respiratory system to take regular sighs, regular big breaths. It was wonderful to see. It kind of made concrete this sense of what the breath is when it is big, when you can sigh, it is a kind of letting go. That's beautiful. So sigh. Let yourself sigh once in a while. Make it your meditation.

The breath is a mirror of how we are. Have you observed your breath when you're afraid? What does it do? It gets short. What else do you observe with your breath? It gets more rapid. Sometimes it stops. Can you feel what it does in your body? For a lot of people the diaphragm won't move hardly at all and there will be a little breathing from the chest. All kinds of changes happen with fear.

Observe it. If you want to learn about fear, one good place to start with is the breath. Or when you are angry, what does your breath do? Or when you're passionate, or when you're calm, or when you're in a traffic jam, what does your breath do?

You can learn a tremendous amount in this very simple mirror of working with the breath. You can learn about openness. How does it affect your heart? When your breath is really open, what is your heart like in terms of your feelings and openness, your connection with people around? When you feel your heart closed, without judging it, look and see what your breath does and what it's like. Does this make sense to you, that you can use the breath in some way? It doesn't mean to say that the breath is always going to be wonderful and open -- That's like saying your heart should always be soft and wonderful and open. I don't know; it's not my experience. It's like flowers, they open and close.

I remember a very important and extraordinary lesson. I was sitting around with Robert Hall, whom some of you know, who is a Gestalt therapist and body worker, and one of the people who started the Lomi School. He spent a lot of years in his own practice of developing ways of working with the body, and opening, and energy, and breathing. We were reading a book about the life of Ramana Maharshi, this great Indian saint. And there were some pictures of Ramana Maharshi in the last part of his life with cancer, and his body was contorted and twisted and it looked tight. It certainly looked like he couldn't breathe very well, it looked like he couldn't move very well. And the description from the people who were with him was that he was in pain, and that he would go to sleep, and there would just be these moans and things that would come out of his body. And at the same time his eyes were exactly the same as those pictures of five or ten or twenty years before. They were wide and bright and completely clear, and there was just this real sense of depth and love. Robert looked at that and he said, "My God, here I am trying to get people to open their bodies and it really has nothing to do with it, does it?" That's not completely true. It is one end of the spectrum, but it is also true that if you breathe and if you open, and if you run, and if you exercise, that the physical opening helps the heart and the mind to open. .

In fact, the heart is the heart, and it can be open in fire and it can be open in ease. But for most of us, and most of the time, breath is a mirror. It's really something to work with. You can work with it in martial arts as a way to martial your power. You can work with it if you have meetings. If they're boring or difficult, go to your breath, do ten breaths, where you just pay attention to your breath, and you'll find all your relationship to all the circumstances around you change. It's a practical tool for living in the world. Now, what makes it practical, what makes it useful?

What makes it useful, aside from the fact that it's a mirror, is that it's the place to learn the art of concentration. Concentration has two parts to it. One part is the quieting or the tranquility. Without that we don't so often hear the voice of God, as Mother Teresa said. She says:

> We need to find God -- or whatever you want to call it, our true nature -- and this cannot be found so easily through noise or restlessness. God or truth is a good friend of silence. See how nature, trees, grass grow in silence. See the stars, the moon, the sun, how they move in silence. The more we receive in silence, the more we can give in our actual life.

The first part of this element of concentration is using the breath to learn to become quiet or tranquil, to become still; not to seek quiet so much but to slow down. Our culture is so fast. We fill up our lives all the time. I know it very well when I look at my schedule book. I lived for ten years without a schedule book while I was teaching -- until I got married and had a baby, and all that stuff. And it was really a shock to get another day-by-day or week-by-week schedule and start filling it up again. It's not just that. It's the speed of the traffic, it's the speed of the news, it's the speed of our interaction. Somehow in it, we forget. Do you know what it means to go for a walk for a little while on Mt. Tamalpais or down to Point Reyes or somewhere in the country, and what it does for our ability to feel the sea of air that we live in, or to stop and

reflect what we care about in our lives, or to feel the tension in our body, and somehow let it melt a little bit, or to spend time alone, to listen? Somehow I think that our speed is partly what makes the bombs. I don't think we could do it if we were slower. I really don't. So that's the first part of concentration, just slowing down a little bit, letting things settle, stop waving our arms so much.

The second part I want to go into in some depth for the next twenty minutes or half an hour is really to talk about what it's like to work with the breath as a vehicle for concentrating the mind and heart. It is somewhat technical. I've given lots of other kinds of talks. Hopefully, they are of some use for you if you're doing some regular meditation.

To concentrate the mind means to collect it, to have it become steady or one-pointed, like a candle flame in a windless place, where it's steady and it doesn't flicker so much. Every great spiritual and yogic tradition works with concentration. Do you know that? Whether it's the Hasidic prayers or the Jesus prayers or mantras or the shamans who do certain kinds of incantations or rites to concentrate the mind, not to speak of Buddhist and Hindu yogas of every kind; they all work with concentration. Do you know why that is? Do you know why? Does anybody have any idea why? Why is concentration is so stressed to collect, to concentrate the mind -- do the breath, do a mantra, focus on a light, focus on a prayer, do it over and over again, sit out in the woods as an Indian and roll a little stone around a big one until your mind gets concentrated and you have visions? Does anyone know?

THE AUDIENCE: Just to keep you present?

JACK: That's the first part of it. That's very nice. Because you can't understand what's real or true except in the moment. Otherwise, it is thought about past and future, so it's fantasy. So that's one good reason. What else?

AUDIENCE: Gives you something to work with, collects your mind so you can use it.

JACK: Collects your mind so you can use it, and it gives you Something to work with, which means it gives you a vehicle to collect it. Is that what you mean?

AUDIENCE: Yes.

JACK: Okay. So that's another reason to concentrate, in order to find a way to collect the mind. Collect the mind to be present. Why else collect it, why else concentrate? Any other reason?

You hear of all these yogis in Egypt and the Desert Fathers, in India and the Taoist monasteries learning concentration exercises. What for?

AUDIENCE: For me, it's like my energy is running off in all these different directions, until I can collect my energy and focus it.

JACK: So it's a way of focusing energy. That's another good answer, another good part of it.

Mind is like light energy, and it can be focused in several ways. If you begin to concentrate it, it's like collecting light energy in a laser. Instead of having it scattered in all directions, if you concentrate, the power of mind becomes usable when it's collected. You can train it at something and penetrate it. Another image to use is that of a lens. If you concentrate the mind, it's like grinding a lens. If you focus and you concentrate, and you come back again and again, and it becomes steady and still, you can see as if the mind were a microscope or a telescope. You can see into all other realms of consciousness through the power of concentration. Concentration is the main vehicle in almost every yogic and spiritual school for altering our level or our perspective of consciousness.

When the mind is scattered and filled with thoughts, mostly all you see is your ordinary reality. Ordinary reality is real too, but part of what helps free us is to see that it's relative, that there are some other perspectives in life. And concentration is the vehicle to

discover those other perspectives. It's also the way to learn to live in the present moment, so then you can see what is true.

Suppose you were to start and work with concentrating on your breath, what would the stages or steps be like as you followed it? Here are some of the things: The first is that you just learn to get here as suggested. Okay? You count one to ten, or you count one to a hundred, or a hundred to zero backwards, or you note the rising and falling of the chest or in and out of the air, and finally you start to become more present.

Ryokan says:

> My hut lies in the middle of the dense forest.
> Every year the ivy grows longer,
> no news of the affairs of men,
> only the occasional song of a woodcutter.
>
> The sun shines,
> I mend my robe.
> When the moon is out I read poems.
> I have nothing to report, my friends.
>
> If you want to find the true meaning,
> stop chasing after so many things.

That's the first step for us in watching the breath, not chasing. Here's an ad I just cut out:

> HOW TO GET WHAT YOU WANT:
>
> Admit it, you want something bad, a new car, a bigger house, a more challenging job, a clean garage, a chance to unload that stuffed wolverine. You want something and you want it now. But it takes more than the power of positive thinking to make your dreams come true.

The first level of working with the breath, of watching it, not chasing after so many things, is counting, is watching the in-and-out, it's just getting here with the reality of the moment, of the breath coming in and out. That's already a lot, as you probably noticed in sitting an hour and trying to work with your breath. I don't mean that one exclusively works with the breath, because in vipassana we work with sounds and thoughts and feelings, but tonight I just want to focus on the power of working with the breath.

First you get here, you count, or you feel the in and out, or the rising and falling. Then the second level is that you can start to relate to the space between breaths. Has anyone done that in working with the breath? So you see, there's the in-breath, and there's the out-breath, and there's the rising and falling, and as you get a little more silent you start to see, "Hey, there's some room in there, there's some space." And it has two important points. One is that it begins to teach us to relate to something that's less than busy and full all the time, just teaches us to relate to the elemental quality of silence, of openness, of space, by feeling the space between the breaths.

We don't take enough time to sense space, we keep filling it up. So this little thing in the breath has something to teach us. Or if you like -- this is a technique that's useful for some people -- you can begin to use that space as a way to further continue the refined concentration by working with some points of touch. For some people they just sense space, in-out, then, "Ah, there's some space," and then the breath comes again, out of nowhere. For others, because the mind wanders a lot in that space, and it's difficult, they find it valuable to be aware of the touch point, of the lips touching together, or the hands in the lap, or the buttocks on the cushion -- in-out, touching, rising-falling, touching, in-out, lips touching; so that things start to become continuous and the mind doesn't wander off.

W. S. Merwin in this poem says:

First, forget what time it is for an hour.
Do it regularly every day.
Then forget what day of the week it is,
and do this regularly in company for a week.
Then forget what country you are in,
and practice doing it in company for a week,
and then do them together for a week
with as few breaks as possible.

Follow these by forgetting how to add
or to subtract.
It makes no difference.
You can change them around after a week.
Both will later help you to forget how to count.

Forget how to count,
starting with your own age,
starting with how to count backwards,
starting with even numbers,
with roman numerals,
starting with fractions,
with the old calendar,
going on to the alphabet,
forgetting it all until everything
is continuous and whole again.

This is the second step, of somehow learning to relate to space or things which are disparate, and our mind which is scattered -- it comes back to being more whole again. So we start to watch the breath, and we get to the point where we can let go of the past and the future and be a little more present, and there's the in and out, and we can relate to the space between breaths, and we see the breath as the mirror of our emotions. You can learn a lot. You can learn a lot by observing anything. Here we're just going into one little aspect of experience, our breath.

Then what comes, as you can relate to the space and the touch point more, you get to the point where you can let go more. It's called,

"Letting Go of Some Control." And in truth, one of the greatest aids to concentration is relaxing. Concentration isn't a forcing of your mind on your breath, or on the pain, or on the pleasant sensation, or on the thought. It's much more a sense of the opening, of the softening, of the receiving. That's what allows the mind to settle, to settle on the breath, to settle on the sensation, to settle on the sound. It means our learning how to not control so much.

Have you noticed, for many people, when you start to work with the breath, there's this tendency to hurry it up, or to move it, or to change it, how it takes a little while? It takes some systematic training to work with the breath, where finally it just breathes itself.

I remember this friend of mine, an old Tibetan monk who I met in this forest monastery. He was actually Hungarian but he ordained with the Dalai Lama years before. He said the Dalai Lama let him go up in the mountains and visit the hermits who were in their caves, who saw almost no one. He went with one of the Dalai Lama's teachers, Ling Rinpoche. He visited them. He was kind of a neophyte at that time, just learning. These people had spent 20 or 40 years in their caves or their little huts. He said, "Well, what technique do you use?" They said, "Techniques?" He said, "Yes. Do you use a mantra, do you follow your breath?" He said the first time he asked about that one of them just laughed and laughed. He said, "The breath, it breathes itself." That was all he said about it, the breath just breathes itself.

This is the letting go, of actually seeing that the world has a natural order that runs itself. We try so hard to control it. Take a rest, you know; put your feet up a little bit. You don't run your heart or your liver, and they do real good without you, you know. "Ah."

There's counting and there's getting here. There's the space between and relating to space, and the touch point. And then there's learning to let go and relax a little bit, and start to sense the natural order rather than controlling. The breath is a vehicle for seeing, like anything else. You can start to see in a more refined

way, you start to see the beginning and the middle and the end of the in-breath, or the beginning and the middle and the end of the out-breath. That's an amazing thing. Most people never saw the beginning of a breath in their whole life. Why is it valuable? Who cares? So what if you can see the beginning of a breath, what's its purpose? Anybody got an idea?

THE AUDIENCE: You see that it comes and goes, that things come and go.

JACK: That's very nice. That as you start to listen, if you really concentrate, you see that wherever you are is being born and is dying; that every breath is a birth and a death; every movement, every sensation, every sound, every sight. You start to relate to one thing that maybe we need to learn about -- besides love -- and that is birth and death; that is, the arising and passing of things.

Here the breath is teaching you about the thing that everybody wants to know: What happens when you die? A lot of people do! For some people it's the last thing they want to know. "Don't tell me, I don't want to hear." But a lot of people want to know. If you want to know, look at your breath, the beginning, the middle and the end -- so you start to see it more clearly.

There's a beautiful //sutra// on the mindfulness of the breath, and here the Buddha says to some monk: Go, you guys, and find yourself some comfortable tree root underneath some tree out there, and cross your legs and sit down and close your eyes, and see if you can discover the whole nature of the world from your breath. It bears great fruit; cultivate it regularly; bring it to perfection. First, breathing in long, I know I breathe in long. Breathing in short, I know it's a short breath. Experiencing the breath in the whole body. Calming the body with the breath. Observing the breath as it arises and passes, calming the mind using the breath. There's this whole set of instructions, two thousands, three thousand years ago saying: Okay, if you want to understand about life and death, very, very simple, here you are: go take this and work with the breath. Sit down in some quiet place and you will begin to discover it.

The next stage is refinement -- seeing the beginning, the middle, the end, what breaths are long, which ones are short, when it's held, when it's released. Then more refinement, which I'll get to: the four elements, and the mind and body. I'll get to that in a bit. So you start to refine it. You see, "Oh, here's birth and death; here's the beginning and end of things."

Then the next stage is what I call Training the Puppy. It's like, "Okay, stay," and the puppy gets up. "Stay," and it gets up and runs around. "Stay", and you do it a million times, and since the inner puppy is much more recalcitrant than the outer puppy, it finally starts to begin to learn. What's involved in training a puppy? Has anybody ever trained a puppy, outwardly trained a puppy? First of all, it takes some patience, doesn't it? Okay. And you have to be willing to let it shit all over a little bit if you want to have a puppy house broken or sit down.

Similarly it's true with the mind. As you start to concentrate, you will meet a wall or a sea of resistance. It's called //kilesa// in Sanskrit or Pali, which means "hindrance" or "defilement". It really means "burning in the mind." For example, if you try to do a kind of macho, and muscle your way into concentration, which you can do if you want -- you can experiment with it. Say, "I'm just going to concentrate on the breath and not let my mind move" -- try it for an hour, and you will see what I mean about fire, because it is very hard for the mind to slow down. It has its own momentum like a flywheel. Your mind will kick up and throw out every reason to stop. There will be old angers, new desires, pains in the body, sounds, reasons to move, and every possible thing other than feeling the breath. It's an interesting experiment to do, just to try it, not because that's really the way to learn to concentrate -- you'll wear yourself out. There is a way to do that, but it's very, very hard. Why not take it a little easier? It actually doesn't take that much longer as long as you're persevering, but you can do it. And what you discover, even when you do it more gently, is that as you start to collect it, all the resistances come up: fear, desire, anger, distraction, plans, or memories.

Part of what it means to concentrate the mind is to purify it. I don't use that word so often, but it's an important one for this learning how to deepen meditation. Purification means that there are all these forces of grasping, of fear or anger, or whatever, that keep pulling us in every direction, and to collect it or to balance it means not that we get rid of these, but that we learn somehow to let them come. And almost like the fire that comes and burns through, we don't grasp it -- we let it come and we let it go.

In watching the breath, if you start to work regularly with the breath, maybe you do it half of every sitting, or some part of your practice, then all the things which we call for the moment //kilesas// or fire or hindrances, they will all reveal themselves to you. The purification is to honor them, to give them a little kiss when they arise, let them go gently, to see them, and then come back again to the breath. And they are powerful. They are the force that kind of pull the mind around in circles.

The first thing in training the puppy is that you come to your resistance and you learn about what it means to work with resistance. If you struggle against it, it makes it twice as hard, and if you do it gently and say, "Oh, there it is, there's desire or anger wanting to take me away again," you let it go, and come back. You can really learn how to train the puppy, how to train the heart.

Once you've gone through the resistance, then the next thing that happens in training the puppy is a sense of interest. Then it's borne more fully out of this. There are two ways to express it. The first is that as you get through the resistance, even watching the resistance is actually very interesting. Has anybody ever seen what it's like when they try to put their mind somewhere or what it does? It's like a fish out of water for awhile, it just flops everywhere. Look at it! It's interesting to see what it is that keeps us out of the moment.

After awhile, as you do it, and you keep bringing it back again and again, the breath starts to have its own interest, which is like

reading Agatha Christie. In the beginning the story may or may not be interesting but as you go along and you get the plot and you get all the intrigue, you really start to wonder who did it and what's going on. Similarly with the breath. At first it's difficult, but if you work with it for a while, it actually starts to become interesting. And just when you're reading Agatha Christie near the end and someone walks in the room, you don't even hear or see them because you're so interested in "who done it."

When you finally get through some of the resistance and you really start to concentrate on the breath, it gets interesting, and all of those other things which had disturbed you pass away much more easily, and you actually enjoy feeling it and seeing what it's doing.

Now, the kind of interest one sometimes needs to go through is the Zen story of a young boy going to this master who has a monastery on a stream, and saying, "Please teach me." And the master says, "You're not really sincere." "What do you mean I'm not sincere? I want to learn." The master says, "Go away." And the boy comes back again and again. Finally, this young boy comes and says, "I really want to learn." The master says, "No, you don't," and he grabs him and throws him in the water and he holds his head down under the water. The boy is kicking and screaming. Finally he lets him up when he's just about blue and out of breath. The boy asks, "Why did you do that?" The master says, "When you want to learn what I have to teach as much as you wanted that breath, then you can come and I'll teach you." That actually comes of itself.

Interest is something that also can be cultivated, can be nourished, can develop. If you work through these things that come, and you stay with it, there's an interest that comes all by itself. It's one of the factors of enlightenment; it starts to come by itself.

So it's training the puppy, working through the resistance, having the interest arise, and then you get to what Suzuki-roshi calls, "Burning Completely." He says:

> In order to not leave traces with your thought, when you do

> something, do it completely with your whole mind and body. Like a good bonfire, you should not be a smoky fire, but learn to burn yourself completely. Throw yourself wholly into whatever you do.

That's an art, that's a gift, to love a person, to take a walk on the beach, to paint, to dance, to do your taxes, but to do them completely and not do something else at the same time. If you'll save a little more money when you pay attention that way, I don't know. But do things really completely.

There's training the puppy, going through the resistance, and discovering that the breath actually has a lot to teach you, that it's interesting. Then the next is coming to rest. When you've finally done that, and you start to get interested, and you've done it for awhile, you come to rest on the breath. It's like what Don Juan says, "Stopping the internal dialogue" of trying to plan, and remembering or going off into the past and future and worrying, all of those things. No trace of thought, finally coming back to where there is less desire, instead of trying to keep bringing your mind back. At first, it's like a mountain, and you climb up to the top and you balance and stay on your breath, and then you fall off into sleep or restlessness, and then you struggle up, and there you are with the breath or in the moment, and you fall off, and after awhile it becomes like a valley. You do it again and again and again. Finally, you actually start to settle on the breath. It's like the mind comes to rest in the body. It will go off in sleep or restlessness or desire, but then it slides back down and you come to rest in the moment. And it's delightful, coming to rest!

Out of the coming to rest, then come the Factors of Enlightenment. There comes lightness and joy and a tremendous sense of ease; and the body, once it starts getting concentrated, changes completely. Even if you wanted to slump, you can't. The energy opens up, the breath opens up, and you just sit up straight. You can sit up straight for hours when the breath is open and you're concentrated. It happens all by itself. You don't need so much sleep either. That's good when you have babies and things like that. It happens all by itself.

And then something else comes -- light. When you really concentrate on the breath, or whatever, this very peculiar thing happens. With your eyes closed, there comes light in the mind. Some people see it as clouds, some see it like headlights turned onto them; some see it as a bright sky or sun; some see it initially as colors of green or blue, but later on it turns into white light. I don't know why, but when the mind is concentrated, it fills with light. It's not that far away. It's really accessible to a lot of people.

This afternoon I was reading these essays by Lewis Thomas. In one of them he said:

> You know, we're so afraid of God in this country, in this century, in this scientific mind that we have. Even though we talk about the creation of the universe -- the scientists call it, "The Big Bang" -- there is no bang. For sound, which is a very gross level of energy, you need air for sound waves to travel. There was no air. it was empty dark space. There were no ears to hear it. There wasn't sound. What it really was, instead of a big bang, it was the great light.

That's a more accurate description, whether it's true or not, of what that first cosmic explosion was, or whatever you want to call it. It's a little scary to call it "The Great Light," it's a little bit too spiritual. So we'll call it "The Big Bang." It's sort of like a tank or something like that, and scientists can relate to it in some way. So what happens? You come to rest and you come to this sense of peace and then spontaneously in the mind comes light. It's this fantastic thing. That's part of the reason why all these yogic and other traditions also work with concentration, because it opens the mind and the heart to allow our natural light to shine. And it's literally light. I mean, you can sit in the dark and it seems like lights are being shone on you, many, many kinds of light. The mind becomes stable and joyful, rapture comes when it's peaceful.

Why is there joy when the mind is concentrated? Does anybody have any idea?

THE AUDIENCE: Freedom from yourself.

JACK: That's a good one. Getting away from oneself is always a treat. Why else?

THE AUDIENCE: It's a natural state.

JACK: It's a natural state, so there's rest. There's another simple reason.

THE AUDIENCE: There's nothing else you want.

JACK: There's nothing else you want, which is to say, when you're really concentrated, the rent check, your girlfriend, your difficulties with your parents or your children, next year's travel plans, all are gone because there's no thought. The past and the future have disappeared, and when they're gone it gets very groovy. It gets real quiet and very happy because there's no worry and there's no fear. Fear is always about something that hasn't come, so is worry, so is desire.

This is kind of the anatomy of what the present moment can have for you in some ways. You get to this level of lightness, joy. Now, the ability of mind is another thing that happens. If you train concentration, you get to a point where this amazing thing happens, where you decide, "I want my mind to be here, to listen to sound." You put it there when it's trained in concentration, and it just stays there, and you listen as if you'd turned the radio to a particular station and it just stays there. There isn't thought or restlessness and interruption; it just stays there. Or you say, "I want it to focus on this," -- small or large -- and the mind becomes malleable, shapeable, movable. It's the most delightful thing; it's fantastic. And you can do that.

These kinds of education aren't part of our school system, but they are really our birthright. It's the training of our own heart and our own mind so it becomes joyful and light, peaceful and malleable. Then

what happens? Guess! Are you ready?

THE AUDIENCE: You try to hold on.

JACK: You get attached, that's right. It's called, The Corruptions of Insight which arise, the defilement of Spiritual Materialism in its refined form. You say, "This is groovy, I want more of it." It's like any other drug. And you get attached to the light, or the lightness, or the joy, or the peace, or whatever it is, and then you find that you're stuck there. So you have to discover even in that moment that there's some deeper level of freedom. You're still working with the breath and all these states come and you try to hold them. Let them just come and go. Those too are not freedom; they're simply very groovy states of mind. They're very pleasant, they're illuminating, light and peaceful but they're temporary. Has anybody had a state of mind stay? Somebody last week yelled out "ignorance". In general, it's not the case. Do you know what I mean?

So you do this, and you get to where the mind becomes stable and clearer, and so forth, and you're with the breath and it becomes so fine. It's like the tiniest leaves or the littlest movement. It's almost like the body breathes rather than the breath breathing, or the spring air comes and breathes you. It's wonderful. And the state of mind is very peaceful and you stop grasping it.

Then you reach what's called Access Concentration. "Access" means it gives you access to all the realms and all those weird spiritual texts and things you read about, because at this point there are very few thoughts. You rest in the present moment. The mind is very clear, and tranquil, malleable, alert and mindful spontaneously, without struggle. There's a kind of clear seeing. Then things start to reveal themselves to you out of this Access Concentration. It's almost as if the mind or the lens is clear, like a crystal goblet, and you can see deeply with a microscope or a telescope way out into space.

Has anyone heard of the biologist named Agassis? There's a big museum of glass flowers at Harvard. He was one of the great botanists

around the turn of the century and before. A student of his went to begin his training as a botanist in the l880's, and Agassis took him and said, "You want to learn to be a botanist or a biologist. Here, take this fish," and he took this kind of dead fish and sat it on a piece of glass in front of him, and he said, "Study it, observe it, and tell me what you can see about it." Then he went away. He left the student there in the morning and he went away for the whole damned day. The student stayed there for awhile. He looked. There's a dumb dead fish, right? He really got bored and more irritated that his mentor and teacher didn't come back. "What did he want? Sure it's a fish, it's got fins, it's got eyes, it's got scales, it's got six fins, it's a six-fin fish, and it's got a little yellow over here near the gills, or something like that." There was nothing especially interesting about it. It was like many he had seen before -- scales, mouth, eyes, yes, a tail. In an hour he thought he had seen all there was to see. Time rolled on and the teacher didn't come back for a long time. He was getting angrier and more irritated. Finally, after he had gotten back from lunch, he was so discouraged. He wished the dumb old man had given him something more interesting. Then in order to kill time, he sat down with a piece of paper and he started to draw the fish, "Alright, I'll draw it." In drawing, he began to notice things. He discovered, for example, the way that the scales overlapped one another, and then he began to see as he drew the eyes that the fish didn't have any eyelids. Then he began to see the textures of the veins in the scales. He kept on looking and drawing and it got very interesting to him, and he drew for the whole afternoon into the evening.

Agassis came in and looked at his drawing and said, "You haven't even begun to look at this fish yet." The guy was heartbroken. The teacher said, "I'll come back in a couple of days. You let me know what you can really see in the fish." He spent two more days drawing different sides and aspects of the fish. And he said those three days, that particular training was the foundation of his entire graduate work and his whole career as a botanist.

We're not taught that so much in our culture. But here we are with the breath now. We're up to the level of Access Concentration. As

you sit and start to get quiet, you're at the level where you're in the present moment, not so distracted by other things, and really with the breath, what can you begin to see? You see the four basic elements that make up the physical world, what Plato called, "Earth, Air, Fire and Water, and maybe the Egyptians or the Indians throw metal in there as well. I don't know why. More or less the same system. They aren't some theory -- earth, air, fire and water -- they are a description or actually how you perceive physical matter.

Put your hand on the floor for a second. What do you feel? Tell me what you feel.

THE AUDIENCE: Hardness.

THE AUDIENCE: Softness.

JACK: Hardness or softness. What else do you feel?

THE AUDIENCE: Cool.

JACK: Temperature. What else?

THE AUDIENCE: Rough.

JACK: Rough. Okay, so there's the texture. What's the roughness? Go into it with your attention. What does roughness actually feel like?

THE AUDIENCE: Highs and lows.

JACK: Okay. So it's shape, but it's also different areas. Pay attention. See if it's not different areas of where it's hard here and soft there; just hardness and softness alternating. What else do you feel? So there's temperature, and then different areas of hardness and softness. Anything else?

THE AUDIENCE: Dry.

JACK: So you feel whether it's moist or dry.

THE AUDIENCE: Flexible.

JACK: So there's movement, the solidity or lack of it. Anything else?

THE AUDIENCE: Space.

JACK: What's the space? I don't feel space.

THE AUDIENCE: Between the hardness.

JACK: So you feel points of hardness and lack of it. Okay. What else? One more thing to look for especially. It's still, it's not moving. Can you feel that? Okay. Do you feel "floor"? Anybody feel "floor" or "carpet"? No such thing for your hand, but there is this hardness and softness.

Similarly with the breath, if you observe it, instead of there being an in-breath or an out-breath or a rising or a falling, if you look at it closely like the guy looked at his fish, what do you see? You see what's called the Fire Element or the Temperature Element. Sometimes parts of it are cool or hot. You see temperature or you experience temperature. You see the Earth Element, which really is the element of hardness and softness, and sometimes there's pressure, which is more hardness, and sometimes there's not much pressure in it and it's soft, or there are little dots of pressure and space in between where there's less pressure. So you see hardness and softness in the breath, you experience hot and cold, you experience fluidity, the Water Element. And the Air Element is really the element of motion or vibration, so you experience it when it's still or when it's vibrating or moving more.

Does anybody ever experience anything else through their physical senses? Temperature, pressure, hardness and softness, movement, solidity, vibration. So what happens when you observe just this simple thing of the breath and your mind is concentrated? Play with

it in your sitting. It doesn't have to be that concentrated, you just have to get here some. You can start to see that what you thought was breath or floor or wall through your body senses is actually this play of the basic elements. You can find everything that Plato and the Chinese philosophers and all these other people who are physicists have looked at. What is basic sense perception made of simply in the breath? There is no breath. There's coolness, there's little tiny, very soft pressure; there's vibration and movement; that's all. You know in the belly there's expansion, which is a different shape of that same pressure, and hardness and softness. That's it! And the whole world, instead of being solid, starts to reveal what its nature is, which is the play of the physical elements.

Then you'll start to see the mind, the Mental Elements. This is called //nama// and //rupa//. //Rupa// is the Physical Elements that you perceive, and when you look closely they're all a dance, they're all changing. There's no floor, there's no wall, there's just changing sensations. This is using the mind as a microscope. When you start to look closely and to experience it, it seems solid on this level, which it is, and you can use your mind the same way someone uses a microscope. You look down into the pond water and you see it's alive with things. And if you look at anything closely with your concentration and awareness, it dissolves into a changing dance of sensations. And then the Mental Elements, which are feelings and reactions and the consciousness which knows it. I won't go into that so much tonight, but you start to see the play of these two things, of Physical and Mental events. That's all that there is, this dance of light and shadow and the perception of it. You see more deeply the arising and passing of things then, so you get to a deeper level of birth and death, and you see that not only every breath, but every sense door, every sound, every sight, becomes vibration. Everything that you look at from that refined quality of the breath starts to teach you the movement of life; Impermanence; The Dance.

You can learn so much just watching your dumb breath, really, and there's a lot to be seen in it. And at times admittedly it's boring. You learn about boredom when it's boring.

And finally, the last thing to say about it tonight, just to go into this a little more, is that at that point one also has the possibility, besides the discoveries of insight, of seeing that it's really changing, arising and passing mental and physical states, empty of any person, no separateness at all. All the kinds of wisdom that one reads about are available in just observing the breath.

One can also enter all the realms of what are called //jhanas// or high states of concentration. When the mind becomes so settled on the breath, then there arises joy, rapture, tranquility and concentration, and the concentration is applied and it stays there; it's sustained. You can turn your mind to space and just experience what it's like to be with space without any wandering of mind, the formless //jhanas//. You can turn your mind to a color, blue or green, and develop it until the whole mind becomes filled with a particular color and the energy of that color. Then, when you do this, and you cultivate it really well, you have Access Concentration. If anyone is interested in this level stuff, most of which I have not done -- I've played with it a little bit, not the powers part -- in this book, "The Path of Purification," there are chapters on how to develop concentration, and then ones with all the psychic powers, because all the powers of mind come from the power of concentration; how to read other people's minds or how to walk on water or how to do all these things. I don't know whether you can really do them. I haven't seen many of them done except maybe reading of minds. But it's said that they all come through this tremendous power of concentration.

The way to walk on water apparently, if you want to know, is to develop concentration to this very high degree where the mind is totally stable on the Earth Element until you become like the earth itself, and then you focus on the water and you walk on it. One of the teachers where I studied in the Sun Lun Monastery said:

> In these days, although concentration of mind and some of the insights and opening are very possible, many, many people can do that, the level of concentration for the supernormal powers are difficult to acquire.

Let us say that one practices the Earth Element exercise and gains a mastery of it. To do the psychic power stuff, you not only have to be able to attain these very high levels of stability of mind, but you have to master it so you can go in and out of different ones in a moment's notice. Suppose you've mastered it, and I know a few people in Asia who have mastered these things to some extent.

> Let us say that such a yogi then goes to a pond and seating himself near it, arouses in himself the element of the earth meditation. Then looking upon the waters of the pond, he endeavors to turn them into earth, so that he may walk across them. He will find these days at most that the water thickens to a slushy earth which cannot really uphold his feet when he attempts to walk on it.
>
> Perhaps yogis in other countries have done better than I, but I believe the times not so opportune as they used to be.

This guy is furious.

I'll read one poem from Kabir to end, and you may have heard it before. This is Kabir, a wonderful Indian poet. He's talking about a clay jug, which means one's own body or a clay jug; it doesn't matter; they're the same. He said:

> Inside this clay jug, there are canyons and pine mountains
> and the maker of canyons and pine mountains.
> All seven oceans are inside, and hundreds
> of millions of stars.
> The acid that tests gold is there,
> and the one who judges jewels,
> and the music from the strings no one touches,
> and the source of all water.
>
> If you want the truth,
> I will tell you the truth,
> friend; listen.
> The God whom I love is inside.

How can you see that in your body or in a cup, whatever cup you want, all seven oceans and hundreds of millions of stars? You can, through your inner vision, through the eye of concentration, birth and death, and every realm of existence is possible through this collection and concentration and focusing of the energy of mind. Like a laser, like a telescope, like a microscope. I'm not suggesting that you do all that yogic stuff. It's fun but it takes years and lifetimes to do some of that stuff. It's good, it's nice to do. However, in a much more practical way, you can work with the breath. You can take half of your meditation every day, fifteen minutes or half an hour. You can work with it when you are running or jogging. You can work with it when you're in a meeting, how to calm down. When you get really quiet, and you take some time to meditate for part of a day or you sit, then you can start to really study it like it was that fish or like it was a flower. And in it you can learn a lot about birth and death, about all the resistances and the fears and the fires, and what it's like to let go of them and to rest in the present moment. You can learn a lot about the elements that make up who we are, the physical elements, the mental elements, consciousness itself. All of that can be revealed in the simple thing of observing the breath.

I give it to you tonight as something to talk about, to give you some sense and maybe a little inspiration, that even in this very rote and simple exercise, there are worlds to discover. Just as if you could take a flower and pick it and really look in it and understand that one flower, you could understand everything in one flower.

CONDENSED BREATH MEDITATION by K. Khao Suan Luang (Kee Nanayon) Translate (Geoffrey DeGraff) There are lots of people who are ashamed to talk about their own de but who feel no shame at talking about the defilements of others. Those who are willing to own diseases--their own defilements--in a straightforward manner are few and far between the disease of defilement is hushed up and kept secret, so that we don't realize how seriou it is. We all suffer from it, and yet no one is open about it. No one is really interested in diagnosing his or her own defilements.... We have to find a skillful approach if we hope to disease, and we have to be open about it, admitting our defilements from the grossest to levels, dissecting them down to their minutest details. Only then will we gain from our prac we look at ourselves in a superficial way, we may feel that we're already fine just as we are all we need to know. But then when the defilements let loose with full force as anger or d pretend that nothing is wrong--and this way the defilements become a hidden disease, har hard to diagnose.... We have to be strong in fighting off defilements, cravings and illusi every sort. We have to test our strength against them and bring them under our power. If them under our power, we can ride on their backs. If we can't, they'll have to ride on our making us do their work, pulling us around by the nose, making us want, wearing us out in ways. So are we still beasts of burden? Are we beasts of burden because defilement ar riding on our backs? Have they put a ring through our noses? When you get to the point w enough, you have to stop--stop and watch the defilements to see how they come into bein want, what they eat, what they find delicious. Make it your sport--watching the defilements them starve, like a person giving up an addiction...See if it gets the defilements upset. Do hunger to the point where they're salivating? Then don't let them eat. No matter what, dor what they're addicted to. After all, there are plenty of other things to eat. You have to be them--hard on your "self"-- like this..."Hungry? Well go ahead and be hungry! You're going Go ahead and die!" If you can take this attitude, you'll be able to win out over all sorts of addictions, all sorts of defilements--because you're not pandering to desire, you're not nour desire which exists for the sake of finding flavor in physical things. It's time you stopped, gave up feeding these things. If they're going to waste away and die, let them die. After all you keep them fat and well fed? No matter what, you have to keep putting the heat on yo defilements until they wither and waste away. Don't let them raise their heads. Keep ther thumb. This is the sort of straightforward practice you have to follow. If you have endurand put up a persistent fight until they're all burned away, then there's no other victory which ca anywhere near, no other victory which is anywhere near a match for victory over the cravin defilements in your own heart. This is why the Buddha taught us to put the heat on the de all our activities--sitting, standing, walking and lying down. If we don't do this, they'll burn all our activities.... If you consider things carefully, you'll see that the Buddha's teachings are exactly right, both in how they tell us to examine the diseases of defilement, and in how to let go, destroy and extinguish defilement. All the steps are there, so we needn't go stu

else. Every point in his doctrine and discipline shows us the way, so we needn't wonder ho
about examining and doing away with these diseases. This becomes mysterious and hard
you study his teachings without making reference to doing away with your own defilements
like to talk about their own defilements, so they end up completely ignorant. They grow old
without knowing a thing about their own defilements at all. When we start to practice, when
comprehend how the defilements burn our own hearts, that's when we gradually come to k
understand suffering and defilement and learn how to extinguish defilement gives us space

need to use both hands to keep both hands washed and clean. Thus wherever there is vir
have discernment. Wherever there is discernment, you have to have virtue. Discernmen
you to know; virtue is what enables you to let go, to relinquish, to destroy your addictions.
just a matter of the five or eight precepts, you know. It has to be deal with the finest detai
Whatever your discernment sees as a cause of suffering, you have to stop, to let go. Vir
something which gets very subtle and precise. Letting go, giving up, renouncing, abstainin
and destroying: All of these things are an affair of virtue. This is why virtue and discernm
to go together, just as our right and left hands have to help each other. They help each oth
defilement. That's when your mind will be able to become centered, to be bright and clea
things show their benefits right at the mind. If we don't have these tools, it's as if we had no
feet: We wouldn't be able to get anywhere at all. We have to use our tools--virtue and dis
destroy defilement. That's when our minds will benefit.... This is why the Buddha taught
training in virtue, concentration and discernment. We have to keep fit in training these thi
don't keep up the training as we should, our tools for extinguishing suffering and defilemen
sharp, won't be of much use. They won't be a match for the defilements. The defilements
powers for burning our mind in the twinkling of an eye. Say that mind is quiet and neutral:
sensory contact can set things burning in an instant by making us pleased or displeased.
Sensory contact is our measuring stick for seeing how firm or weak our mindfulness is. Mo
stirs things up. As soon as there's contact by way of the ear or eye, the defilements are ve
When this is the case, how can we keep things under control? How are we going to gain c
eyes? How are be going to gain control over our ears, our nose, our tongue, our body and
we get mindfulness and discernment in charge of these things? This is a matter of practice
simple...our own affair, something by which we can test ourselves, to see why defilements
quickly when sensory contact takes place. Say, for instance, that we hear someone critic

else. We can listen and not get upset. But say that the thought occurs to us, "They're act
criticizing me." As soon as we concoct up this "me", we're immediately angry and displeas
concoct very much of this "me", we can get very angry. Just this fact should enable us to
as soon as our "self" gets involved, we suffer immediately. This is how it happens. If no se
comes out to get involved, we can remain calm and indifferent. When they criticize other
stay indifferent, but as soon as we conclude that they're criticizing us, our "self" appears an
immediately gets involved--and we immediately burn with defilement. Why? You have to
attention to this. As soon as your "self" arises, suffering arises in the very same instant. T
holds true even if you're just thinking. The "self" you think up spreads out into all sorts of
The minds gets scattered all over the place with defilement, craving and attachments. It ha
mindfulness and discernment watching over it, so it gets dragged all over the place by defi
craving. And yet we don't realize it. We think we're just fine. Is there anyone among us
realizes that this is what's happening? We're too weighted down, weighted down with our
matter how much the mind is smothered in the defilement of delusion, we don't realize it,
us deaf and blind.... There are no physical tools you can use to detect or cure this disease
defilement, because it arises only at sensory contact. There's no substance to it. It's like a
matchbox. As long as the match doesn't come into contact with the friction strip on the side
box, it won't give rise to fire. But as soon as we strike it against the side of the box, it burst
flame. If it goes out right then, all that gets burned is the matchhead. If it doesn't stop at
matchhead, it'll burn the matchstick. If it doesn't stop with the matchstick, and meets up wit
flammable, it can grow into an enormous fire. When defilement arises in the mind, it start
slightest contact. If we can be quick to put it out right there, it's like striking a match which
flares up--chae-- for an instant and then dies down right in the matchhead. The defilement
there. But if we don't put it out the instant it arises, and let it start concocting issues, it's li
pouring fuel into a fire. We have to observe the diseases of defilement in our own m
what their symptoms are, why they are so quick to flare up. They can't stand to be distur
minute you disturb them, they flare up into flame. When this is the case, what can we do t
ourselves beforehand? How can we stock up on mindfulness before sensory contact strike
to stock up is to practice meditation, as when we keep the breath in mind. This is what get
mindfulness prepared, so that we can keep ahead of defilement, so that we can keep it fro
long as we have our theme of meditation as an inner shelter for the mind. The mind's ou
the body, which is composed of physical elements, but its inner shelter is the theme of med
to train its mindfulness to be focused and aware. Whatever theme we use, that's the inne
the mind which keeps it from wandering around, concocting thoughts and imaginings. This
theme of meditation. Don't let the mind chase after its preoccupations the way ordinary pe
meditate do. Once we have a meditation theme to catch this monkey of a mind so that day
becomes less and less willful, it will gradually calm down, calm down until it can stand firm
short periods, depending on how much we train and observe ourselves. Now, as for how

meditation: The texts say to breathe in long and out long--heavy or light--and then in short
short, again heavy or light. Those are the first steps of the training. After that we don't ha
focus on the length of the in-breath or out-breath. Instead, we simply gather our awarenes
point of the breath, and keep this up until the mind settles down and is still. When the mi
you then focus on the stillness of the mind at the same time you're aware of the breath.
point you don't focus directly on the breath. You focus on the mind which is still and at nor
focus continuously on the normalcy of the mind at the same time you are aware of the brea
and out, without actually focusing on the breath. You simply stay with the mind, but you w
each in-and-out breath. Usually when you are doing physical work and your mind is at no
know what you're doing, so why can't you be aware of the breath? After all, it's part of the
Some of you are new at this, which is why you don't know how you can focus on the mind a
each in-and-out breath without focusing directly on the breath itself. What we're doing here
practicing how to be aware of the body and mind, pure and simple, in and of themselves...
by focusing on the breath for about 5, 10 or 20 minutes. Breathe in long and out long, or in
short. At the same time, notice the stages in how the mind feels, how it begins to settle d
have mindfulness watching over the breath. You've got to make a point of observing this, b
you breathe out of habit, with your attention far away. You don't focus on the breath, you'
really aware of it. This leads you to think that it's hard to stay focused there, but actually it'
easy. After all, the breath comes in and out on its own, by its very nature. There's nothin
difficult about breathing. It's not like other themes of meditation. For instance, if you're goi
practice recollection of the Buddha, or buddho, you have to keep on repeating buddho, b
Actually, if you want, you can repeat buddho in the mind with each in-and-out breath, bu
very beginning stages. You repeat buddho to keep the mind from concocting thoughts ab
Simply by keeping up this repetition you can weaken the mind's tendency to stray, for the
only one object at a time. This is something you have to observe. The repetition is to prev
mind from thinking up thoughts and clambering after them. After you've kept up the repet
don't have to count the number of times--the mind will settle down to be aware of the breat
in-and-out breath. It will begin to be still, neutral and at normalcy. This is when you focu
the mind instead of the breath. Let go of the breath and focus on the mind--but still be awa
breath on the side. You don't have to make note of how long or short the breath is. Make
mind which stays at normalcy with each in-and-out breath. Remember this carefully so tha
into practice. The posture: For focusing on the breath, sitting is a better posture than sta
walking or lying down, because the sensations that come with the other postures often ove
sensations of the breath. Walking jolts the body around too much, standing for a long time
tired, and if the mind settles down when you're lying down, you tend to fall asleep. With sit
possible to stay in one position and keep the mind firmly settled for a long time. You can
subtleties of the breath and the mind naturally and automatically. Here I'd like to conden
steps of breath meditation to show how all four of the tetrads mentioned in the texts can be

once. In other words, is it possible to focus on the body, feelings, the mind and the Dham
sitting? This is an important question for all of us. You could, if you wanted to, precisely fo
all the steps in the texts so as to develop strong powers of mental absorption (jhana), but i
of time. It's not appropriate for those of us who are old and have only a little time left. W
need is a way of gathering our awareness at the breath long enough to make the mind firm
straight to examining how all formations are inconstant, stressful and not-self, so that we ca
truth of all formations with each in-and-out breath. If you can keep at this continually, witho
your mindfulness will become firm and snug enough for you to give rise to the discernment
enable you to gain clear knowledge and vision. So what follow are the steps in practicing a
form of breath meditation....Give them a try until you find they give rise to knowledge of y
within you. You're sure to give rise to knowledge of your very own. The first thing wh
are going to meditate on the breath is to sit straight and keep your mindfulness firm. Breat
Breathe out. Make the breath feel open and at ease. Don't tense your hands, your feet, o
joints at all. You have to keep your body in a posture that feels appropriate to your breathi
beginning, breathe in long and out long, fairly heavily, and gradually the breath will
shorten--sometimes heavy and sometimes light. Then breathe in short and out short for ab
minutes, and then change. After a while, when you stay focused mindfully on it, the breath
gradually change. Watch it change for as many minutes as you like, then be aware of the
of its subtle sensations. This is the third step, the third step of the first tetrad:
sabba-kaya-patisamvedi--focusing on how the breath affects the whole body by watching a
sensations in all the various parts of the body, and in particular the sensations related to th
breath. From there you focus on the sensation of the breath at any one point. When yo
right, and for a fairly long while, the body--the breath--will gradually grow still. The mind wi
calm. In other words, the breath grows still together with the awareness of the breath. W
subtleties of the breath grow still, at the same time that your undistracted awareness settle
breath grows even more still. All the sensations in the body gradually grow more and mo
is the fourth step, the stilling of bodily formations. As soon as this happens, you begin to
aware of the feelings which arise with the stilling of the body and mind. Whether they are
pleasure or rapture or whatever, they will appear clearly enough for you to contemplate the
stages through which you have already passed--watching the breath come in and out, long
enough to make you realize--even though you may not have focused on the idea--that the
inconstant. It's continually changing, from in long and out long to in short and out short, fro
light and so forth. This should enable you to read the breath, to understand that there's n
constant to it at all. It changes on its own from one moment to the next. Once you have r
inconstancy of the body, i.e of the breath, you'll be able to see the subtle sensations of plea
pain in the realm of feeling. So now you watch feelings, right there in the same place whe
been focusing on the breath. Even though they are feelings which arise from the stillness o
mind, they are nevertheless inconstant even in that stillness. They can change. So thes

sensations in the realm of feeling exhibit inconstancy in and of themselves, just like the bre
When you see change in the body, change in feelings and change in the mind,this is called
Dhamma, i.e. seeing inconstancy. You have to understand this correctly. Practicing the fir
breath meditation contains all four tetrads of breath meditation. In other words, you see the
of the body, and then contemplate feeling. You see the inconstancy of feeling, and then co
mind. The mind, too, is inconstant. This inconstancy of the mind is the Dhamma. To see
see this inconstancy. When you see the true nature of all inconstant things, then keep trac
inconstancy at all times, with every in-and-out breath. Keep this up in all your activities to s
happens next. What happens next is dispassion. Letting go. This is something you hav
yourself. This is what condensed breath meditation is like. I call it condensed because it
all the steps all at once. You don't have to do one step at a time. Simply focus at one poin
the body, and you'll see the inconstancy of the body. When you see the inconstancy of th
have to see feeling. Feeling will have to show its inconstancy. The mind's sensitivity to fee
its thoughts and imaginings, are also inconstant. All of these things keep on changing. Thi
know inconstancy.... If you can become skilled at looking and knowing in this way, you'll
with the inconstancy, stressfulness and not-selfness of your "self", and you'll meet with the
Dhamma. The Dhamma which is constantly changing like a burning fire, burning with incon
and not-selfness, is the Dhamma of the impermanence of all formations. But further in, in t
the property of consciousness, is something special, beyond the reach of any kind of fire.
is no suffering or stress of any kind at all. This thing which lies "inside": You could say tha
within the mind, but it isn't really in the mind. It's simply that the contact is there at the mi
There's no way that you can really describe it. Only the extinguishing of all defilement will
know it for yourself. This "something special" within exists by its very nature, but defilem
have it surrounded on all sides. All these counterfeit things--the defilements--keep getting
and take possession of everything, so that this special nature remains imprisoned inside a
Actually, there is nothing in the dimension of time which can be compared with it. There's
which you can label it, but it is something which you can pierce through to see--i.e. by pie
through defilement, craving and attachment into the state of mind which is pure, bright and
is the only thing that's important. But it doesn't have only one level. There are many leve
the outer bark to the inner bark and on to the sapwood before you reach the heartwood.
Dhamma is like the heartwood, but there's a lot to the mind which isn't heartwood: The roo
and leaves of the tree are more than many, but there's only a little heartwood. The parts
heartwood will gradually decay and disintegrate, but the heartwood doesn't decay. That's
comparison we can make. It's like a tree which dies standing. The leaves fall away, the br
away, the bark and sapwood rot away, leaving nothing but the true heartwood. That's one
can make with this thing we call deathless, this property which has no birth, no death, no c
can also call it nibbana or the Unconditioned. It's all the same thing. Now, then. Isn't t
something worth trying to break through to see?...

SUMMARY

In the Pali Canon the Buddha often compares himself to the lion, the king of beasts, and one of the epithets the Buddhist tradition ascribes to him is Sakyasiha, the lion of the Sakyan clan. The Buddha describes his proclamation of the Dhamma as his "lion's roar," a designation the commentaries say implies the qualities of supremacy, fearlessness, and unchallengeableness.

The Majjhima Nikaya, the Collection of Middle Length Discourses, contains two suttas which bear this metaphor in their title. The Shorter Discourse on the Lion's Roar (MN 11) deals with the delicate question of whether different spiritual paths all lead to the same ultimate goal. If not, the question arises of defining the critical line that distinguishes them, and it is this question that the Buddha attempts to answer in this sutta. The Great Discourse on the Lion's Roar is a text of awesome scope and power in which the Buddha discloses the greatness and loftiness of his own spiritual endowments. Spoken as a rebuttal to the charges of a renegade disciple, the sutta has had such a powerful impact that in ancient times it was also known as "The Hair-Raising Discourse."

The two suttas were originally translated by the eminent English scholar-monk, Bhikkhu Nanamoli, in his draft translation of the entire Majjhima Nikaya. The translations have been edited and revised by Bhikkhu Bodhi, who has also provided introductions and notes.

EDITOR'S NOTE

The original translations of the two suttas included in this booklet were made by Ven. Bhikkhu Nanamoli. They are taken from his complete translation of the Majjhima Nikaya, which I have edited and revised for publication by Wisdom Publications, Boston (forthcoming, 1994/95). The numbers enclosed in square brackets are the page numbers of the Pali Text Society edition of the Pali text.

The introductions and notes are my own. In these the following abbreviations are employed:

DN Digha Nikaya
MN Majjhima Nikaya
Vbh. Vibhanga
Comy. Commentary

Bhikkhu Bodhi

GNU GENERAL PUBLIC LICENSE
Version 2, June 1991

Copyright (C) 1989, 1991 Free Software Foundation, Inc.
675 Mass Ave, Cambridge, MA 02139, USA
Everyone is permitted to copy and distribute verbatim copies
of this license document, but changing it is not allowed.

Preamble

The licenses for most software are designed to take away your freedom to share and change it. By contrast, the GNU General Public License is intended to guarantee your freedom to share and change free software--to make sure the software is free for all its users. This General Public License applies to most of the Free Software Foundation's software and to any other program whose authors commit to using it. (Some other Free Software Foundation software is covered by the GNU Library General Public License instead.) You can apply it to your programs, too.

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish), that you receive source code or can get it if you want it, that you can change the software or use pieces of it in new free programs; and that you know you can do these things.

To protect your rights, we need to make restrictions that forbid anyone to deny you these rights or to ask you to surrender the rights. These restrictions translate to certain responsibilities for you if you distribute copies of the software, or if you modify it.

For example, if you distribute copies of such a program, whether gratis or for a fee, you must give the recipients all the rights that you have. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights.

We protect your rights with two steps: (1) copyright the software, and (2) offer you this license which gives you legal permission to copy, distribute and/or modify the software.

Also, for each author's protection and ours, we want to make certain that everyone understands that there is no warranty for this free software. If the software is modified by someone else and passed on, we want its recipients to know that what they have is not the original, so that any problems introduced by others will not reflect on the original authors' reputations.

Finally, any free program is threatened constantly by software patents. We wish to avoid the danger that redistributors of a free program will individually obtain patent licenses, in effect making the program proprietary. To prevent this, we have made it clear that any patent must be licensed for everyone's free use or not licensed at all.

The precise terms and conditions for copying, distribution and modification follow.

GNU GENERAL PUBLIC LICENSE
TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License applies to any program or other work which contains a notice placed by the copyright holder saying it may be distributed under the terms of this General Public License. The "Program", below, refers to any such program or work, and a "work based on the Program" means either the Program or any derivative work under copyright law: that is to say, a work containing the Program or a portion of it, either verbatim or with modifications and/or translated into another language. (Hereinafter, translation is included without limitation in the term "modification".) Each licensee is addressed as "you".

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running the Program is not restricted, and the output from the Program is covered only if its contents constitute a work based on the Program (independent of having been made by running the Program).

Whether that is true depends on what the Program does.

1. You may copy and distribute verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and give any other recipients of the Program a copy of this License along with the Program.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Program or any portion of it, thus forming a work based on the Program, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

a) You must cause the modified files to carry prominent notices stating that you changed the files and the date of any change.

b) You must cause any work that you distribute or publish, that in whole or in part contains or is derived from the Program or any part thereof, to be licensed as a whole at no charge to all third parties under the terms of this License.

c) If the modified program normally reads commands interactively when run, you must cause it, when started running for such interactive use in the most ordinary way, to print or display an announcement including an appropriate copyright notice and a notice that there is no warranty (or else, saying that you provide a warranty) and that users may redistribute the program under these conditions, and telling the user how to view a copy of this License. (Exception: if the Program itself is interactive but does not normally print such an announcement, your work based on the Program is not required to print an announcement.)

These requirements apply to the modified work as a whole. If

identifiable sections of that work are not derived from the Program, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Program, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Program.

In addition, mere aggregation of another work not based on the Program with the Program (or with a work based on the Program) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

3. You may copy and distribute the Program (or a work based on it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you also do one of the following:

a) Accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

b) Accompany it with a written offer, valid for at least three years, to give any third party, for a charge no more than your cost of physically performing source distribution, a complete machine-readable copy of the corresponding source code, to be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

c) Accompany it with the information you received as to the offer to distribute corresponding source code. (This alternative is allowed only for noncommercial distribution and only if you received the program in object code or executable form with such

an offer, in accord with Subsection b above.)

The source code for a work means the preferred form of the work for making modifications to it. For an executable work, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the executable. However, as a special exception, the source code distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

If distribution of executable or object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place counts as distribution of the source code, even though third parties are not compelled to copy the source along with the object code.

4. You may not copy, modify, sublicense, or distribute the Program except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense or distribute the Program is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

5. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Program or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Program (or any work based on the Program), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Program or works based on it.

6. Each time you redistribute the Program (or any work based on the Program), the recipient automatically receives a license from the

original licensor to copy, distribute or modify the Program subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties to this License.

7. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Program at all. For example, if a patent license would not permit royalty-free redistribution of the Program by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Program.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system, which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

8. If the distribution and/or use of the Program is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Program under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.

9. The Free Software Foundation may publish revised and/or new versions of the General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of this License, you may choose any version ever published by the Free Software Foundation.

10. If you wish to incorporate parts of the Program into other free programs whose distribution conditions are different, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

NO WARRANTY

11. BECAUSE THE PROGRAM IS LICENSED FREE OF CHARGE, THERE IS NO WARR
FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT W
OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PART
PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPR
OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF
MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK
TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD T

PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERV
REPAIR OR CORRECTION.

12. IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRIT
WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR
REDISTRIBUTE THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAM
INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES A
OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMIT
TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINE
YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY
PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF TH
POSSIBILITY OF SUCH DAMAGES.

END OF TERMS AND CONDITIONS

Appendix: How to Apply These Terms to Your New Programs

If you develop a new program, and you want it to be of the greatest
possible use to the public, the best way to achieve this is to make it
free software which everyone can redistribute and change under these terms.

To do so, attach the following notices to the program. It is safest
to attach them to the start of each source file to most effectively
convey the exclusion of warranty; and each file should have at least
the "copyright" line and a pointer to where the full notice is found.

<one line to give the program's name and a brief idea of what it does.>
Copyright (C) 19yy <name of author>

This program is free software; you can redistribute it and/or modify
it under the terms of the GNU General Public License as published by
the Free Software Foundation; either version 2 of the License, or
(at your option) any later version.

This program is distributed in the hope that it will be useful,
but WITHOUT ANY WARRANTY; without even the implied warranty of
MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the
GNU General Public License for more details.

You should have received a copy of the GNU General Public License along with this program; if not, write to the Free Software Foundation, Inc., 675 Mass Ave, Cambridge, MA 02139, USA.

Also add information on how to contact you by electronic and paper mail.

If the program is interactive, make it output a short notice like this when it starts in an interactive mode:

Gnomovision version 69, Copyright (C) 19yy name of author
Gnomovision comes with ABSOLUTELY NO WARRANTY; for details type `show w'.
This is free software, and you are welcome to redistribute it
under certain conditions; type `show c' for details.

The hypothetical commands `show w' and `show c' should show the appropriate parts of the General Public License. Of course, the commands you use may be called something other than `show w' and `show c'; they could even be mouse-clicks or menu items--whatever suits your program.

You should also get your employer (if you work as a programmer) or your school, if any, to sign a "copyright disclaimer" for the program, if necessary. Here is a sample; alter the names:

Yoyodyne, Inc., hereby disclaims all copyright interest in the program
`Gnomovision' (which makes passes at compilers) written by James Hacker.

<signature of Ty Coon>, 1 April 1989
Ty Coon, President of Vice

This General Public License does not permit incorporating your program into proprietary programs. If your program is a subroutine library, you may consider it more useful to permit linking proprietary applications with the library. If this is what you want to do, use the GNU Library General Public License instead of this License.

ÉÍÍÍ

Buddha-dharma. Rather, I felt somewhat disturbed by what I see as a growing confusion about the nature of Buddhist teachings and a willingness to distort and dilute these teachings, apparently in order to make Buddhist meditation more saleable in our contemporary spiritual marketplace.

In this paper I wish to discuss the issues I feel are raised by these three books in particular, seeing them as representative of a wider movement. At this point I wish to declare my own interest in this discussion. I have practised Buddhist meditation for 20 years, since 1984 in the tradition of the late Mahasi Sayadaw of Burma, principally under the guidance of Sayadaw U Pandita Bhivamsa (of Mahasi Sasana Yeiktha and recently of Panditarama Yeiktha) and Sayadaw U Janaka Bhivamsa (of Chanmyay Yeiktha). I have had very little exposure to the American vipassana tradition, although I do have some experience of American Zen, gained through two years of practice with the Diamond Sangha in Hawaii. Nor have I had any exposure to Western psychotherapy. So I speak as one ignorant of psychotherapeutic practice but with a great deal of respect for the traditions of Theravada Buddhism, and rush in to judgement in a situation where I am, at best, familiar with only half the territory.

Eastern meditation and Western psychotherapy

In A path with heart, Jack Kornfield raises the issue of the relationship between traditional Buddhist meditation and Western psychotherapy. Buddhism has always been an extremely adaptable religion, and it demonstrates a protean ability to adjust itself to new cultures. Buddhism tends to take existing elements of a new host culture and "buddhise" them, using them as vehicles for its fundamental insights. But cultural adaptation is a

two-way process, and Buddhism is itself transformed as it moves from one culture to another. We are living through a period in which Asian forms of Buddhism are adapting themselves to the culture of the contemporary West, and Jack Kornfield sees Western psychology as that aspect of Western culture which is providing the most significant impact on Buddhism (244). His words are echoed by Mark Epstein in Thoughts without a thinker, who compares our situation to that encountered by Buddhists when Indian Buddhism came to China. Indian Buddhism was translated into Taoist terms by the Chinese, and this process of "sinification" changed Indian Buddhism into Chinese Buddhism. Today, Epstein says, as Asian forms of Buddhism are being transformed into Western Buddhism by the same process of translation, it is the language of psychoanalysis that is providing the vehicle for the Buddha's insights to be presented to the West (7).

Suffering East and West

To what extent can psychotherapy shed light on Buddhist teachings? Let us begin by examining how the therapists understand the first of the Four Noble Truths, that of suffering. It is axiomatic to all Buddhist traditions that people begin meditation because of their discovery of the First Noble Truth: that of dukkha, suffering or unsatisfactoriness. The Buddha taught that all experience is fundamentally unsatisfactory, whether it be gross forms of physical pain and mental anguish, or the experiences of pleasure, success and fulfilment that we would normally regard as pleasurable or even blissful. In brief, why do we begin meditation practice? Because we are in pain, and we know we are in pain. Kornfield approaches the question of the relationship between meditation and psychotherapy by arguing that there is a very specific kind of suffering that

Westerners bring to meditation practice. He says:

> [S]piritual practice attracts a great many wounded people who are drawn to such practice for their own healing. Their numbers appear to be increasing. The spiritual impoverishment of modern culture and the number of children raised without a nurturing and supportive family is growing. Divorce, alcoholism, traumatic or unfortunate circumstances, painful child-rearing practices, latchkey children, and child-rearing by day care and television all can produce people who lack an inner sense of security and well-being. These children grow up to have adult bodies but still feel like impoverished children. Many such "adult children" live in our society. Their pain is reinforced by the isolation and denial of feelings that is common in our culture. (204)

Epstein echoes this concern. He argues that Westerners commonly suffer from what has been called the basic fault, a chronic spiritual hunger caused by inadequate childhood attention, neglect rather than abuse (173). Epstein goes on to say:

> From the Buddhist perspective, the closest parallel lies in the descriptions of the hungry ghost realm. Many Westerners require a combined approach of psychotherapy and meditation precisely because the hungry ghost realm is so strongly represented in their psyches. This is a phenomenon that is new to the recorded history of Buddhism: never before have there been so many Hungry Ghosts engaged in Buddhist practice. (174)

Kornfield and Epstein agree that the situation contemporary Western meditators face is unique. Kornfield calls people who suffer from this unique spiritual hunger "adult children," people who lack a healthy sense of self and who are spiritually crippled by the suffering they have undergone in childhood and their unconscious denial of this suffering (Kornfield: 217; & Epstein: 176-8).

Given that Western meditators are faced with culturally unique forms of suffering, it follows that these particular types of suffering are best dealt with by the techniques of Western psychotherapy which have been developed within this culture to deal with the problems specific to this culture. Kornfield says:

Psychotherapy addresses in directed and powerful ways the need for healing, the reclamation and creation of a healthy sense of self, the dissolution of fears and compartments, and the search for a creative, loving, and full way to live in the world. (245)

Having established that Westerners undergo unique forms of suffering that psychotherapy has developed techniques to handle, Kornfield goes on to argue that meditation alone is not enough to heal many of the deep issues we uncover in the course of our meditation (245). Meditation alone is not enough. He makes the extraordinary claim that at least half the students at the annual three month retreat at the Insight Meditation Society cannot do traditional Insight Meditation, "because they encounter so much unresolved grief, fear, and wounding and unfinished developmental business from the past" (246). He follows up this revelation with a number of stories relating how specific students were blocked in their meditation but successfully resolved these blockages once they were able to identify traumatic events or unsatisfactory or even abusive relationships in their past. He also narrates stories of spectacular failure in spiritual practice when these issues were neglected. Indeed, much of Kornfield's argument is based on case histories of meditational success and failure that all go to support his view of the limitations of traditional meditation without psychotherapy. While these stories are interesting and sometimes even instructional, the implications behind this view need to be teased out.

I was first struck by Kornfield's claim that at least half of the students who attempt to do traditional vipassana meditation at IMS cannot do so. This is an extraordinary admission of failure for any meditation teacher or meditation centre. In my experience as a practitioner and as a teacher - and I must admit to having a very limited experience as a teacher - I have only seen evidence of such a large failure rate among the students in circumstances where it was quite clear that the teachers were doing a very bad job. Nor have I seen any evidence that such failures are confined to specific ethnic or cultural groups. It is true that vipassana meditation is very difficult, and it is true that many students engaged in this practice spend significant, even long, periods of time stuck, not moving on through the stages of vipassana nana, or insight knowledge, as described in the traditional meditation literature. But I have never experienced a situation where anything like half the people who begin intensive meditation practice are psychologically incapable of getting started. If Kornfield's claim is true, something very strange is going on in the world of vipassana meditation teaching.

Another aspect of this claim that struck me was the sense of specialness that underlies it; the sense that we as Westerners with a capital "W" are unique, special, not at all like those far-off foreign Easterners with a capital "E." Indeed, in my work as a student and teacher of Buddhist studies at a modern Western (with a capital "W") university, I feel an instant warning signal whenever someone starts throwing around labels like capital-W "Western" and capital-E "Eastern," and basing arguments on this level of generalisation. This is a habit much loved by first year undergraduates, but I point out to them that any argument based on this level of generalisation will almost invariably be shot down in

flames once it is examined seriously.

This kind of argument requires a strong polarisation between two opposite but supporting extremes. Any attempt to exalt one group as uniquely embodying some specific trait or set of traits requires a strong sense of the "Other," some other group that embodies the opposing traits. Perhaps one of the most extreme examples of this in Western culture was seen in Nazi Germany, where Hitler's idealisation of the Aryan Germans required the invention of an opposite pole of demonised Jews. In the case of Kornfield's argument, if we are to hold up Western culture as uniquely diseased we need an opposite pole, a utopian Other culture where people are uniquely healthy. Apart from a story of how well his daughter was treated by her Balinese dance teachers, Kornfield makes only one attempt to present this elusive Other when he says:
In the best of traditional cultures, where people are embraced and nourished on both the physical and spiritual levels, they grow up with a sense of ample inner and outer resources. (217)

Unfortunately, Kornfield does not tell us which cultures these are. Are they still around? Where are they? Or is he speaking historically, of cultures which once existed but do so no longer?

Demonising one type of culture and idealising another saves us from facing the unpleasant fact that suffering is universal, that the members of every society suffer in every conceivable way. Does Kornfield expect us to believe that child abuse and neglect are unique to North America? Let's consider what we know of ancient India in the time of the Buddha. Like all highly developed traditional societies, India had a large slave population. A considerable proportion of the population were born, grew up and died knowing that they did not

even own their own bodies. Practices that we would condemn as abhorrent forms of sexual abuse were so routine in such societies that they were not even worthy of comment. Can we be confident these slaves enjoyed healthy child rearing practices? Consider women in traditional India. Does Kornfield really think that women who were the chattels of their male relatives from birth to death, who had little or no control over their lives unless they escaped into the sangha, that these women were endowed with inner and outer resources uniquely missing in the contemporary West? And apart from considering slaves and women (who together made up the majority of the population), where was the quality of childhood in a society where the vast majority of people, slave or free, male or female, were set to work at the earliest possible age? Where was the sense of inner security in a society where the lives of the great majority of the population consisted of endless drudgery accompanied by endless insecurity, the insecurity which came from the certain knowledge that the question of whether they would be able to eat into the following year was entirely determined by the quality of the next harvest?

Let's forget societies in the past. Anyone who has practised meditation in Burma agrees that the Burmese give every appearance of being extremely successful at intensive meditation practice. Is Kornfield seriously suggesting that the Californian middle and upper classes suffer more than the Burmese living under the tender mercies of one of the most violently repressive regimes on the planet? Any such suggestion is obviously bizarre in the extreme - which may be why he couches the existence of the Other in such vague terms.

Meditation and the Four Noble Truths

Let's look deeper into this claim. I have already mentioned how the First Noble Truth provides the starting point for Buddhist practice. The Four Noble Truths provide the fundamental framework for all Buddhist traditions, to the extent that any spiritual teaching that fits within this framework can be legitimately regarded as Buddhist, regardless of any cultural peculiarities, and any spiritual teaching which does not fit within this framework can not be legitimately regarded as Buddhist. The Four Noble Truths are: dukkha; the arising of dukkha; the cessation of dukkha; and the way that leads to the cessation of dukkha. The Buddha made the outrageous claim that his way of practice - the Noble Eightfold Path - leads to the complete cessation of suffering. This claim is based on these four truths, and these truths are universal because they are concerned with the structure of experience, not the content of experience.

The key to understanding what the Buddha is getting at is seeing how the four truths hang together. All experience has a beginning; all experience has an end. All experience arises and ceases (the second and third truths). This arising and ceasing is structural; it is irrelevant which kind of experience we are talking about, be it pleasant or painful, physical or mental, Eastern or Western. Further, experiences arise and cease because of causes. They do not arise and cease randomly, but because of specific causes which can be discovered in the course of vipassana meditation. The fact that all experience arises and ceases makes experience itself fundamentally unsatisfactory (the first truth). It follows from the fact that all experience ceases because of specific causes, that if we discover those causes and allow them to manifest, we can discover the way to bring painful experience to an end (the fourth truth). The Four Noble Truths hang together. Hence the Buddha said: The one who sees dukkha sees also the arising of dukkha,

sees also the cessation of dukkha, and sees also the way leading to the cessation of dukkha. (S5.437)

What Kornfield is implying is that the way that leads to the cessation of dukkha does not work for certain types of suffering. There are certain specific types of suffering which are immune to the path. But the path is not concerned with specific types of suffering, or specific types of experience, but simply with the fact that all suffering, of whatever type, arises and ceases. Because all suffering, of whatever type, arises and ceases, then all suffering can be brought to this point of cessation, and the bringing of suffering to this point of cessation is the practice of the path.

Because the path is concerned with the underlying, universal structures of experience, if it is true that some types of experience are immune to the treatment provided by the path, then all experience must be immune to the path. If it is true that vipassana meditation does not work for some types of suffering, then it does not work for any type of suffering. And if vipassana meditation does not work, then there is no Third Noble Truth - no path that leads to the cessation of suffering. And since the Four Noble Truths hang together, if one truth is denied, all are denied, and Buddhism has just disappeared out the window.

However, it may be objected at this point that my analysis is going too far. Is Kornfield really denying the Four Noble Truths? Or is he simply saying that some people need extra help to enable them to seriously engage vipassana meditation? In other words, is he simply suggesting that psychotherapy can play an effective supporting role in traditional meditation practice? To examine this question, we must examine how Kornfield treats Buddhism in his book, A path with heart.

The Great Way

Throughout the course of his book, Kornfield presents a view of the Buddha and his teachings which is based on a particular concept of the role of spiritual traditions, a concept which we might loosely describe as universalist liberal. He introduces this view early in the book, for example when he compares spiritual practice to a journey up a mountain, and warns us that "it is crucial to understand that there are many ways up the mountain - that there is never just one true way" (32). He sees the various traditions as providing maps which guide the seeker up the mountain. Different traditions map different paths, and all paths are equally valid, all may be useful to the earnest seeker.

Kornfield was trained primarily in the vipassana meditation of Theravada Buddhism, and we can see how he applies his universalist liberal attitude to this tradition. In Theravada we find a literary genre of path manuals, teachings which describe the path of vipassana meditation from the beginning to the end. Probably the best known and elaborate of these is contained in the Visuddhimagga, a medieval text written in the 5th century by Acariya Buddhaghosa. Here we find an elaborate scheme of the path analysed in terms of 16 nanas, or knowledges, and Kornfield devotes part of Chapter 10 to presenting it to his readers. However, he introduces his account with a warning:

The map of the Elders is used in Insight Meditation. As you read about it in detail, keep in mind that such maps are both helpful and limiting. Depending on the form of practice used and the individual, meditation can progress in quite different ways. Mystical texts outside of Buddhism also describe the process of awakening, in

hundreds of other languages and landscapes, although they all share common elements. So I offer this map with some caution, as an example of promises and perils we may encounter on our spiritual journey. (137)

Note the warning to the unwary reader. Maps are helpful, but they are apparently dangerous (otherwise why the need for caution?) because they are limiting. But what is being limited? Earlier in his book, Kornfield introduces the notion of the "Great Way," of which any given teaching or practice is simply one part (for example, 121). Buddhism in general, and Theravada Buddhism in particular, is merely one aspect of this Great Way. While the Great Way does seem very attractive in the hands of a skilful writer like Jack Kornfield, it has one fundamental problem: it doesn't actually exist; or rather, it exists only in Kornfield's imagination. When I say that it doesn't actually exist, I mean that there is no living Buddhist tradition found on the planet which manifests as the Great Way described by Kornfield.

This raises the issue of what exactly do we mean when we use the word "Buddhism." You may remember the scandal which broke out after Pope John Paul II published a book called Crossing the threshold of hope, in which he explained his world view, including his view of other religions. He devoted a chapter to Buddhism in which he described it as an atheistic system which aims to make its devotees perfectly indifferent to the world around them (86). This description of Buddhism caused a great deal of offence to Buddhists around the world, because they saw it as blatant propaganda designed to discredit their religion. The problem with John Paul's description of Buddhism, the factor that made it propaganda rather than genuine analysis, was that no Buddhist could recognise his or her Buddhist tradition in John Paul's words. This was a Buddhism which existed only in John

Paul's imagination, and therefore this was a Buddhism which simply did not exist at all.

The same is true of Jack Kornfield's Great Way. This Great Way can not be found in any specific Buddhist or Hindu or Sufi or Christian or other school or tradition, but is an abstract entity which somehow floats above and encompasses every tradition. In the name of this non-existent Great Way, Kornfield takes bits and pieces from every tradition and mixes them up into a kind of Great Way Soup. For example, he occasionally quotes the Buddha, using him as an authority to justify one or another teaching. However, if one is actually acquainted with the Buddhist scriptures he is drawing upon, it soon becomes evident that when Kornfield says, "The Buddha once said ... ," what he really means is, "This is what the Buddha would have said, had he been a psychotherapist living in late 20th century California."

Throughout his book, Kornfield cheerfully changes Buddhist teachings in order to make them fit into his scheme. We can find a number of cases when he supposedly quotes the Buddha or explains some traditional teaching where he makes some slight change, some subtle adaptation, which in isolation may seem trivial to the casual reader, but in total create a cumulative effect in which Buddhist teachings are distorted to give a false impression of traditional support for the position Kornfield is taking. To give just one example, he quotes the Buddha as saying:

Just as the great oceans have but one taste, the taste of salt, so too there is but one taste fundamental to all true teachings of the Way, and this is the taste of freedom. (76)

This sounds very nice and very liberal. However, the passage should read something like: "Just as the great

ocean has but one taste, the taste of salt, so this dhamma has but one taste, the taste of freedom." What's the difference? Kornfield skilfully changes the passage to insert his key concept of the Tao, the Great Way, and present the Buddha as liberally accepting the validity of all ways of practice which correspond to the Great Way. The strong probability that the Buddha never heard of this Great Way, and the fact that it is nowhere mentioned in the scriptures Kornfield is purporting to expound, is not allowed to get in the way of a good story.

Linked with this notion of the Great Way is Kornfield's extensive use of the map metaphor. Spiritual traditions provide maps for practice, as outlined above. These traditions and their maps often contradict each other, and this creates a problem for the spiritual seeker. Kornfield tells a story about a married couple who practiced with Sufis, Christians and Tibetan Buddhists. At some point, the husband fell into a depression and committed suicide. Some weeks later his widow was comforted by a friend from her Buddhist community who assured her that her husband had been safely reborn in a pure land. This had been seen in meditation. Later, friends from her Sufi and Christian communities on different occasions also assured her that they too had seen her husband safely reborn in one or another circumstance - and all of these circumstances were different! She went to Kornfield for guidance, and he advised her "to put away all her philosophies and beliefs, the maps of past and future lives and more," and asked her: What is she convinced is true, regardless of what anyone else says? She replied: "I know that everything changes and not much more than that. Everything that is born dies, everything in life is in the process of change." Kornfield asked: Could that be enough?

Kornfield turns to his readers and argues on the basis of this case that we must maintain a sense of inquiry rather than seek to imitate the spiritual ideals provided by each tradition. We must not look beyond ourselves and our own experience (158-63).

I feel that the advice Kornfield gave to the widow was very good: As practitioners of meditation, we must learn to rely fundamentally on our own experience. However, what I find most interesting is not what he did tell her, but what he did not. What he did not say was: You are practicing in three different spiritual traditions, and have ended up being very confused. Are you surprised by this? If we set out on a journey into the unknown using three contradictory maps to show us the way, surely we are guaranteed confusion. If we want to develop clarity rather than confusion, at some time we have to decide: What am I? Am I a Buddhist? A Sufi? A Christian? And having decided, then go for it, and follow the map provided as far as it goes.

But instead of advising the practitioner to settle on one tradition, Kornfield advises her to settle for the lowest common denominator of all of them. At this point he brings in a distorted version of the Kalama-sutta to bolster his position, to give the entirely false impression that this advice is somehow in accordance with the Buddha's teachings. The Buddha's teachings are misused to support a position no Buddhist tradition would endorse - that we should use the practice as a means of avoiding commitment to the tradition, even if this means reducing our spiritual aspiration so we can remain comfortably within our limitations. The one thing that seems to be entirely off the agenda is to place one's faith on one tradition and to surrender totally to it.

What am I getting at here? The point I am trying to make

is that Kornfield is not merely suggesting that psychotherapeutic techniques be added to our practice of Buddhist meditation; he is inventing a whole new tradition, a new religion, the "Great Way" which embraces all that is good in all of the ancient wisdom traditions, and transcends all that is limited in each of them. As each tradition provides a specific map which guides the practice, it follows that Kornfield is teaching from the "Map of Maps," and so he becomes the ultimate spiritual authority. For if all traditions are relative except for the "Great Way" that embraces them all, and if Kornfield is our authority for this Great Way, then it follows that Kornfield is the master of every tradition. Even the Pope doesn't make this claim.

None of this, of course, is openly stated. It is simply hidden in the rhetoric, wrapped up in layers of inspirational writing which is designed to make its readers feel that they have somehow penetrated into the mysteries of all the mystic paths of the planet and that, by avoiding commitment to any specific tradition, they have demonstrated their superiority to all specific traditions, and to those deluded and bigoted people who stick to a single path.

Does enlightenment exist?

Let us return to the Four Noble Truths. Jack Kornfield's approach to the teaching has found supporters in other meditating psychotherapists. One of these is Jeffrey Rubin, author of Psychotherapy and Buddhism. Claiming Kornfield as an authority (89), Rubin moves the agenda forward by examining the claims made about Enlightenment by Theravada Buddhism. In a chapter titled "The emperor of enlightenment may have no clothes," Rubin says: "In this chapter, I shall challenge certain foundational assumptions of the Theravadin Buddhist conception of

Enlightenment" (83).

Rubin explains that enlightenment in Theravada Buddhism is described as completely purifying the mind of the defilements of greed, hatred and delusion. This ideal assumes that the mind can be permanently and completely purified and therefore transformed (83-4 & 87). However, Rubin points out that in 1983 "five of the six most esteemed Zen Buddhist masters in the United States" were involved in grossly unenlightened behaviour such as sexual exploitation and stealing money (88). The question arises: How can these scandals occur if these people are supposed to be enlightened? How can this have happened? Rubin concludes that these scandals suggest that:

... psychological conditioning from the past that inevitably warps personality cannot be completely eradicated and that there is no conflict-free stage of human life in which the mind is permanently purified of conflict. This is consistent with psychoanalytic insights about the essential nontransparency of the human mind; that is, the inevitability of unconsciousness and self-deception.

For an individual to be enlightened, they would have to be certain that they were completely awake without any trace of unconsciousness or delusion. Even if that existed in the present, it is not clear to me how one could know for certain that would never change in the future. From the psychoanalytic perspective, a static, conflict-free sphere - a psychological "safehouse" - beyond the vicissitudes of conflict and conditioning where mind is immune to various aspects of affective life such as self-interest, egocentricity, fear, lust, greed, and suffering is quixotic. Since conflict and suffering seem to be inevitable aspects of human life, the ideal of Enlightenment may be asymptotic, that is, an unreachable ideal (90).

From the context of the Four Noble Truths, Rubin has just torpedoed the third truth. He does this in an attempt to integrate Buddhism and psychotherapy, to create a new Buddhism more suited to Western culture. Unfortunately, Rubin is so confused about Buddhist teaching that he seems oblivious to the fact that he is not adapting or integrating Buddhism, he is simply destroying it. We referred earlier to the Buddha's teaching that to see one of the Noble Truths is to see all of them. These truths form a pattern which is so closely interwoven that to deny one of them is to deny all of them. If there is no cessation of dukkha, there is no path leading to the cessation of dukkha. And if there is no cessation of dukkha and no path leading to the cessation of dukkha, then the Buddha was a very confused fellow indeed. Since enlightenment is psychotherapeutically impossible, then the Buddha was not enlightened. In other words, there never was a Buddha. Rubin's version of Buddhism is a Buddha-less Buddhism. And a Buddha-less Buddhism is in the same position as a Christ-less Christianity - non-existent.
But is Rubin's analysis valid? Rubin began by saying he was examining the Theravada view of enlightenment. He then attempts to discredit this view by looking at the behaviour of a number of Zen teachers. However, by comparing the Theravada ideal of enlightenment with the representatives of a Mahayana school of Buddhism, he is committing the classic error of comparing apples with oranges. To begin with, we need to examine this notion of "enlightenment," which is a source of endless confusion to many Western writers, not just Rubin and Epstein.

I have never been able to find any Pali or Sanskrit word which corresponds to the English word "enlightenment." This word was selected some time late last century by English translators as a label for the goal of Buddhist

practice because of its resonance with the 18th century ideal of the Enlightenment. The European Enlightenment was a movement which idealised progress, science and reason - the "light" in "Enlightenment" refers to the light of reason. In Victorian Britain, sympathetic English scholars wanted to present Buddhism in as favourable a light as possible, and they did so by portraying the Buddha as the perfect Victorian gentleman. He was presented as rejecting the priestly mumbo-jumbo of the brahmins (who for the Victorian English corresponded to the Roman Catholic clergy) in favour of a religion of reason and morality (Almond: 70-4). The only thing that spoiled this picture was undeniable evidence in the Buddhist texts that the Buddha taught and practiced some kind of bizarre self-hypnosis or cultivation of trance states - what we today call meditation. The word "enlightenment" referred to a state of enlightened reason attained by the Buddha which, however, existed only in the imagination of Victorian scholars. Unfortunately the word has stuck, and with it the confusion.

The word buddha comes from the root budh, meaning wake, know. A buddha is one who is awake, one who knows. The state of knowing, of being awake, which is experienced by a buddha is bodhi, and bodhi can be reasonably translated as awakening. Soon after his awakening the Buddha himself described what he had discovered under the Bodhi Tree in this way:

This dhamma which I have discovered is deep, difficult to understand, difficult to awaken to, peaceful, exalted, beyond the scope of reason, subtle, to be experienced only by the wise. But this people finds pleasure in attachment, is intent on attachment, delights in attachment; and for a people that finds pleasure in attachment, is intent on attachment, delights in attachment, this state is difficult to

comprehend: that is, specific conditionality (idapaccayata), dependent arising (paticcasamuppada).

This state, also, is extremely difficult to see: that is, the calming of all formations, the surrender of all clinging, the destruction of craving, the fading of passion, cessation, nibbana. (Vin. 1: 4-5)

We can see that the Buddha divided his discovery into two aspects: specific conditionality/dependent arising, and nibbana. Dependent arising refers to the structure of experience - all experience. It is a restatement of the second and third of the Four Noble Truths, but seen from a different angle. Dependent arising is summed up in the following verse, found throughout the suttas:

When this is, that is;
From the arising of this, that arises.
When this is not, that is not;
From the cessation of this, that ceases. (S 2.28)

Dependent arising teaches that all experiences arise and cease dependent upon conditions other than themselves. Experience is inherently dynamic, an endless process of change without exception. Dependent arising expands the Noble Truths of the arising and ceasing of dukkha, by revealing the specific patterns of causality that give rise to either dukkha or the cessation of dukkha. Specific conditionality refers to the fact that any specific experience arises because of some other specific experience, and then ceases because of some other specific experience. Specific conditionality emphasises the orderliness of change, the fact that experiences do not arise randomly but in accordance with precise and observable patterns of causation. In the Mahatanhasankhaya-sutta, the Buddha examined his students on their meditation experience:

Bhikkhus, do you see: "This has come to be?" ... Do you see: "Its origination occurs with that as support?" ... Do you see: "With the cessation of that support, what has come to be is subject to cessation?" (M 1.260)

Notice the focus of the Buddha's questions. He is not just asking his students, "Do you see change?" He is asking, "Do you see the patterns of change? Do you see what supports what? Do you see what specific experience gives rise to what specific experience? And when that experience ceases, do you see what changes to make it cease?"

This perceived order in the flow of experience, the fact we can see that precisely this gives rise to precisely that, is specific conditionality. This is what makes our situation workable. The wisdom of the Buddha exposes the underlying structures of our experience, the underlying laws that govern change, and therefore shows us how we can develop our experience in a direction we want. This is what makes possible the path. The goal of practice, and the means of practice, is awakening (bodhi). What we awaken to is our experience, now. This experience, now, is the content of awakening. Note that awakening does not refer to any specific type of experience, be it painful or pleasurable, happy or sad, Eastern or Western. Awakening is simply the penetrating knowing of the structure of any experiences that are arising and ceasing, now.

The second aspect of the Buddha's dhamma is nibbana (in Sanskrit, nirvana). In Theravada Buddhism, nibbana refers to the paradoxical experience of the cessation of all experience, the shut-down of the phenomenal universe. It is this second aspect of the dhamma which permanently transforms the mind. We may, according to the Theravada teaching, spend any amount of time in the experience of bodhi, but not necessarily have

experienced nibbana; and the effects of the experience of bodhi are temporary, not permanent.

In this context we can see Rubin's error. Mahayana Buddhism sees its ideal as the attainment of bodhi, which it expresses as shunyata, or emptiness. The followers of the Mahayana are bodhisattvas, beings (sattva) who are inclined toward awakening (bodhi). A bodhisattva must renounce the experience of nirvana until her last life, when she has accumulated sufficient wisdom and compassion to attain full Buddhahood and become a sammasambuddha. The Zen teachers Rubin talks about follow a practice which is designed to give rise to this experience of emptiness. They are not following a practice which is designed to give rise to the experience of nirvana. Nothing which these Zen teachers say or do can tell us anything at all about the Theravada ideal of enlightenment, since we have no evidence that any of them have ever experienced it.

Rubin's confusion is due to his determination to mix up the different traditions of Buddhism into a homogenous stew which is neither Theravada nor Mahayana - which, like Kornfield's Great Way, does not correspond to any actual living Buddhist tradition found anywhere on the planet. But apart from being confused about enlightenment, Rubin is also engaging in some hermeneutical sleight-of-hand that needs to be examined.

Interpreting Buddhism

Let us review the journey we have been taking. We began with psychotherapists who practice Buddhist meditation undertaking the project of translating or interpreting Buddhism into terms that are culturally relevant to the contemporary West by using psychotherapy as a template. We have seen that in practice this means more than

merely asserting that psychotherapy can be used as an aid to traditional Buddhist meditation. Rather, it has involved, in the works of the therapists under discussion, a fundamental rewriting of Buddhism, the creation of an entirely new form of Buddhism which does not correspond to any of the existing Buddhist traditions, and which is designed to be compatible with the teachings of psychotherapy. At this point we need to take a look at the broader problem of interpretation or translation itself.

What is interpretation? To interpret means to read one myth in terms of another. In his provocatively titled We've had a hundred years of psychotherapy - and the world's getting worse, psychologist James Hillman spoke about the developmental model that Kornfield, Rubin and Epstein take for granted. In a conversation with journalist Michael Ventura, Hillman said:

The principal content of American psychology is developmental psychology: What happened to you earlier is the cause of what happened to you later. That's the basic theory: our history is our causality. ... So you have to go back to childhood to get at why you are the way you are. ... No other culture would do that. If you're out of your mind in another culture or quite disturbed or impotent or anorexic ... It could be thousands of other things - the plants, the water, the curses, the demons, the Gods, being out of touch with the Great Spirit. It would never, never be what happened to you with your mother and your father forty years ago. Only our culture uses that myth.

Ventura: ... That's not a myth, that's what happened!

Hillman: "That's not a myth, that's what happened." The moment we say something is "what happened" we're announcing, "This is the myth I no longer see as a myth.

This is the myth that I can't see through." "That's not a myth, that's what happened" suggests that myths are the things we don't believe. The myths we believe and are in the middle of, we call the "fact," "reality," "science." (17-18)

I don't want to question the strengths and weaknesses of the model of developmental psychology here. All I want to do here is to present the concept of myth. I am using the word "myth" to refer to what we take for granted within a society as given, as obvious, as what happens. That which is so obvious that it never actually occurs to us to seriously question it. As Hillman points out, myths arise dependent upon a given culture. What is obvious to one culture is far from obvious to another culture, and vice versa. This is the kind of problem we get involved in when we "translate" from one culture into another, or "interpret" one culture in terms of another.

Hence the answer to my question, what is interpretation? To interpret means to read one myth in terms of another. We are all living within a myth, the myth or myths that provide us with our fundamental world view. Psychotherapists are reading the Buddhist myth in terms of their psychotherapeutic myth. In order to interpret, we must take the alien myth and read it through a grid, as it were, a conceptual grid which can rearrange the parts of the alien myth and make them coherent for us. In this process, one particular myth must be dominant, because one particular myth must provide that through which or in terms of which the other is read. Psychotherapists interpret Buddhism in terms of the myth of psychotherapy, so what naturally emerges is a view of Buddhism as colonised by psychotherapy. Psychotherapy becomes hierarchically superior to Buddhism. But to understand Buddhism, one must enter the Buddhist myth, and once we are within that myth, then we will naturally

read psychotherapy in terms of Buddhism. When we do that, Buddhism becomes hierarchically superior to psychotherapy.

Rubin says Enlightenment is impossible, because in the myth of psychotherapy the absence of the unconscious mind is impossible. But the myth of Theravada Buddhism does not posit the existence of an unconscious mind. The closest Theravada psychology comes to the notion of an unconscious is the concept of anusaya kilesa, the latent afflictions. Bodhi, in this myth, implies the absence of all anusaya kilesa, the absence of all latent afflictions.

As we have seen above when talking about specific conditionality and dependent arising, the Buddhist world view is one of dynamic process. All phenomena arise and cease. Fundamental to the Buddhist myth is the concept of anatta, or not-self. When we do vipassana meditation, we train ourselves to see the discontinuities in our experience. As we do this, we see our experience as an continuous flow of arising and ceasing, arising and ceasing, endlessly. We become intimate with change, or, in Buddhist terms, impermanence (aniccata).

Normally when we see change we assume an underlying entity which undergoes change. For example, we all know the weather is constantly changing: today it is hot, tomorrow will be cooler; yesterday was wet, today is dry. However, the very language we use shows that we assume an underlying entity, which we call "weather," which, while subject to change, itself remains unchanged. We all know that our experience is constantly changing, but we all assume there exists an underlying person - "me" - who, while subject to change, himself or herself remains unchanged. In other words, while we all know change, we all assume there is someone to whom change occurs. This unexamined assumption is one of our

guiding myths, and it is from within this myth that we undertake Buddhist practice.

The teaching of anatta denies the existence of some one or some thing which underlies the process of change. For Buddhism, what there is, is process, and all there is, is process. Hence, from within the Buddhist myth, the contents of the mind arise and cease, and there is no mind beyond or beneath that process of arising and ceasing. There is nothing which underlies this process. Whence do the contents of the mind - our drives, desires, fears and hatreds - arise? Where do they go when they cease? We don't know. The myth of psychotherapy posits the existence of a something, an Unconscious, which is the repository of these mental contents. But inside the Buddhist myth, all that exists are causal patterns, and to say thoughts and emotions arise from the unconscious is simply to say we do not know the causal patterns from which our thoughts and emotions arise. Suddenly they are just here, and then they are gone. But a buddha, an awakened one, sees the complete network of causal relationships. This is dependent arising. He sees the specific cause of each specific experience. This is specific conditionality. The totality of this seeing is bodhi, awakening, and this process is all there is to see.

So when Rubin judges the Buddhist doctrine of awakening on the basis of the presence or absence of an unconscious mind, he is judging one cultural myth by the standards of another, and assuming the universal application, and therefore the superiority, of his own cultural myth. Rubin begins his book by criticising what he calls Eurocentric and Orientocentric approaches to the study of Buddhism and psychotherapy. A Eurocentric approach sees psychoanalysis as superior, and an Orientocentric approach sees Buddhism as superior. Rejecting this, he seeks to allow a conversation between

Buddhism and psychotherapy which brings out the strengths and weaknesses of each tradition, allowing each to supplement and improve the other (6-7). In fact he does no such thing, and instead ends with a firmly fixed hierarchy in which psychotherapy is on top and Buddhism on the bottom.

As long as we read one myth in terms of the other, some such hierarchy of values is inevitable. Rubin and Epstein end up destroying Buddhism and turning it into a new form of psychotherapy. They are not content to simply leave Buddhism alone and use vipassana meditation as a psychotherapeutic tool, but insist on reinventing Buddhism on their own terms. Unfortunately, they are so confused about Buddhism that their newly minted Buddhism is clearly inferior to the original. Kornfield's new Buddhism is more sophisticated than that of Epstein and Rubin, partly because he knows more about it in the first place, and partly because he reads both Buddhism and psychotherapy from a third viewpoint which is neither Buddhism nor psychotherapy, but which floats above both. This is his "Great Way," which supposedly transcends all spiritual traditions and all therapies. But he also ends up with a firmly entrenched hierarchy, with a new Buddhism of his own invention.

Conclusion

And what, after all, is wrong with this? Many people may conclude that they prefer these new versions of Buddhism to any of the traditional models currently on offer. Certainly if book sales are anything to go by, Kornfield's Great Way is a very suitable commodity for our post-modern spiritual marketplace. But let's be clear on what is happening. Let's not try to fool ourselves or anyone else that we are practising the teachings of the Buddha when we follow any of these

ersatz forms of Buddhism. Let's be clear whose teachings we are putting our faith in.

Kornfield reduces Buddhism to a collection of spiritual disciplines or techniques, the most important of which is vipassana meditation. These disciplines are part of the glad-bag of techniques which together make up the Great Way. Practising in this spirit, the seeker can avoid ever becoming a finder, because he never trades down into joining any one specific tradition. For Kornfield, the goal of practice is spiritual maturity, and spiritual maturity "is not about adopting any one particular philosophy or set of beliefs or teachings" (316), but involves the freedom to move from spiritual vehicle to spiritual vehicle, according to the seeker's desire and, presumably, the advice of his therapist. The seeker never becomes a finder, never becomes someone who puts their faith in one tradition and follows it without reservation, without holding back. Always the seeker keeps that sense of separation, that sense of alienation inherent in the knowledge that the tradition within which he practices is just another commodity in the spiritual marketplace, which, in the event of difficulty, can be traded in for the latest model.

Epstein and Rubin want to rewrite Buddhism on their own terms, taking the ocean of the Buddha's wisdom and reducing it to a puddle small enough to accommodate the views of Freud and his successors. Their Buddhism is shallow, limited and extremely muddled, a Buddhism which accurately reflects their own confusion and ignorance, but has little connection with any living Buddhist tradition.

What's the alternative? In one word, faith. Faith involves a surrender to the tradition, which in Buddhism is expressed as taking refuge in the three treasures of Buddha, Dharma and Sangha. We began this paper with Jack

Kornfield's assertion that half the students who attempt the three month retreat at IMS cannot engage vipassana meditation because of the suffering they are undergoing. In the Nidana-vagga of Samyutta Nikaya the Buddha in one passage expounds in brief the full path from suffering to liberation. He explains that suffering gives rise to faith (saddha), faith gives rise to delight (pamojja), delight gives rise to rapture, rapture gives rise to calm, calm gives rise to bliss, bliss gives rise to concentration, concentration gives rise to knowing and seeing phenomena as they are, knowing and seeing phenomena as they are gives rise to disenchantment, disenchantment gives rise to the fading of passion, and the fading of passion gives rise to liberation (S 2.30-3). Note how the process begins. From suffering we proceed to delight, and what turns suffering into delight is faith. Faith is the missing ingredient in the strange attempt to psychotherapeutise Buddhism. None of the therapists we have looked at here seem to have taken seriously the thought that what we need to do is cultivate faith in the three treasures of Buddha, Dharma and Sangha. Presumably they are far too sophisticated for that - or perhaps they just feel that faith won't sell.

Buddhism is not a collection of spiritual or therapeutic techniques. Buddhism is an ocean. If we want we are free to paddle on the edge of the shore, trying a technique here or a therapy there, occasionally getting our feet wet, but staying safely within our limitations. Or we can take the advice of Dogen Zenji, who said: "Arouse the mind that seeks the way, and plunge into the ocean of Buddhism." Ultimately the future of Buddhism in the West will be decided by those who take the plunge, because the paddlers will always draw back and, rather than adapt Buddhism to its new home, will develop new forms of Buddhised psychotherapy. For ultimately we must choose whom we will follow. We can follow Buddha or we

can follow Freud; we cannot do both, because they are just not travelling in the same direction.

BODHISATTVA WARRIORS

by Chagdud Tulku Rinpoche

Many great Buddhist masters have prophesied that centuries from now, when the forces of aggression amass on earth and no reason can turn them back, the kingdom of Shambhala will open its gates and its enlightened warriors will come forth into battle. Whoever they encounter will be given a choice--turn away from non virtue to virtue or, by direct, wrathful intervention, be liberated into a pure land beyond suffering.

A Buddhist story tells of a ferry captain whose boat was carrying 500 bodhisattvas in the guise of merchants. A robber on board planned to kill everyone and pirate the ship's cargo.

The captain, a bodhisattva himself, saw the man's murderous intention and realized this crime would result in eons of torment for the murderer. In his compassion, the captain was willing to take hellish torment upon himself by killing the man to prevent karmic suffering that would be infinity greater than the suffering of the murdered victims. The captain's compassion was impartial; his motivation was utterly selfless.

Now, as I write this, the Middle East is inflamed with war. Watching the television news, I pray that this war will prevent greater wars, greater suffering, and that those opposed to war develop the skills to bring about authentic peace. We cannot fully discern the motivation of any participants involved in the conflict, but it is unlikely that many have the ability to bring about ultimate liberation for friends and enemies alike, or that they will be able to sustain the bodhisattva's impartial compassion as they engage in conflict.

What we can know is our own minds. We can adhere to Buddhist ideals in our activities, whether we are combatants, protestors, decision-makers or concerned witnesses. We can pray that whatever virtue there is in the situation prevails, that genuine peace be established. The Buddha has taught that throughout countless lifetimes all beings have been our parents and have shown us great kindness. Now they have

fallen under the sway of the mind's poisons of desire, anger, ignorance, and they suffer terribly. Could we exclude any from our compassion any more than the sun could exclude any from the warmth and radiance of its rays.

As we aspire to peace, now and in the future cycles of our existence, we cannot deny the possibility that each of us may be confronted with the need for wrathful intervention in order to prevent greater harm. May the spiritual mining we undertake now allow us to enter such situations free from the delusions of the mind's poisons. May we act with spontaneous compassion to bring ultimate liberation to all alike, both victims and aggressors.

Mirror of Freedom
Number 8

Practice Questions: Part One
Chagdud Tulku Rinpoche

May all beings find liberations in the vast expanse of the mirror of freedom.

These questions were asked of Chagdud Rinpoche by sangha members of Ghagdud Gonpa Odsal Ling in the fall of 1992. Rinpoche's responses were translated by Richard Barron.

This set of questions came to Mount Kailas BBS in support of Chagdud Tulku Rinpoche's visit to Boston, October 16 - 18 , 1994. The Mirror of freedom series is produced three times a year. Inquiries concerning subscriptions to Mirror of Freedom and purchase of other copies can be directed to Chagdud Gonpa Foundation.

MIRROR OF FREEDOM

Question: You have taught, time and time again, that the difference between practitioners and nonpractitioners is that nonpractitioners perceive the phenomenal world as if looking through a window, whereas practitioners do so as if looking in a mirror. Could you say more about

this, since it is so important for our practice ?

Response: If we want to help others eliminate flaws and develop positive qualities, we have to ensure first that we ourselves are free of flaws and endowed with positive qualities. Even if we are not completely flawless, even if we have not fully revealed all of our positive qualities, we should at least have purified our mindstream enough to help others rather than simply criticize them.

That is why it is important to examine our own minds. When we have a negative thought, or even a neutral one - one that isn't particularly non-virtuous - we must try to transform it into a virtuous one. The more we redirect the mind, the more its outer expression in speech and actions becomes virtuous. The root of all phenomena in samsara and nirvana is the mind. Virtuous and nonvirtuous states of mind are responsible for the karma that leads to suffering or happiness.

If we repeatedly examine our thoughts, words and actions, and tame our own minds, our shortcomings will begin to diminish and our positive qualities grow. The more our flaws are reduced, the more those around us will benefit. The more our positive qualities are enhanced, the more we will be capable of helping others cultivate those qualities themselves.

Question: Of the Three Jewels - the Buddha, dharma and sangha - the qualities of the precious sangha are sometimes the most difficult to see. It is often hard to maintain pure view about our peers. How does establishing a good relationship with fellow practitioners benefit our practice? How can we give rise to pure view and appreciate the positive qualities of sangha members?

Response: If we consider the infinite number of beings in the six realms of samsara proportionately, we could say that the number of beings in the hell realms is like the number of dust particles in a huge country. The number of pretas, or hungry ghosts, is equivalent to the grains of sand in the river Ganges and the number of animals, to the number of grains in a large bowl of swollen mash used to ferment beer. The demigods are equal in number to the snowflakes in a blizzard or raindrops in a storm. The number of gods and humans is like the number of grains of sand that could fit on your fingernail.

So, to begin with, human existence is very rare, for human beings are

far less numerous than other beings. Further, although many countries are populated by hundreds of millions of human beings, how many of those people are actively pursuing a path of virtue and benefit for others through their thoughts, words and actions? How many are trying to avoid harming others and acting in nonvirtuous ways? The number of such people can be likened to the number of stars one can see in the daytime - very few indeed.

The Tibetan word for the Sanskrit sangha is gedun, which means someone who yearns for, or is motivated by, virtue. If people have that quality of seeking virtue, even though they may not be flawless, their motivation and personal commitment make them very special. Members of the Mahayana sangha vow not only to free themselves from cyclic existence, but to free others as well. How could we not see that commitment as the best of all qualities? We mustn't ignore it and focus instead on more temporary and personal shortcomings. Those with whom we associate in the sangha are our companions until we attain enlightenment. By viewing them with respect and appreciation, we are benefiting ourselves because this increases our merit. It purifies our negative habits and the effects of negative karma. So there is a direct relationship between our attitude of respect for the sangha and the benefit that we as individual practitioners gain.

Question: Perhaps our biggest obstacle on the path is the fact that we're fickle, that our diligence in practice vacillates. Would you please speak about how a beginning practitioner can develop his or her enthusiasm in order to practice steadily?

Response: In order to develop diligence, we need to think again and again about the precious opportunity that human existence provides - to recall the freedom and opportunity that we have to pursue spiritual development and to remind ourselves that spiritual practice is the only way to discover the essence of being human. We should further understand that we must use this precious opportunity well, for we have no idea when we will die. We only know that we will die. Once we have died, the only thing that will make any difference is our positive and negative karma. Positive karma will lead to temporary and ultimate happiness, and negative karma to further suffering. This understanding should be based on a firm belief in the infallibility of karma, not just on an abstract notion.

If our mind follows our negative karmic patterns, we will be propelled into states of rebirth where there is only suffering - whether the intense heat and cold of the hells; the relentless hunger and thirst of the hungry ghost realms; the suffering due to stupidity and the struggle for survival among animals; birth, old age, sickness, death and other sufferings of the human condition; the suffering due to quarreling, jealousy and strife in the demigod realms; or the suffering due to the fall from the god realms.

Understanding these four thoughts - precious human birth, impermanence, karma and suffering - contemplating them, calling them repeatedly to mind and, finally, meditating on them is the most excellent way to develop unswerving diligence.

Question: Sometimes emotions like anger, desire or romantic love arise so strongly in the mind they seem to have their own power and we can become obsessed with them. As much as we might try to change these habit patterns, no matter how much energy or effort we expend, we often can't overcome them. Where does this power of the emotions come from? What antidote, technique or method can we use to deal with them?

Response: Whether we are experiencing attachment or aversion, the object of our emotion, the person or thing toward which we feel anger or desire, is not permanent, or singular, or autonomous. Quite the opposite. All of the objects of our emotions are impermanent, composed of many different parts and subject to external influences, with no self-power or autonomy. Once we understand this, we need to contemplate it again and again. It's not enough to recognize this to be true and then forget about it. We must think about it repeatedly so that we gradually come to the realization that the objects of our attachment and aversion do not really exist, but are like images in a dream. This is the primary antidote to strong emotions.

Another approach involves using an emotion like anger to antidote itself: the mode of anger is employed skillfully to tame the ordinary, confused aspect of anger. For example, in certain wrathful Vajrayana practices, we may utilize the imagery of the slaying of enemies. However, this involves no externalized aggression, for we recognize that the enemy we experience as outside of us is not what is preventing us from achieving liberation: the real obstacle is our anger toward the enemy. So

we focus not on defeating an external enemy, but on liberating the internal enemy, the true enemy: our own hatred and anger, which, if acted upon, cause us to create negative karma. In these practices, we liberate this inner enemy in the context of the four immeasurable qualities of love, compassion, joy and equanimity and from the perspective of wisdom, the realization that neither the self nor phenomena have true self-nature.

We can use a similar approach with desire. For example, sexual attraction involves the object of one's desire, oneself as the one who desires and the sexual activity or interactions between oneself and the object of our attraction. In Vajrayana these are referred to as the "three spheres" of subject, object and the activity between them. From the point of view of its essential nature, neither the object of desire, oneself as the desiring subject nor any activity based on that desire could ever be established to have its own true existence. Each is empty of self-nature. Yet the inherent dynamic energy of emptiness manifests unceasingly. This is the display of pristine awareness as phenomena.

So we can engage in activity based on desire from a higher perspective. If we understand it from the point of view of its essential nature rather than in terms of what takes place when we feel it and act on it, we can experience the ordinary pleasure of sexual activity nondually as the union of bliss and emptiness. In this way, we use the mode of desire skillfully to tame ordinary, confused desire. Without this view of its essential nature, however, our activity will be based on ordinary desire and we will accumulate karma.

Even though we may embark on this path and rely on such meditation, we won' t immediately transform our perceptions, for we are dealing with very strong habitual patterns. But with consistent, stable practice, our negativities will gradually diminish and all that is positive, virtuous and supportive of enlightenment will grow. Regardless of the particular means we use, the important thing is to apply them over and over again, without becoming discouraged, remembering that the process takes time.

Question: There is a child in the sangha whose kitten broke its leg. The child prayed to Tara for help. At first, the kitten improved, but eventually died. Very disappointed, the child decided there is no benefit to doing Tara practice. In another case, a healthy young woman who practiced Vajrasattva meditation for one year felt protected by the

blessings of that deity. Then she got cancer and developed wrong views about the dharma. She felt that her practice had been a waste of time. How realistic is it to place hope on immediate benefit from our practice?

Response: To explain it in a way that the child could understand, we might use the example of an excellent car mechanic. If you have a car that isn't running well, how realistic is it to expect a very skilled mechanic to fix it? In the majority of cases, one could expect the mechanic to fix the car. But no matter how skilled the mechanic, if the car is worn out, it cannot be fixed.

What happens to a living being, whether a human or a kitten, depends on karma, as well as the incidental and immediate circumstances of life. If we have the karma to sustain this particular body, we will live. But if the power to sustain our existence dissipates, there is no way anyone can bring it back. Although the child's prayers didn't seem to have an immediate effect, this doesn't mean that the practice done on behalf of the kitten was wrong or useless; it will benefit that being in a future lifetime.

People can sometimes overcome enormous obstacles through their practice, even in this lifetime, when three factors come together: faith, karma that allows for the obstacles to be overcome, and the blessings and compassion of one's object of prayer.

Question: What is the origin of mantras? What is their function? Is it just that by using them our mind becomes stable or one-pointed, or are there other benefits?

Response: The power and effectiveness of mantra are due, first, to the fact that the sounds and forms of the mantra syllables are in essence not beyond emptiness or dharmakaya, and are therefore established by the true nature of reality itself. Second, the particular form that mantras take - the combination of certain syllables and their sound - is self-arising from the innate compassion of buddhas and bodhisattvas. This is the establishment of their inherent power on the phenomenal level. Third, mantras have been used by great practitioners who have proved their value, consecrated them and imbued them with their own prayers and aspirations. This is called establishment through blessing. Finally, if people with faith in their effectiveness recite mantras repeatedly, they

will purify their obscurations and karma and gain both ordinary and sublime siddhis, or spiritual accomplishments. This is called establishment through the power and energy of mantra. In our practice, both the mantras we use and the deities associated with them are endowed with these four kinds of establishment.

Question: Many people, and in fact many practitioners, doubt whether wisdom deities exist. Some believe that the deity is a higher form of sentient being who can guide us on the path or protect us. Others say the deity is a symbol or an expression of the true nature of our own mind. Ultimately, what is the nature of what we call "deity"?

Response: The term "deity" refers to both dharmakaya and rupakayas, or form manifestations. When we say the "dharmakaya of buddha," we are referring to a flawless state endowed with all positive qualities in which the fundamental nature of all phenomena is completely evident, free of all conceptual elaboration. The radiance of dharmakaya manifests unceasingly as the rupakayas: as the sambhogakaya in the perception of those with purified karma, and as the nirmanakaya to those with ordinary, unpurified karma.

At present, because we are temporarily, superficially subject to confusion, we experience reality in a dualistic way, with hope and fear, as self and other, high and low. Although superficial stains and distortions in our mindstream have not been purified, our essential nature is pure. The difference between the deity and ourselves is that the deity embodies a twofold purity - that of mind's essential nature and that due to the purification of obscurations - whereas we are essentially pure, but not yet pure on the temporary, superficial level. Because of that, we perceive the deity as separate from us. Once the habit of perceiving things as distinct from us has been purified and our obscurations thus removed, we will recognize that there is no deity other than the self-manifesting appearances of the deity and pureland, beyond concepts of separate or identical.

Question: Do Western students have obstacles to their dharma practice that people in other countries don't have? Many Western practitioners maintain an outer dharmic conduct, and may be familiar with the names of many deities or hold sectarian views about different teaching lineages,

but it would be difficult to say that we are true practitioners, that we have revealed love, compassion and wisdom from deep within the mindstream. Also, do people in the West enjoy specific advantages that will aid their practice?

Response: Many Westerners are intelligent, able to assess what different traditions have to offer and to make good decisions concerning what is important based upon that intelligent examination. But Western dharma students have a lack of information, simply because the Buddhist teachings have not been available for very long in the West. Also, as new dharma students, Westerners are sometimes not able to discern whether teachings are being presented in a biased or prejudiced manner. This doesn't happen often - most lamas teach in a nonsectarian and good-hearted way - but when it does and students are too inexperienced to recognize the distortion of genuine dharma, it can be a serious obstacle. Other than that, I don't see any particular problem unique to them. Western practitioners find it easy to change outer deportment, habits and so forth, but also realize that the inner transformation through practice is more important.

In a greater sense, we are all dealing with habitual patterns and negative karma that have been reinforced through time without beginning. Most Westerners must deal further with the fact that during the first part of their lives, they had no exposure to the teachings of dharma, and therefore had no opportunity to become familiar with practice, much less to spend the amount of time in practice that is necessary for inner transformation. They're starting fresh.

It's naive to assume that new practitioners will immediately eliminate all their shortcomings and develop all the positive qualities of practice. But if, having entered the door of dharma at whatever stage of life, they continue to practice then love, compassion and wisdom will grow. If people practice, they can improve. There is no difference here between Easterners and Westerners. If, when we first encounter the dharma, we think we are going to be perfect from the very beginning and that if that doesn't happen there is no point in practicing, we will be turning away from the only means we have to become perfect, to become true practitioners. First we must be exposed to the teachings and then we must practice so that over time, step by step, we will become true embodiments of the dharma.

****

Chagdud Tulku Rinpoche, a highly-realized meditation master, artist and Tibetan physician, was born in Eastern Tibet in 1930. Recognized at an early age as an incarnation of the Abbot of Chagdud Gonpa monastery, he was thoroughly trained by many of Tibet's greatest lamas in the philosophy and meditation practices of Vajrayana Buddhism. He fled Tibet at the time of the Chinese occupation in 1959 and, at the request of H. H. Dudjom Rinpoche, helped establish and administer several refugee camps in both India and Nepal.

At the request of several American students, he came to the U. S. in 1979. Since then, through the Chagdud Gonpa Foundation, he has established centers for the study and practice of Vajrayana Buddhism throughout the United States, Canada, Europe and Brazil.

Chagdud Tulku's primary residence is in Junction City, in the Trinity Alps region of Northern California.

Chagdud Rinpoche, abbot of Chagdud Gonpa, fled Tibet during the Chinese invasion and worked tirelessly over the next twenty years in Tibetan refugee camps in India and Nepal. At the urging of Western students, he came to the United States in 1979 and has dedicated his remaining years to the preservation of the Tibetan Buddhist arts and teachings.

Rinpoche is a highly realized meditation master and accomplished scholar, artist and poet. As part of his lama training, which began at the age of five, he received extensive instruction in all aspects of Tibetan Buddhism, completed two three-year retreats, and studied with some of the greatest Dzogchen and Vajrayana masters of his time. His extensive training, along with his humor, compassion and skill as a teacher, has made it possible for him to transmit his profound insights to people of widely divergent backgrounds and interests. Chagdud Rinpoche's generation is the last to have absorbed the full cultural and spiritual heritage of Tibet and he is among those few who are bringing this knowledge to the West.

The following excerpt is from Chagdud Rinpoche's "Gates to Buddhist Practice," the first book of "The Living Dharma Series: The Oral Teachings of Chagdud Tulku," to be published by Padma Publishing.

To understand how delusion arises, practice watching your mind. Begin by simply letting it relax. Without thinking of the past or the future, without feeling hope or fear about this thing or that, let it rest comfortably, open and natural. In this space of the mind, there is no problem, no suffering. Then something catches your attention--an image, a sound, a smell. Your mind splits into inner and outer, self and other, subject and object. In simply perceiving the object, there is still no problem. But when you zero in on it, you notice that it's big or small, white or black, square or circular; and then you make a judgment--for example, whether it's pretty or ugly. Having made that judgment, you react to it: you decide you like it or don't like it. That's when the problem starts, because "I like it" leads to "I want it." We want to possess what we perceive to be desirable. Similarly, "I don't like it" leads to "I don't want it." If we like something, want it, and can't have it, we suffer. If we don't want it, but can't keep it away, again we suffer. Our suffering seems to occur because of the object of our desire or aversion, but that's not really so--it happens because the mind splits into object-subject duality and becomes involved in wanting or not wanting something.

We often think the only way to create happiness is to try to control the outer circumstances of our lives, to try to fix what seems wrong or to get rid of everything that bothers us. But the real problem lies in our reaction to those circumstances. What we have to change is the mind and the way it experiences reality.

For it is our emotions that propel us through extremes, from elation to depression, from good experiences to bad, from happiness to sadness--a constant swinging back and forth. Emotionality is the by-product of hope and fear, attachment and aversion. We have hope because we are attached to something we want. We have fear because we are averse to something we don't want. As we follow our emotions, reacting to our experiences, we create karma - perpetual motion that inevitably determines our future. We need to stop the extreme swings of the

emotional pendulum so that we can find a place of centeredness.

When we first begin to transform the emotions, we apply the principle of iron cutting iron or diamond cutting diamond. We use thought to change thought. A negative thought such as anger is antidoted by a virtuous thought such as compassion, while desire can be antidoted by the contemplation of impermanence.

In the case of attachment, begin by determining what it is you're attached to. For example, you might, after much effort, succeed in becoming famous, thinking this will make you happy. Then your fame triggers jealousy in someone, who tries to shoot you. What you worked so hard to create is the cause of your own suffering. Or you might work very hard to become wealthy, thinking this will bring happiness, only to lose all your money. The loss of wealth in itself is not the source of suffering, only attachment to having it.

We can lessen attachment by contemplating impermanence. It is certain that whatever we're attached to will either change or be lost. A person may die or go away, a friend may become an enemy, a thief may steal our money. Even our body, to which we're most attached, will be gone one day. Knowing this not only helps to reduce our attachment, but gives us a greater appreciation of what we have while we have it. For example, there is nothing wrong with money, but if we're attached to it, we'll suffer when we lose it. Instead, we can appreciate it while it lasts, enjoy it and enjoy sharing it with others, and at the same time know it's impermanent. Then when we lose it, the emotional pendulum won't make as wide a swing toward sadness.

Imagine two people buy the same kind of watch on the same day at the same shop. The first person thinks, "This is a very nice watch. It will be helpful to me, but it may not last long." The second person thinks, "This is the best watch I've ever had. No matter what happens, I can't lose it or let it break." If both people lose their watch, the one who is attached will be much more upset than the other.

If we are fooled by life and invest great value in one thing or another, we may find ourselves fighting for what we want and against any

opposition. We may think that what we're fighting for is lasting, true, and real, but it's not. It's impermanent, it's not true, it's not lasting, and ultimately, it's not even real.

Our life can be compared to an afternoon at a shopping center. We walk through the shops, led by our desires, taking things off the shelves and tossing them in our baskets. We wander around, looking at everything, wanting and longing. We see a person or two, maybe smile and continue on, never to see them again.

That's what life is like. Driven by desire, we don't appreciate the preciousness of what we have. We need to realize that the time we have to be with our loved ones, our friends, our family, our co-workers is very brief. Even if we lived to a hundred and fifty, that would be very little time to enjoy and utilize our human opportunity.

Young people think their lives will last a long time; old people think life will end soon. But we can't assume these things. Our life comes with a built-in expiration date. There are many strong and healthy people who die young, while many of the old and sick and feeble live on and on. Not knowing when we'll die, we need to develop an appreciation for and acceptance of what we have, while we have it, rather than continuing to find fault with our experience and seeking, incessantly, to fulfill our desires.

If we find ourselves worrying whether our nose is too big or too small, we should think, "What if I had no head--now that would be a problem!" As long as we have life, we should rejoice. If everything doesn't go exactly as we'd like, we can accept it. If we contemplate impermanence deeply, patience and compassion will arise. We will hold less to the apparent truth of our experience, and the mind will become more flexible. Realizing that one day this body will be buried or burned, we will rejoice in every moment we have rather than make ourselves or others unhappy.

Now we are afflicted by "me-my-mine-itis," a condition caused by ignorance. Our self-centeredness and self-important thinking have become very strong habits. In order to change them, we need to refocus. Instead

of concerning ourselves with "I" all the time, we must redirect our attention to "you" or "them" or "others." Reducing self-importance lessens the attachment that stems from it. When we focus outside ourselves, ultimately we realize the equality of ourselves and all other beings. Everybody wants happiness; nobody wants to suffer. Our attachment to our own happiness expands to an attachment to the happiness of all.

Until now our desires have tended to be very short term and superficial. If we are going to wish for something, let it be nothing less than complete enlightenment for all sentient beings. That's something worthy of desire. Continually reminding ourselves of what is truly worth wanting is an important element in developing pure practice.

Desire and attachment won't change overnight, but desire becomes less ordinary as we redirect our worldly yearning toward the aspiration to become enlightened for the benefit of others. At the same time, we don't abandon the ordinary objects of our desires--relationships, wealth, fame--but our attachment to them lessens as we contemplate their impermanence. Not rejecting them, rejoicing in our fortune when they arise, yet recognizing that they won't last, we begin to build qualities of spiritual maturity. As our attachment slowly decreases, harmful actions that would normally result from attachment are reduced. We create less negative karma, more fortunate karma, and the mind's positive qualities gradually increase.

Later, after we've done more meditation practice, we can try an approach that's different from contemplation, different from using thought to change thought: revealing the deeper nature, or wisdom principle, of the emotions as they arise.

If you are in the midst of a desire attack--something has captured your mind and you must have it--you won't get rid of the desire by trying to suppress it. Instead, you can begin to see through desire by examining what it is. When it arises in the mind, ask yourself, "Where does it come from? Where does it dwell? Can it be described? Does it have any color, shape, or form? When it disappears, where does it go?"

This is an interesting situation. You can say that desire exists, but

if you search for the experience, you can't quite grasp it. On the other hand, if you say it doesn't exist, you're denying the obvious fact that you are feeling desire. You can't say that it exists, nor can you say that it does not exist. You can't say that it's "both" or "neither," that it both does exist and does not exist, or that it neither exists nor does not not exist. This is the meaning of the true nature of desire beyond extremes.

It's our failure to understand the simplicity of the natural state that gets us into trouble. No conceptual structure will describe the true nature of an emotion. We experience it the way we do because we don't understand its essential nature. Once we do, the emotion tends to dissolve.

Then we're not repressing the emotion, but neither are we encouraging it. We are simply looking clearly at what is taking place. If we set a cloudy glass of water aside for a while, it will settle by itself and become clear. Instead of judging the experience of desire, we look directly at its nature, what is known as "liberating it in its own ground." Then it simply dissolves.

Each negative emotion, or mental poison, has an inherent perfection that we don't recognize because we are so accustomed to its appearance as emotion. Just as poison can be taken medicinally to effect a cure, each poison of the mind, worked with properly, can be transformed to its wisdom nature and thus enhance our spiritual practice.

If while in the throes of desire, you simply relax, without moving your attention, that space of the mind is called discriminating wisdom You don't abandon desire--instead you reveal its wisdom nature.

Trungpa, Chšgyam; Cutting Through Spiritual Materialism; Shambhala Publications, Inc.; Boston, Massachusetts; 1973.

Introduction

The following series of talks was given in Boulder, Colorado in the fall of 1970 and the spring of 1971. At that time we were just forming Karma Dzong, our meditation center in Boulder. Although most of my students were sincere in their aspiration to walk on the spiritual path, they brought to it a great deal of confusion, misunderstanding and expectation. Therefore, I found it necessary to present to my students an overview of the path and some warnings as to the dangers along that path.

It now seems that publishing these talks may be helpful to those who have become interested in spiritual disciplines. Walking the spiritual path properly is a very subtle process; it is not something to jump into naively. there are numerous sidetracks which lead to a distorted, ego-centered version of spirituality; we can deceive ourselves into thinking we are developing spiritually when instead we are strengthening our egocentricity through spiritual techniques. This fundamental distortion may be referred to as spiritual materialism.

These talks first discuss the various ways in which people involve themselves with spiritual materialism, the many forms of self-deception into which aspirants may fall. After this tour of the sidetracks along the way, we discuss the broad outlines of the true spiritual path.

The approach presented here is a classical Buddhist one - not in a formal sense, but in the sense of presenting the heart of the Buddhist approach to spirituality. Although the Buddhist way is not theistic it does not contradict the theistic disciplines. Rather the differences between the ways are a matter of emphasis and method. The basic problems of spiritual materialism are common to all spiritual disciplines. The Buddhist approach begins with our confusion and suffering and works toward the unraveling of their

origin. The theistic approach begins with the richness of God and works toward raising consciousness so as to experience God's presence. But since the obstacles to relating with God are our confusions and negativities, the theistic approach must also deal with them. Spiritual pride, for example, is as much a problem in the theistic disciplines as in Buddhism.

According to the Buddhist tradition, the spiritual path is the process of cutting through our confusion, of uncovering the awakened state of mind. When the awakened state of mind is crowded in by ego and its attendant paranoia, it takes on the character of an underlying instinct. So it is not a matter of building up the awakened state of mind, but rather of burning out the confusions which obstruct it. In the process of burning out these confusions, we discover enlightenment. If the process were otherwise, the awakened state of mind would be a product, dependent upon cause and effect and therefore liable to dissolution. Anything which is created must, sooner or later, die. If enlightenment were created in such a way, there would always be the possibility of ego reasserting itself, causing a return to the confused state. Enlightenment is permanent because we have not produced it; we have merely discovered it. In the Buddhist tradition the analogy of the sun appearing from behind the clouds is often used to explain the discovery of enlightenment. In the meditation practice we clear away the confusion of ego in order to glimpse the awakened state. The absence of ignorance, of being crowded in, of paranoia, opens up a tremendous view of life. One discovers a different way of being.

The heart of the confusion is that man has a sense of self which seems to him to be continuous and solid. When a though or emotion or even occurs, there is a sense of someone being conscious of what is happening. You sense that you are reading these words. This sense of self is actually a transitory, discontinuous event, which in our confusion seems to be quite solid and continuous. Since we take our confused view as being real, we struggle to maintain and enhance this solid self. We try to feed it pleasures and shield it from pain. Experience continually threatens to reveal our transitoriness to us, so we continually struggle to cover

up any possibility of discovering our real condition. "But," we might ask, "if our real condition is an awakened state, why are we so busy trying to avoid becoming aware of it?" It is because we have become so absorbed in our confused view of the world, that we consider it real, the only possible world. This struggle to maintain the sense of a solid, continuous self is the action of ego.

Ego, however, is only partially successful in shielding us from pain. It is the dissatisfaction which accompanies ego's struggle that inspires us to examine what we are doing. Since there are always gaps in our self-consciousness, some insight is possible.

An interesting metaphor used in Tibetan Buddhism to describe the functioning of ego is that of the "Three Lords of Materialism": the "Lord of Form," the "Lord of Speech," and the "Lord of Mind." In the discussion of the Three Lords which follows, the words "materialism" and "neurotic" refer to the action of ego.

The Lord of Form refers to the neurotic pursuit of physical comfort, security and pleasure. Our highly organized and technological society reflects our preoccupation with manipulating physical surroundings so as to shield ourselves from the irritations of the raw, rugged, unpredictable aspects of life. Push-button elevators, pre-packaged meat, air conditioning, flush toilets, private funerals, retirement plans, mass, production, weather satellites, bulldozers, fluorescent lighting, nine-to-five jobs, television - all are attempts to create a manageable, safe, predictable, pleasurable world.

The Lord of Form does not signify the physically rich and secure life-situations we create per se. Rather it refers to the neurotic preoccupation that drives us to create them, to try to control nature. It is ego's ambition to secure and entertain itself, trying to avoid all irritation. So we cling to our pleasures and possessions, we fear change or force change, we try to create a nest or playground.

The Lord of Speech refers to the use of intellect in

relating to our world. We adopt sets of categories which serve as handles, as ways of managing phenomena. The most fully developed products of this tendency are ideologies, the systems of ideas that rationalize, justify and sanctify our lives. Nationalism, communism, existentialism Christianity, Buddhism - all provide us with identities, rules of action, and interpretations of how and why things happen as they do.

Again, the use of intellect is not in itself the Lord of Speech. The Lord of Speech refers to the inclination on the part of ego to interpret anything that is threatening or irritating in such a way as to neutralize the threat or turn it into something "positive" from the ego's point of view. The Lord of Speech refers to the use of concepts as filters to screen us from a direct perception of what is. The concepts are taken too seriously; they are used as tools to solidify our world and ourselves. If a world of nameable things exists, then "I" as one of the nameable things exists as well. We wish not to leave any room for threatening doubt, uncertainty or confusion.

The Lord of Mind refers to the effort of consciousness to maintain awareness of itself. The Lord of Mind rules when we use spiritual and psychological disciplines as the means of maintaining our self-consciousness, of holding onto our sense of self. Drugs, yoga, prayer, meditation, trances, various psychotherapies - all can be used in this way.

Ego is able to convert everything to its own use, even spirituality. For example, if you have learned of a particularly beneficial meditation technique of spiritual practice, then ego's attitude is, first to regard it as an object of fascination and, second to examine it. Finally, since ego is seeming solid and cannot really absorb anything, it can only mimic. Thus ego tries to examine and imitate the practice of meditation and the meditative way of life. When we have learned all the tricks and answers of the spiritual game, we automatically try to imitate spirituality, since real involvement would require the complete elimination of ego, and actually the last thing we want to do is to give up the ego

completely. However, we cannot experience that which we are trying to imitate; we can only find some area within the bounds of ego that seems to be the same thing. Ego translates everything in terms of its own state of health, its own inherent qualities. It feels a sense of great accomplishment and excitement at have been able to create such a pattern. At last it has created a tangible accomplishment, a confirmation of its own individuality.

If we become successful at maintaining our self-consciousness through spiritual techniques, then genuine spiritual development is highly unlikely. Our mental habits become so strong as to be hard to penetrate. We may even go so far as to achieve the totally demonic state of complete "Egohood."

Even though the Lord of Mind is the most powerful in subverting spirituality, still the other two Lords can also rule the spiritual practice. Retreat to nature, isolation, simple, quiet, high people - all can be ways of shielding oneself from irritation, all can be expressions of the Lord of Form. Or perhaps religion may provide us with a rationalization for creating a secure nest, a simple but comfortable home, for acquiring an amiable mate, and a stable, easy job.

The Lord of Speech is involved in spiritual practice as well. In following a spiritual path we may substitute a new religious ideology for our former beliefs, but continue to use it in the old neurotic way. Regardless of how sublime our ideas may be, if we take them too seriously and use them to maintain our ego, we are still being ruled by the Lord of Speech.

Most of us, if we examine our actions, would probably agree that we are ruled by one or more of the Three Lords. "But," we might ask, "so what? This is simply a description of the human condition. Yes, we know that our technology cannot shield us from war, crime, illness, economic insecurity, laborious work, old age and death; nor can our ideologies shield us from doubt, uncertainty, confusion and disorientation; nor can our therapies protect us from the dissolution of the high states of consciousness that we may

temporarily achieve and the disillusionment and anguish that follow. But what else are we to do? The Three Lords seem too powerful to overthrow, and we don't know what to replace them with."

The Buddha, troubled by these questions, examined the process by which the Three Lords rule. He questioned why our minds follow them and whether there is another way. He discovered that the Three Lords seduce us by creating a fundamental myth: that we are solid beings. But ultimately the myth is false, a huge hoax, a gigantic fraud, and it is the root of our suffering. In order to make this discover he had to break through very elaborate defenses erected by the Three Lords to prevent their subjects from discovering the fundamental deception which is the source of their power. We cannot in any way free ourselves from the domination of the Three Lords unless we too cut through, layer by layer, the elaborate defenses of these Lords.

The Lords' defenses are created out of the material of our minds. This material of mind is used by the Lords in such a way as to maintain the basic myth of solidity. In order to see for ourselves how this process works we must examine our own experience. "But how," we might ask, "are we to conduct the examination? What method or tool are we to use?" The method that the Buddha discovered is meditation. He discovered that struggling to find answers did not work. It was only when there were gaps in his struggle that insights came to him. He began to realize that there was a sane, awake quality within him which manifested itself only in the absence of struggle. So the practice of meditation involves "letting be."

There have been a number of misconceptions regarding meditation. Some people regard it as a trancelike state of mind. Others think of it in terms of training, in the sense of mental gymnastics. But meditation is neither of these, although it does involve dealing with neurotic states of mind. The neurotic state of mind is not difficult or impossible to deal with. It has energy, speed and a certain pattern. The practice of meditation involves letting be - trying to go with the patter, trying to go with the

energy and the speed. In this way we learn how to deal with these factors, how to relate with them, not in the sense of causing them to mature in the way we would like, but in the sense of knowing them for what they are and working with their pattern.

There is a story regarding the Buddha which recounts how he once gave teaching to a famous sitar player who wanted to study meditation. The musician asked, "Should I control my mind or should I completely let go?" The Buddha answered, "Since you are a great musician, tell me how you would tune the strings of your instrument. " The musician said, "I would make them not too tight and not too loose." "Likewise," said the Buddha, "in you meditation practice you should not impose anything too forcefully on your mind, nor should you let it wander." That is the teaching of letting the mind be in a very open way, of feeling the flow of energy without trying to subdue it and without letting it get out of control, of going with the energy pattern of the mind. This is meditation practice.

Such practice is necessary generally because our thinking pattern, our conceptualized way of conducting our life in the world, is either too manipulative, imposing itself upon the world, or else runs completely wild and uncontrolled. Therefore, our meditation practice must begin with ego's outermost layer, the discursive thoughts which continually run through our minds, our mental gossip. The Lords use discursive thought as their first line of defense, as the pawns in their effort to deceive us. The more we generate thoughts, the busier we are mentally and the more convinced we are of our existence. So the Lords are constantly trying to activate these thoughts, trying to create a constant overlapping of thoughts so that nothing can be seen beyond them. In true meditation there is no ambition to stir up thoughts, nor is there an ambition to suppress them. They are just allowed to occur spontaneously and become an expression of basic sanity. They become the expression of the precision and the clarity of the awakened state of mind.

If the strategy of continually creating overlapping thoughts is penetrated, then the Lords stir up emotions to distract us. The exciting, colorful, dramatic quality of the emotions captures our

attention as if we were watching an absorbing film show. In the practice of meditation we neither encourage emotions nor repress them. By seeing them clearly, by allowing them to be as they are, we no longer permit them to serve as a means of entertaining or distracting us. Thus they become the inexhaustible energy which fulfills egoless action.

In the absence of thoughts and emotions the Lords bring up a still more powerful weapon, concepts. Labeling phenomena creates a feeling of a solid definite world of "things." Such a solid world reassures us that we are a solid, continuous thing as well. The world exists, therefore I, the perceiver of the world, exist. Meditation involves seeing the transparency of concepts, so that labeling no longer serves as a way of solidifying our world and our image of self. Labeling becomes simply the act of discrimination. The Lords have still further defense mechanisms, but it would be too complicated to discuss them in this context.

By the examination of his own thoughts, emotions, concepts and the other activities of mind, the Buddha discovered that there is no need to struggle to prove our existence, that we need not be subject to the rule of the Three Lords of Materialism. There is no need to struggle to be free; the absence of struggle is in itself freedom. This egoless state is the attainment of Buddhahood. The process of transforming the material of mind from expressions of ego's ambition in to expressions of basic sanity and enlightenment through the practice of meditation - this might be said to be the true spiritual path.

Spiritual Materialism

We have come here to learn about spirituality. I trust the genuine quality of this search but we must question its nature. The problem is that ego can convert anything to its own use, even spirituality. Ego is constantly attempting to acquire and apply the teachings of spirituality for its own benefit. The teachings are treated as an external thing, external to "me," a philosophy which

we try to imitate. We do not actually want to identify with or become the teachings. So if our teacher speaks of renunciation of ego, we attempt to mimic renunciation of ego. We go through the motions, make the appropriate gestures, but we really do not want to sacrifice any part of our way of life. We become skillful actors, and while playing deaf and dumb to the real meaning of the teachings, we find some comfort in pretending to follow the path.

Whenever we begin to feel any discrepancy or conflict between our actions and the teachings, we immediately interpret the situation in such a way that the conflict is smoothed over. The interpreter is ego in the role of spiritual advisor. The situation is like that of a country where church and state are separate. If the policy of the state is foreign to the teachings of the church, then the automatic reaction of the king is to go to the head of the church, his spiritual advisor, and ask his blessing. The head of the church then works out some justification and gives the policy his blessing under the pretense that the king is the protector of the faith. In an individual's mind, it works out very neatly that way, ego being both king and head of the church.

This rationalization of the spiritual path and one's actions must be cut through if true spirituality is to be realized. However, such rationalizing is not easy to deal with because everything is seen through the filter of ego's philosophy and logic, making all appear neat, precise and very logical. We attempt to find a self-justifying answer for every question. In order to reassure ourselves, we work to fit into our intellectual scheme every aspect of our lives which might be confusing. And our effort is so serious and solemn, so straight-forward and sincere, that it is very difficult to be suspicious of it. We always trust the "integrity" of our spiritual advisor.

It does not matter what we use to achieve self-justification: the wisdom of sacred books, diagrams or charts, mathematical calculations, esoteric formulae, fundamentalists religion, depth psychology, or any other mechanism. Whenever we begin to evaluate, deciding that we should or should not do this or

that, then we have already associated our practice or our knowledge with categories, one pitted against the other, and that is spiritual materialism, the false spirituality of our spiritual advisor. Whenever we a have a dualistic notion such as, "I am doing this because I want to achieve a particular state of consciousness, a particular state of being," the automatically we separate ourselves from the reality of what we are.

If we ask ourselves, "What is wrong with evaluating, with taking sides?", the answer is that, when we formulate a secondary judgment, "I should be doing this and should avoid doing that," then we have achieved a level of complication which takes us a long way from the basic simplicity of what we are. The simplicity of meditation means just experiencing the ape instinct of ego. If anything more than this is laid onto our psychology, then it becomes a very heavy, thick mask, a suit of armor.

It is important to see that the main point of any spiritual practice is to step out of the bureaucracy of ego. This means stepping out of ego's constant desire for a higher, more spiritual, more transcendental version of knowledge, religion, virtue, judgment, comfort or whatever it is that a particular ego is seeking. One must step out of spiritual materialism. If we do not step out of spiritual materialism, if we in fact practice it, then we may eventually find ourselves possessed of a huge collection of spiritual paths. We may feel these spiritual collections to be very precious. We have studied so much. We may have studied Western philosophy or Oriental philosophy, practiced yoga or perhaps studied under dozens of great masters. We have achieved and we have learned. We believe that we have accumulated a hoard of knowledge. And yet, having gone through all this, there is still something to give up. It is extremely mysterious! How could this happen? Impossible! But unfortunately it is so. Our vast collections of knowledge and experience are just part of ego's display, part of the grandiose quality of ego. We display them to the world and, in so doing, reassure ourselves that we exist, safe and secure, as "spiritual" people.

But we have simply created a shop, an antique shop. We could be specializing in oriental antiques or medieval Christian antiques or antiques from some other civilization or time, but we are, nonetheless, running a shop. Before we filled our shop with so many things the room was beautiful: whitewashed walls and a very simple floor with a bright lamp burning in the ceiling. There was one object of art in the middle of the room and it was beautiful. Everyone who came appreciated its beauty, including ourselves.

But we were not satisfied and we thought, "Since this one object makes my room so beautiful, if I get more antiques, my room will be even more beautiful." So we began to collect, and the end result was chaos.

We searched the world over for beautiful objects - India, Japan, many different countries. And each time we found an antique, because we were dealing with only one object at a time, we saw it as beautiful and thought it would be beautiful in our shop. But when we brought the object home and put it there, it became just another addition to our junky collection. The beauty of the object did not radiate out any more, because it was surrounded by so many other beautiful things. It did not mean anything anymore. Instead of a room full of beautiful antiques we created a junk shop!

Proper shopping does not entail collecting a lot of information or beauty, but it involves fully appreciating each individual object. This is very important. If you really appreciate an object of beauty, then you completely identify with it and forget yourself. It is like seeing a very interesting, fascinating movie and forgetting that you are the audience. At that moment there is no world; your whole being is that scene of that movie. It is that kind of identification, complete involvement with one thing. Did we actually taste it and chew it and swallow it properly, that one object of beauty, that one spiritual teaching? Or did we merely regard it as a part of our vast and growing collection?

I place so much emphasis on this point because I know that

all of us have come to the teachings and practice of meditation not to make a lot of money, but because we genuinely want to learn, want to develop ourselves. But if we regard knowledge as an antique, as "ancient wisdom" to be collected, then we are on the wrong path.

As far as the lineage of teachers is concerned, knowledge is not handed down like an antique. Rather, one teacher experiences the truth of the teachings, and he hands it down as inspiration to his student. That inspiration awakens the student, as his teacher was awakened before him. Then the student hands down the teachings to another student and so the process goes. The teachings are always up to date. They are not "ancient wisdom," an old legend. The teachings are not passed along as information, handed down as a grandfather tells traditional folk tales to his grandchildren. It does not work that way. It is real experience.

There is a saying in the Tibetan scriptures: "Knowledge must be burned, hammered and beaten like pure gold. Then one can wear it as an ornament." So when you receive spiritual instruction from the hands of another, you do not take it uncritically, but you burn it, you hammer it, you beat it, until the bright, dignified color of gold appears. Then you craft it into an ornament, whatever design you like, and you put it on. Therefore, dharma is applicable to every age, to every person; it has a living quality. It is not enough to imitate your master or guru; you are not trying to become a replica of your teacher. The teachings are an individual persona experience, right down to the present holder of the doctrine.

Perhaps many of my readers are familiar with the stories of Naropa and Tilopa and Marpa and Milarepa and Gampopa and the other teachers of the KagyŸ lineage. It was a living experience for them, and it is a living experience for the present holders of the lineage. Only the details of their life-situations are different. The teachings have the quality of warm, fresh baked bread; the bread is still warm and hot and fresh. Each baker must apply the general knowledge of how to make bread to his particular dough and oven. Then he must personally experience the freshness of this bread and must cut if fresh and eat it warm. He must make the teachings his

own and then must practice them. It is a very living process. There is no deception in terms of collecting knowledge. We must work with our individual experiences. When we become confused, we cannot turn back to our collection of knowledge and try to find some confirmation or consolation: "The teacher and the whole teaching is on my side." The spiritual path does not go that way. It is a lonely, individual path.

Q.Do you think spiritual materialism is a particularly American problem?

A.Whenever teachings come to a country from abroad, the problem of spiritual materialism is intensified. At the moment America is, without any doubt, fertile ground ready for the teachings. And because America is so fertile, seeking spirituality, it is possible for America to inspire charlatans. Charlatans would not choose to be charlatans unless they were inspired to do so. Otherwise, they would be bank robbers or bandits, inasmuch as they want to make money and become famous. Because America is looking so hard for spirituality, religion becomes any easy way to make money and acquire fame. So we see charlatans in the role of student, chela, as well as in the role of guru. I think America at this particular time is a very interesting ground.

Q.Have you accepted any spiritual master as a guru, any particular living spiritual master?

A.At present there is no one. I left my gurus and teachers behind in Tibet, physically, but the teachings stay with me and continue.

Q.So who are you following, more or less?

A.Situations are the voice of my guru, the presence of my guru.

Q.After Shakyamuni Buddha attained enlightenment, was there some trace of ego left in him so that he could carry on his teachings?

A.The teaching just happened. He did not have the desire to teach or not to teach. He spent seven weeks sitting under the shade of a tree and walking along the bank of a river. Then someone just happened along and he began to speak. One has no choice; you are there, an open person. Then the situation presents itself and teaching happens. That is what is called "Buddha activity."

Q.It is difficult not to become acquisitive about spirituality. Is this desire for acquisitions something that is shed along the way?

A.You should let the first impulse die down. Your first impulse toward spirituality might put you into some particular spiritual scene; but if you work with that impulse, then the impulse gradually dies down and at some stage becomes tedious, monotonous. This is a useful message. You see, it is essential to relate to yourself, to your own experience, really. If one does not relate to oneself, then the spiritual path becomes dangerous, becomes purely external entertainment, rather than an organic personal experience.

Q.If you decide to seek your way out of ignorance, you can almost definitely assume that anything you do that feels good will be beneficial to the ego and actually blocking the path. Anything that seems right to you will be wrong, anything that doesn't turn you upside-down will bury you. Is there any way out of this?

A.If you perform some act which is seemingly right, it does not mean that it is wrong, for the very reason that wrong and right are out of the picture altogether. You are not working on any side, neither the "good" side nor the "bad" side, but you are working with the totality of the whole, beyond "this" and "that." I would say

there is complete action. There is no partial act, but whatever we do in connection with good and bad seems to be a partial act.

Q.If you are feeling very confused and trying to work your way out of the confusion, it would seem that you are trying too hard. But if you do not try at all, then are we to understand that we are fooling ourselves?

A.Yes, but that does not mean that one has to live by the extremes of trying too hard or not trying at all. One has to work with a kind of "middle way," a complete state of "being as you are. " We could describe this with a lot of words, but one really has to do it. If you really start living the middle way, then you will see it, you will find it. You must allow yourself to trust yourself, to trust in your own intelligence. We are tremendous people, we have tremendous things in us. We simply have to let ourselves be. External aid cannot help. If you are not willing to let yourself grow, then you fall into the self-destructive process of confusion. It is self-destruction rather than destruction by someone else. That is why it is effective; because it is self-destruction.

Q.What is faith? Is it useful?

A.Faith could be simple-minded, trusting, blind faith, or it could be definite confidence which cannot be destroyed. Blind faith has no inspiration. It is very naive. It is not creative, though not exactly destructive. It is not creative because your faith and yourself have never made any connection, any communication. You just blindly accepted the whole belief, very naively.

In the case of faith as confidence, there is a living reason to be confident. You do not expect that there will be a prefabricated solution mysteriously presented to you. You work with existing situations without fear, without any doubt about involving yourself. This approach is extremely creative and positive. If you have definite confidence, you are so sure of yourself that you do

not have to check yourself. It is absolute confidence, real understanding of what is going on now, therefore you do not hesitate to follow other paths or deal in whatever way is necessary with each new situation.

Q.What guides you on the path?

A.Actually, there does not seem to be any particular guidance. In fact, if someone is guiding you, that is suspicious, because you are relying on something external. Being fully what you are in yourself becomes guidance, but not in the sense of vanguard, because you do not have a guide to follow. You do not have to follow someone's tail, but you sail along. In other words, the guide does not walk ahead of you, but walks with you.

Q.Could you say something more about the way in which meditation short-circuits the protective mechanisms of the ego?

A.The protective mechanism of ego involves checking oneself, which is an unnecessary kind of self-observance. Meditation is not based on meditating on a particular subject by checking oneself; but meditation is complete identification with whatever techniques you are employing. Therefore there will be no effort to secure oneself in the practice of meditation.

Q.I seem to be living in a spiritual junkyard. How can I make it into a simple room with one beautiful object?

A.In order to develop an appreciation of you collection you have to start with one item. One has to find a stepping stone, a source of inspiration. Perhaps you would not have to go through the rest of the items in your collection if you studied just one piece of material. That one piece of material could be a sign-post that you managed to confiscate in New York City, it could be as insignificant as that. But one must start with one thing, see its

simplicity, the rugged quality of this piece of junk or this beautiful antique. If we could manage to start with just one thing, then that would be the equivalent of having one object in an empty room. I think it is a question of finding a stepping stone. Because we have so many possessions in our collection, a large part of the problem is that we do not know where to begin. One has to allow one's instinct to determine which will be the first thing to pick up.

Q.Why do you think that people are so protective of their egos? Why is it so hard to let go of one's ego?

A.People are afraid of emptiness of space, or the absence of company, the absence of a shadow. It could be a terrifying experience to have no one to relate to, nothing to relate with. The idea of it can be extremely frightening, though not the real experience. It is generally a fear of space, a fear that we will not be able to anchor ourselves to any solid ground, that we will lose our identity as a fixed and solid and definite thing. This could be very threatening.

Surrendering

At this point we may have come to the conclusion that we should drop t he whole game of spiritual materialism; that is, we should give up trying to defend and improve ourselves. We may have glimpsed that our struggle is futile and may wish to surrender, to completely abandon our efforts to defend ourselves. But how many of us could actually do this? It is not as simple and easy as we might think. To what degree could we really let go and be open? At what point would we become defensive?

In this lecture we will discuss surrendering, particularly in terms of the relationship between work on the neurotic state of mind and work with a personal guru or teacher. Surrendering to the "guru" could mean opening our minds to life-situations as well as to

an individual teacher. However, if our life-style and inspiration is working toward an unfolding of the mind, then we will almost certainly find a personal guru as well. So in the next few talks we will emphasize relating to a personal teacher.

One of the difficulties in surrendering to a guru is our preconceptions regarding him and our expectations of what will happen with him. We are preoccupied with ideas of what we would like to experience with our teacher: "I would like to see this; that would be the best way to see it; I would like to experience this particular situation, because it is in exact accordance with my expectation and fascination."

So we try to fit things into pigeonholes, try to fit the situation to our expectations, and we cannot surrender any part of our anticipation to all. If we search for a guru or teacher, we expect him to be saintly, peaceful, quiet, a simple and wise man. When we find that he does not match our expectations, then we begin to be disappointed, we begin to doubt.

In order to establish a real teacher-student relationship it is necessary for us to give up all our preconceptions regarding that relationship and the condition of opening and surrender. "Surrender" means opening oneself completely, trying to get beyond fascination and expectation.

Surrender also means acknowledging the raw, rugged, clumsy and shocking qualities of one's ego, acknowledging them and surrendering them as well. Generally, we find it very difficult to give out and surrender our raw and rugged qualities of ego. Although we may hate ourselves, at the same time we find our self-hatred a kind of occupation. In spite of the fact that we may dislike what we are and find that self-condemnation painful, still we cannot give it up completely. If we begin to give up our self-criticism, then we may feel that we are losing our occupation, as though someone were taking away our job. We would have no further occupation if we were to surrender everything; there would be nothing to hold on to. Self-evaluation and self-criticism are,

basically, neurotic tendencies which derive from our not having enough confidence in ourselves, "confidence" in the sense of seeing what we are, knowing what we are, knowing we can afford to open. We can afford to surrender that raw and rugged neurotic quality of self and step out of fascination, step out of preconceived ideas.

We must surrender our hopes and expectations, as well as our fears, and march directly into disappointment, work with disappointment, go into it and make it our way of life, which is a very hard thing to do. Disappointment is a good sign of basic intelligence. It cannot be compared to anything else: it is so sharp, precise, obvious and direct. If we can open, then we suddenly begin to see that our expectations are irrelevant compared with the reality of the situations we are facing. This automatically brings a feeling disappointment.

Disappointment is the best chariot to use on the path of the dharma. It does not confirm the existence of our ego and its dreams. However, if we are involved with spiritual materialism, if we regard spirituality as a part of our accumulation of learning and virtue, if spirituality becomes a way of building ourselves up, then of course the whole process of surrendering is completely distorted. If we regard spirituality as a way of making ourselves comfortable, then whenever we experience something unpleasant, a disappointment, we try to rationalize it: "Of course this must be an act of wisdom the part of the guru, because I know, I'm quite certain the guru doesn't do harmful things. Guruji is a perfect being and whatever Guruji does is right. Whatever Guruji does is for me, because he is on my side. So I can afford to open. I can safely surrender. I know that I am treading on the right path." Something is not quite right about such an attitude. It is, at best, simple-minded and naive. We are captivated by the awesome, inspiring, dignified and colorful aspect of "Guruji." We dare not contemplate any other way. We develop the conviction that whatever we experience is part of our spiritual development. "I've made it, I have experienced it, I am a self-made person and I know everything, roughly, because I've read books and they confirm my beliefs, my rightness, my ideas. Everything coincides."

We can old back in still another way, not really surrendering because we feel that we are very genteel, sophisticated and dignified people. "Surely we can't give ourselves to this dirty, ordinary street-scene of reality." We have the feeling that every step of the path should be a lotus petal and we develop a logic that interprets whatever happens to us accordingly. If we fall, we create a soft landing which prevents sudden shock. Surrendering does not involve preparing for a soft landing; it means just landing on hard, ordinary ground, on rocky, wild countryside. Once we open ourselves, then we land on what is.

Traditionally, surrendering is symbolized by such practices as prostration, which is the act of falling on the ground in a gesture of surrender. At the same time we open psychologically and surrender completely by identifying ourselves with the lowest of the low, acknowledging our raw and rugged quality. There is nothing that we fear to lose once we identify ourselves with the lowest of the low. By doing so, we prepare ourselves to be an empty vessel, ready to receive the teachings.

In the Buddhist tradition, there is this basic formula: "I take refuge in the Buddha, I take refuge in the dharma, I take refuge in the sangha." I take refuge in the Buddha as the example of surrender, the example of acknowledging negativity as part of our makeup and opening to it. I take refuge in the dharma - dharma, the "law of existence," life as it is. I am willing to open my eyes to the circumstances of life as they are. I am not willing to view them as spiritual or mystical, but I am willing to see the situations of life as they really are. I take refuge in the sangha. "Sangha" means "community of people on the spiritual path," "companions." I am willing to share my experience of the whole environment of life with my fellow pilgrims, my fellow searchers, those who walk with me; but I am not willing to lean on them in order to gain support. I am only willing to walk along with them. There is a very dangerous tendency to lean on one another as we tread the path. If a group of people leans one upon the other, then if one should happen to fall down, everyone falls down. So we do

not lean on anyone else. We just walk with each other, side by side, shoulder to shoulder, working with each other, going with each other. This approach to surrendering, this idea of taking refuge is very profound.

The wrong way to take refuge involves seeking shelter - worshipping mountains, sun gods, moon gods, deities of any kind simply because they would seem to be greater than we. This kind of refuge taking is similar to the response of the little child who says, "If you beat me, I'll tell my mommy," thinking that his mother is a great, archetypically powerful person. If he is attacked, his automatic recourse is to his mother, an invincible and all-knowing, all-powerful personality. The child believes his mother can protect him, in fact that she is the only person who can save him. Taking refuge in a mother or father-principle is truly self-defeating; the refuge-seeker has no real basic strength at all, no true inspiration. He is constantly busy assessing greater and smaller powers. If we are small, then someone greater can crush us. We seek refuge because we cannot afford to be small and without protection. We tend to be apologetic: "I am such a small thing, but I acknowledge your great quality. I would like to worship and join your greatness, so will you please protect me?"

Surrendering is not a question of being low and stupid, nor wanting to be elevated and profound. It has nothing to do with levels and evaluation. Instead, we surrender because we would like to communicate with the world "as it is." We do not have to classify ourselves as learners or ignorant people. We know where we stand, therefore we make the gesture of surrendering, of opening , which means communication, link, direct communication with the object of our surrendering. We are not embarrassed about our rich collection of raw, rugged, beautiful and clean qualities. We present everything to the object of our surrendering. The basic act of surrender does not involve the worship of an external power. Rather it means working together with inspiration, so that one becomes an open vessel into which knowledge can be poured.

Thus openness and surrendering are the necessary preparation

for working with a spiritual friend. We acknowledge our fundamental richness rather than bemoan the imagine poverty of our being. We know we are worthy to receive the teachings, worthy of relating ourselves to wealth of the opportunities for learning.

...

Camping (A family camping trip takes a turn for the better)
byTryAnything©

Al was looking forward to leaving on their camping trip as he packed the RV. He and Erin ha
decent vacation in years. And they had always dreamed of driving around the west and seei
all of the wonders of the desert. Even though their daughter Sue was coming along as well a
Robert, Al was determined to have as much fun with Erin as if they were by themselves. Lat
been falling into a routine and Al was determined that the romance and spontaneity of their
reappear.

Erin was so beautiful to Al. She was only 5'2", but she had one of the most sensuous bodies
Her figure of 36-24-36 was just perfect, and with her long red hair hanging down almost to h
bright green eyes, well, she turned heads everywhere they went, even though she was 33 y
exercised regularly and was careful about what she ate, so her body was firm and toned. Ev
barely sagged, despite having had Sue 18 years ago.

That Robert was coming along was a sudden, last-minute thing. His sister June had called a
please take Robert with them, as she was having some problems with her husband and nee
sort things out. She promised to meet them at Zion National Park a week later, but she need
with Bert and try to figure out what to do with her life.

Robert was a good kid, already 18 years old. He was a star athlete at school and was alread
feet tall. With his broad shoulders and blonde hair with blue eyes, it was easy to see why Ju
gushing over him. He didn't act like he was anything special and seemed to really get along

Now Sue, she looked just like her mother, just a younger version. She was developing into a
young woman and had been dating different boys for the last six months with his and Erin's

Al wondered how they were going to all get along in the RV for their trip. It wasn't small, but
large either. There was one master bunk which he expected to use with Erin. There was also
that converted after taking down the table and sliding some boards and cushions. He guesse
would share that. Since there were no dividers in the RV, everyone was always visible to ev
hoped his lovemaking with Erin wouldn't wake Sue and Robert, because he wasn't about to

Erin and Sue and Robert now came out of the house carrying the last of their personal thing
into the RV. After one last double-check, they locked the house and pulled away, headed firs
Mountain National Park to camp for a day or two. They headed out of Denver up 31 to Boulc
Estes Park. Then entered the park there and found the campsite they had reserved months

Basin camping area. They parked the RV and got out to take in the view of Long's Peak tow
more than 14,400 feet. Robert said that he wanted to go for a short hike and Sue said she w
Al told them to be careful and they said they'd be back in an hour or two.

As soon as they were out of site Al was in the RV where Erin was straightening some of thei
over behind her, Al slipped his arms around her and held her close to him, nuzzling in her ha
as he held her close.

"I can't believe we're finally on the road and alone," Al said as he nibbled Erin's ear. "It feels

"Well, we're not really alone, are we?" Erin replied, arching back against him as he kissed he
Robert and Sue."

"Yeah, but they're not here now, are they?" Al asked, letting his hands slide up to cup Erin's
hands. "And they won't be back for a couple of hours either."

"And what did you have in mind?" Erin asked, sighing as Al's fingers captured her nipples, p
through the thin material of her shirt.

"Well, I can think of a couple of things already," he laughed, feeling Erin's nipples get hard b
fingers.

"Mmmm," Erin sighed as the sensation in her nipples traveled straight to her pussy.

Al always knew how to turn her on, even though they hadn't really been turning each other o
abandoning her tits, Al's hands slid down and grabbed the bottom of Erin's shirt and lifted it o
releasing her tits. Turning her around, he bent over and took one of her hardened nipples int
teasing it with his tongue as he sucked on it. Erin let her head fall back as Al sucked on her
his head in her hands. She felt him unzipping her jeans and inching them down over her hip
the floor, leaving her standing in only her panties.

Al gently stroked her pussy through the thin material of her panties and Erin knew that her p
soaking wet. Suddenly Al grabbed her panties from the front and ripped them off of her, tear
shocked. He had never done anything like that before. She stared at him as he grinned at he
between her legs to cup her pussy.

"I don't want you to wear any panties for the rest of the trip," he said.

"Why?" Erin asked, giggling. "What's the difference?"

"Just because," Al replied. "Okay?"

"If you want," Erin laughed. "But no underwear for you either then," she said, "starting now."

And she reached down and undid his jeans, dropping to her knees to pull them down along
freeing his cock which swung out to stand at attention, pointing right at her face.

"Now that's what I call friendly," she said, opening her mouth and letting him slide his cock i
taste so good," she mumbled from around his cock as she began to suck on it.

"Oh, yeah, that's nice," Al said, his hand resting on Erin's head. "Yeah, like that," he said as
her throat and let all eight inches of his cock slide down into her throat.

Erin could suck cock like no other woman he had ever known. And she always seemed to li
hesitated to suck him when he stuck his cock in her face and she sure wasn't hesitating now
her continue much longer he would be blowing a load right into her mouth, and he had other

Gently lifting her to her feet, his cock sliding from her mouth, Al lifted her up and sat her on t
gently pushing her until she sagged back against the rear window. Anyone walking by could
seen what was going on and that thought excited Al even more as he lifted Erin's feet and s
of the table, exposing her bald pussy to his gaze. Erin had only the smallest thatch of fiery re
her slit which was now split open, revealing her inner pussy lips and her clit, which stuck out
strawberry nubbin begging to be picked.

Dropping to his knees, Al trailed his tongue up Erin's inner thigh, stopping just short of her p
moved over to the other leg and did the same. As he got close to her pussy he could smell t
her excitement. Then slowly Al dragged his tongue up through Erin's pussy, tasting the juice
it. Erin groaned as she felt Al's tongue in her pussy, and lifted her hips to try to meet him. Sh
when he plunged his tongue into her hole, and did have an orgasm when he gripped her clit
teased it with his tongue. When he finished sucking up all of her cum, he got to his feet, his
the entrance to her pussy.

"Well, what do you want?" he asked, gently rubbing the head of his cock up and down betwe

"Fuck me," Erin begged, lifting her hips. "Fuck me, Al," she begged.

"Are you sure" Al asked, starting to insert his cock into her pussy then pulling it back out.

"I'm sure," Erin almost cried. "Fuck me, Al. I need to feel your cock inside of me right now."

"But what if Robert and Sue come back?" Al asked, again slipping his cock just an inch or so
pussy.

"I don't care," Erin cried out. "Just fuck me, please."

"Like this?" Al asked, sliding his cock all the way into Erin's pussy in one stoke.

"Oh, god, yes," she cried. "Oh, god, fuck me," she cried as Al began to stroked his cock in a
pussy. "Yes, it feels so good," she panted, lifting her hips to meet his thrusts.

Al loved the feel of Erin's pussy gripping his cock. With her pussy lips shaved bare, it was ea
his cock slid in and out of her pussy, her inner lips gripping the shaft of his cock as it slid in a
could see her clit peeking out from between her pussy lips and reached down and began to
as he continued to pump his cock in and out of her pussy.

Erin was panting now, pinching and twisting her own nipples as Al continued to fuck her. Sh
how good it felt as his cock continued to pound her pussy. Then Al suddenly withdrew his co
and encouraged her to turn over on her hands and knees on the table, her ass lifted up in fr
pussy spread wide. Her inner lips were gaping open from his fucking and he easily slid his c
driving it deep. Erin collapsed forward onto the table resting her head on her arms as Al con
her doggy style. She loved how deep his cock penetrated when he took her in this position a
match his rhythm as he fucked her. She lay there with her eyes closed enjoying the rhythm o
thoroughly fucked.

After what seemed like hours, even though it had only been about 30 minutes, Al felt like he
back any longer and knew he was going to cum. Erin felt the urgency of his strokes and kne
was imminent. She reached back between her legs and began to rub her clit, wanting to cum
his orgasm built past the point of no return and Erin felt his cock swell even bigger inside of
before his balls exploded and cum shot deep into her pussy.

Erin groaned as she felt his cum splashing deep inside her pussy, furiously rubbing her clit a
shook her. Al was groaning as he buried his cock deep inside Erin's pussy, shot after shot o
her. Erin gasped and lifted her head from her arms, arching her back as the last of Al's cum
Her mouth hanging open in ecstasy, Erin slowly opened her eyes, coming to focus on Sue a

there outside the RV looking in, watching, their eyes wide and big smiles on their faces.

"Oh, god," Erin cried, trying to hide her face in her arms again. "Robert and Sue are watchin
to Al. "They've seen us."

"So what," Al grunted, feeling the last of his cum drip from his cock inside of Erin. "They hav
we fuck. I mean, we have been married for over 15 years now."

"But they watched us," Erin cried. "Doesn't that bother you?"

"Actually, it's sort of exciting," Al said, feeling his cock stirring inside of Erin's pussy.

"Let me up," Erin cried, struggling.

"Okay," Al said, sliding his cock out of her pussy. "Here," he said, reaching around her and p
upright, cupping her tits in his hands.

Then he could see Robert and Sue standing there watching, not making any attempt to hide
see Robert staring at him and for some reason he grinned, pinching Erin's nipples between
pulling on them before Erin managed to struggle off the table and onto her feet.

"God, I'm so embarrassed," she said, reaching for her clothes. "And look at my panties. The

"But we agreed no more underwear for the duration," Al reminded her. "You don't need any

"I'm full of your cum" Erin laughed. "It'll soak my jeans."

"Then wear one of your skirts," Al laughed. "That way it'll just drip onto the ground."

"Oh, you," Erin laughed, quickly searching through her things for a skirt. She found one, a m
summery wrap-around skirt. Wrapping it around herself as Al pulled his jeans on, she burst

"What are we going to say to them?" she asked.

"I've already figured that out," Al replied. "Come on, let's go outside and get this over with."

Trying not to laugh or blush, Erin followed Al out of the RV to where Robert and Sue were st
cheeks red with embarrassment.

"You didn't have to watch, you know," Erin said, unable to contain herself.

"Oh, but I did," Robert replied. "You're beautiful. And if you didn't want anyone watching, wh
window where anyone can see?"

"Well, as you can see, privacy and space are going to be in short supply on this trip," Al saic
just have to be considerate and try to give each other the space we need. Any problems wit

"No, sir," Robert said.

"No, Daddy," Sue said, a smile on her face.

"I think I'll go take a shower," Erin said, trying not to blush. "Sue, you want to come with me?

"Sure, I could use a shower," Sue replied.

Al and Robert watched as the two of them walked to the showers, which were down the roa
they disappeared from view, Al turned to look at Robert.

"Well, Robert, you didn't seem to mind watching me and Erin, did you?"

"Not really," Robert replied. "She sure is beautiful. And seeing her like that."

"Got you excited a bit, huh?" Al asked.

"Yeah, you could say that," Robert agreed with a nervous laugh.

"Did Sue seem upset to you?" he asked.

"No, I don't think so," Robert answered. "I think maybe it excited her too."

"Why do you say that?" Al asked.

"I don't know. She was breathing kind of fast, I guess."

* * * * *

Erin didn't know quite what to say to Sue as they walked to the showers. To her knowledge
her and Al making love before. She knew she was at that age where her hormones were ma
demands on her young woman's body and she didn't want her to have gotten the wrong idea
relief Sue spoke up first.

"Mom, I didn't mean to spy on you and Dad," she said. "We just came back from our walk ar
impossible not to see you."

"But you didn't just turn away, did you?" Erin asked. "That would have been the polite thing t
think?"

"Probably," Sue admitted. "And I'm sorry. But it was so -- so -- so beautiful," she said. "The l
face was so incredible."

"Really?" Erin replied, blushing. "What do you mean?

"You just seemed so happy," Sue said, "sort of beyond words."

"That's a good description," Erin admitted as they got to the showers. "Your father makes m
It's one of the reasons I love him so much."

"It makes me glad that you're my parents," Sue said.

"And you know how much we love you," Erin said, unwrapping her skirt. "We wouldn't want t
you."

"I know," Sue said. "And I --"

She broke off in mid-sentence as Erin dropped her skirt onto the bench, seeing her mother s
from the waist down.

"Mom, you're not wearing any panties," Sue exclaimed.

"Well, I did get dressed in a hurry," Erin explained with a blush.

"What's that on your leg?" Sue asked, looking at her mother and speaking before realizing th
shaved.

"Oh," Erin gasped, blushing furiously as she realized that a stream of Al's cum had dribbled
and run down the inside of her leg.

"You shave yourself there?" Sue asked, incredulous.

"Your father likes it like that," Erin explained, furious that she had forgotten, embarrassed at
explain herself to her daughter. "And it's none of your business, young lady. Just take your s
said, stepping into the shower and turning on the water.

She watched out of the corner of her eye as Sue undressed, admiring how her body had blo
year. Why, her breasts were almost as large as hers, and her hips a bit narrower. All in all, s
sexy, Erin thought as Sue stepped into the shower.

They finished showering and walked back up to the campsite where Al and Robert had begu
They ate, enjoying the taste of the food in the open air with the Rockies looming over them,
even in the middle of summer at this altitude. After dinner, Robert and Sue volunteered to w
while Al and Erin straightened up the camp. As they walked down to the wash stand, Sue as
question.

"What did my father say to you when we went to take a shower?"

"He wanted to know if it turned us on to see them," he replied.

"Really!" Sue exclaimed. "And what did you tell him?"

"I told him that it turned me on and that I thought it turned you on," he replied.

"Why did you tell him that?" Sue asked, feeling her cheeks flame as she recalled how wet it
between the legs as she watched them.

"Because it was the truth," Robert replied.

"Why do you say that?" Sue asked.

"Your breathing really got fast and shallow," Robert explained. "You would have had to have
be turned on."

"Well, that's true at least," Sue admitted. "It turned you on too?" she asked.

"Sure it did. Your mom is really beautiful. You're lucky, you look just like her."

"You think so?" Sue asked, inwardly pleased to be compared so favorably to her mother.

"Yes," Robert replied. "I don't see much difference at all."

"Well, I saw one," Sue said before she could catch herself.

"What do you mean?" Robert asked, realizing that she hadn't meant to let it slip.

"Oh, nothing really," Sue stammered, embarrassed.

"Come on, I told you what you wanted to know," Robert insisted. "The least you can do is tel
difference is between you that you know of."

"Well, if you must know," she said, really blushing now as they got to the wash stand, "she s

"So do you," Robert said, reaching down and running his hand up her leg from her calf to he

"No, not her legs," Sue said, laughing nervously as his hand on her leg made her tingle.

"What then?" he asked.

"She shaves her pussy," Sue said quickly, turning on the water and beginning to wash the d

"Really!" Robert replied. "You don't?"

"No, of course I don't," Sue snorted in disbelief.

"I'd like to see that," Robert mused. "I've never seen a shaved pussy before."

"You've seen -- you know, pussies before?" Sue asked, a little surprised.

"Yeah," Robert replied nonchalantly.

"Really!" Sue said, curious. "Whose? Your girlfriend's"

"Once a girlfriend's," Robert admitted.

"Any more than that?" Sue asked, her curiosity peaked.

"Yeah," Robert said.

"Well, are you going to tell me or not?" Sue asked, getting angry.

"What will you tell me if I do," Robert asked. "This is sort of a one-way exchange so far."

"Well, what do you want to know?" Sue asked, jumping as she splashed herself with water.

"Are you a virgin?" Robert asked disarmingly.

"Well, you don't just get right down to it, do you?" Sue replied. "And if I tell you you'll tell me?

"Sure," Robert agreed.

"Okay," Sue said, "I'm a virgin. Does that make you happy?"

"I don't have anything against virgins," Robert said with a laugh, noticing that her nipples we
visible through her wet shirt.

"So, whose pussy did you see?" Sue persisted.

"My mom's," Robert replied, smiling at her.

"You're kidding!" Sue said, staring at him, her nipples hard. "How?"

"Well, when she and dad aren't fighting, they're usually fucking. And they fuck everywhere ir
doesn't seem to matter to them. I've seen them fucking dozens of times."

"Wow!" Sue exclaimed. "Today was the first time I ever saw my parents. Or anyone for that

"Did it turn you on?" Robert asked.

"Like you said, I'm not dead," Sue laughed.

"No, I can see that," Robert said with a smile, staring at her tits.

"Oh," Sue said, looking down and realizing that her hard nipples were sticking out from her s
aureolas clearly visible.

Blushing, she tugged at her shirt.

"You're embarrassing me," she said.

"I don't mean to," Robert assured her. "I can't believe that I have such a beautiful cousin."

"You think so?" Sue asked, blushing at the compliment.

"Like I said, I think you look like your mom."

"Oh, my ti -- I'm not that --"

"I think you are," Robert said. "But I can't be sure through that shirt, even though it's wet."

"What, you want me to show you my tits?" Sue asked, covering herself with her hands, feeli
even harder under her hands.

"Only if you want to know if I think they're as nice as your mom's," Robert replied.

"And if I do?" Sue asked, not believing what she was hearing.

"I'll show you mine if you like," he replied.

"What, your tits? You want to show me your tits?" she laughed.

"No, I'll show you my cock," Robert said smoothly.

"Really!" Sue exclaimed. "And what makes you think I want to see that?" she asked.

"You didn't, but now you do," Robert said with a laugh. "Admit it."

"You're so bad," Sue laughed, piling the dishes up. "And where would you do it, here?"

"I don't care," Robert laughed. "But we'd better go into the bathroom and hide in one of the s
don't get caught."

"You mean it, don't you?" Sue asked, staring at him.

"Sure," Robert said. "Why not? It'll be fun and it'll be our secret."

"You'd really..."

"I'll even go first if you don't believe me," Robert assured her. "But we'd better hurry. They'll
where we are soon. What do you say?"

"Okay," Sue agreed suddenly, not believing herself. "Where?"

"Come on," Robert said, grabbing her by the hand and dragging her into the nearest restroo
the women's.

Dragging her into a stall, he shut the door behind them. They were squeezed together in the
hand's width between them.

"You want me to go first?" Robert asked.

"No, I will," Sue replied with a giggle.

"Then I'll sit here," he said, pulling down the seat lid and sitting down. "Go ahead."

"What should I do?" Sue asked, suddenly shy.

"Just take your shirt off," Robert suggested. "That'd be the easiest, I think."

"Okay, here goes," Sue said, taking a deep breath and reaching down and pulling her shirt u
head.

She stood there with her arms at her sides, her tits heaving as Robert stared at them. She lo
that her nipples were bigger and harder than they had ever been, standing upright on the en

"Stand closer," Robert said as he stared at her.

Sue inched forward until her knees hit the edge of the seat, stopping there, her tits just inche
Robert's face.

"I think you might be even more beautiful than your mom," Robert breathed, reaching up and
his hands, feeling her nipples hard in his palms.

"Oh," Sue gasped, but didn't pull away. "What are you doing?"

"Seeing if they feel as good as they look," Robert replied, kneading her tits and pinching her
nipples between his fingers. "And how they taste," he said, leaning forward and capturing a
mouth, sucking on it.

Sue groaned as she felt Robert's mouth fasten on her nipple. It was unlike any feeling she h
experienced before. She could feel herself getting wet between the legs as Robert continued
tits and knead them with his hands. She stood there for several minutes as he sucked on he
pulling reluctantly away.

"It's your turn now," she said weakly, her face flushed with excitement.

"Okay," he said, smiling up at her. "You sit here."

As Sue sat on the seat lid, Robert stood right in front of her, his legs right up against the sea
his pants, he slowly slid them down to his knees, leaving him in only his briefs, his hard cock
of them. Sue's eyes were wide as she stared at his cock bulging inside his briefs. She had n
before. Then as Sue stared, her mouth hanging open, Robert hooked his fingers inside the w
briefs. Quickly pulling them out and down, he freed his cock, which sprang to attention, almo
the face. As she gasped and tried to avoid being hit in the face, Robert leaned forward, slidi
his cock into her open mouth.

For just a few seconds Sue reflexively closed her mouth around his cock before opening it a
away from him. But she had tasted his cock and she knew that she had liked the taste. It wa
little salty, but the softness of it was what she liked the most.

"Don't stop," Robert said. "That feels great."

"But -- but --" Sue stammered as Robert again leaned forward, sliding the head of his cock p
lips.

This time she did not immediately pull away from him. She closed her lips around his cock, l explore the head of his cock, tasting the pre-cum that had formed at the slit. She felt Robert cock into her mouth, so she relaxed the grip of her lips, allowing him to slide even more of h mouth. She was amazed at how big it was, filling her mouth. When it hit the back of her thro to choke and Robert pulled back, letting her catch her breath.

"That felt great," he said. "Did you like it?"

"It was different, but nice," Sue said, licking her lips. "But it made me choke when you pushe far."

"You'll learn how to do it so it won't choke you," Robert said. "Do you want to do it some mor

"Well --"

"If you do, I'll do it to you," Robert said.

"What?" Sue asked.

"I'll suck your pussy," Robert said. "If you can make me cum, I'll suck your pussy until you cu sound?"

"I've never done anything like that," Sue said breathily, her eyes wide but her hand still wrap Robert's throbbing cock.

"Just keep doing what you were doing," Robert said, "and I'll cum. I was getting close anywa

"You were?" Sue asked, staring at his cock in front of her. She could see some more pre- cu end. "I guess I could try," she said, sticking out her tongue and licking the tip of Robert's coc the droplet that had formed there. "Is that what cum tastes like?" she asked.

"Yes," Robert replied as she opened her mouth and let him again slide his cock in. This time for it and she sucked on him, letting her tongue slide all around it, tasting it, feeling its textur Robert began to slide his cock in and out of Sue's mouth. He was only able to get about half into her mouth, but her tongue was doing an incredible job arousing him. He knew he wasn't control himself much longer and stopped sliding his cock in and out, letting Sue do the work

Then he felt a churning in his balls and Sue felt his cock improbably swell even larger in her

one hand in her hair behind her head, Robert groaned as he felt his balls pump and a strear shooting out the end of his cock into Sue's unsuspecting mouth. She gulped in surprise, swa two spurts, then continued to suck on him as his balls pumped and pumped, filling her mout again, each time Sue gulping as she swallowed.

Finally Sue had sucked all of the cum that his balls would offer, forgetting where she was, so she with the taste of his cock in her mouth. Even with her still sucking on him, Robert felt his shrinking and he stepped back, his cock dangling in front of him while Sue licked her lips. He and bright and her lips were slightly flushed from her efforts.

"That was unreal," Robert said, his hand moving from the back of her head to stroke her che incredible cousin."

Sue blushed as she looked up at her hunk of a cousin, unable to believe that she had just su the women's room of their campsite. She felt a thrill between her legs as she remembered w like when it swelled and then exploded in her mouth, filling it with his salty tasting cum.

"It's your turn now," Robert said, letting his hand slide down off of her face to cup her tit, pinc hard pointed nipple as he released her. "Let's trade places," he said, taking her hand and he feet.

She could feel his cock pressing against her belly as they stood face to face, and he surpris down and kissing her very gently, his tongue lightly probing into her mouth to touch hers. Th down on the lid again and she was standing in front of him.

"Can I help you?" he asked, reaching out for the clasp on her jeans.

"No, I'll do it," she said, her hands going down to cover her front. "I'm just a little nervous is a said.

"I can't wait to taste your pussy," Robert said. "Just thinking of it makes me want to cum aga

And indeed as Sue looked down his cock had once again grown to its full size, standing up i Robert was slowly massaging himself as he looked at her, her tits heaving with excitement. her jeans, sliding the zipper down and slowly wriggling them down over her hips, pushing the floor and stepping out of them.

As she stood there in front of him, Robert could see that her panties were soaked and were

her pussy, molding to her pussy lips. He licked his lips in anticipation as Sue hooked her thu
waistband of her panties and pushed them down to the floor, stepping out of them and stand
of him. She didn't know what to do with her hands as she resisted the impulse to cover hers

"You are so beautiful," Robert said, reaching out and caressing her hip, letting his hand slide
her ass cheek.

Reaching around her with his other hand, Robert cupped her cheeks in his hands and pulled
her stomach as he squeezed her ass. Slowly he slid his hands down and into the crack of he
asshole tightly puckered before sliding his hands down to her thighs. Gently pulling, he enco
widen her stance, opening her legs and giving him access to her pussy.

Sue sighed, letting her arms go around Robert's head as he continued to lick and kiss her st
teasing her belly button as his hands slid up her thighs. She gasped when she felt his hand
finger lying between her pussy lips gently rubbing her clit. She felt him slip a finger between
gently probe at the entrance to her hole, pushing it in a bit before withdrawing it. Then he ha
a step, bringing his finger up to his mouth and sucking on it. She watched him with her breat
couldn't believe this was happening to her.

"Mmm, nice," Robert said as he sucked on his finger. "You ever tasted yourself?" he asked.

"No," Sue said softly, shaking her head.

"You will," he said, slipping off the seat so sit on the floor in front of her. "Come here," he sai
up to cup her ass again and pull her towards him.

When he had her positioned so that her pussy was right above him, he slid his hands down
using the fingers of each hand to pry her pussy lips open as far as possible. Sue felt so total
this. She couldn't make up her mind whether she was more embarrassed or turned on by it.
when she felt Robert's tongue slide through her pussy. She thought she would die it felt so g
almost buckled when she felt his tongue probe up into her hole. Her knees were trembling b
up to her clit, sucking it into his mouth and teasing it with his tongue. She felt a wave of whit
through her body and then she was uncontrollably trembling as she came.

Robert was eagerly sucking on the sweetest pussy he had ever encountered. He couldn't be
was. And then when she came and flooded his mouth with her virgin nectar, Robert's cock e
shooting cum up into the air as me munched on her muffin. She was softly whimpering when
up all of the juices that had poured from her pussy. Giving her pussy one last long lick, Robe

his feet, taking Sue's naked body in his arms and kissing her, their tongues swirling togethe

"How was that?" he asked softly as they broke their kiss.

"I thought I was going to die," Sue said, holding him tightly.

"Do you like the taste of yourself?" he asked, kissing her again.

"Yes," Sue said. "It tastes nice."

"I think so too," he said, a hand sliding down between their bodies to worm a finger up into h think you taste great," he said, bringing his finger up and licking it as she gasped. "You try it suggested, gently taking her hand and leading it down between their bodies.

Blushing, Sue put her fingers into her pussy, feeling it like she never had before. She slippe herself, enjoying the sensation, then brought it up to her mouth. Smiling at him, she opened inserted her finger, sucking on it. When she removed it from her mouth, all of the sticky shee smile was on her face.

"That does taste nice," she said. "I'm surprised."

"Why?" Robert asked. "Men love to eat pussy for a reason."

"Oh, god, Mom and Dad," she said. "They'll be wondering where we were."

"We're giving them some space, remember," Robert said with a laugh. "But we should get b looking for us."

Sue was giggling as they struggled into their clothes in the small stall. Finally they finished a the door before leaving, not wanting to be seen. They grabbed the clean dishes and headed

"Where have you two been?" Erin asked when they arrived.

"Washing the dishes," Sue answered innocently.

"The whole time?" Erin asked incredulously.

"Well, you did say something about space," Robert said, "so we sat and talked so you could

Did we do wrong?"

"No, of course not," Erin replied, blushing as she realized what they were saying. "I was just
all."

"We're fine, Mom," Sue said, smiling at her. "This is going to be fun, isn't it?"

"I sure hope so, Sue," she said, smiling at her.

They spent the next couple of hours sitting around a fire that Al built, enjoying the heat as th
fell rapidly around them. Both Erin and Sue's nipples were standing out from the cool night a
Erin were drinking Jack Daniels and getting quite a buzz. At one point Robert leaned over to
into the fire and he found himself looking right up Erin's skirt as she turned and nuzzled Al. H
believe that he was looking at her bald pussy not three feet from his face. The thought he co
glistening from the firelight but he couldn't be sure. When he resumed his seat, he leaned ov
into Sue's ear what he had seen. She smiled at him and whispered back that she knew, surp
said that she wanted to go to bed.

"Well, I guess the way to do it," Al said, "is for either Robert and I to go change and get in be
for you two to do it. Whatever you two want," he said.

"Well, I don't want to undress while the two of you are laying there watching," Erin laughed, "
But we'll go first. Come on, Sue," she said, getting to her feet.

Sue followed her mother into the RV, shutting the door behind her. As soon as the door clos
her skirt and pulled her shirt up over her head, climbing naked into the master bunk.

"Mom!" Sue exclaimed. "What if you have to go to the bathroom?"

"Well, I'm sure the two of you will be asleep," she replied. "If not, just pretend you are," she l
think I really feel that Jack Daniels for some reason."

"Well, we're up in altitude and that's supposed to make it stronger," Sue said, remembering
learned in school that year.

"It sure does," Erin replied as they heard Al call out that they were coming in.

Sue quickly pulled her jeans off, climbing into the bunk she was supposed to share with Rob

shirt and panties just as the door opened and her father and Robert came in. She wanted to
but she turned her back on them, facing the wall, and listened as they undressed. She heard
up into the bunk with her mother as she felt Robert standing next to their bunk.

"I'll climb over you and sleep next to the wall," Robert said. "That way you won't have to clim
you need to go to the bathroom during the night."

"Okay," Sue said, feeling him crawl over her and stretch out against the wall.

She turned over, putting her back to him, and noticed that her mother was also facing her fro
smiled at each other before Erin reached out and switched off the light, plunging the RV into
lay there unable to sleep, listening to the other three and the night sounds. After drifting off t
a few minutes, Sue awakened to a sound, realizing that it came from the bunk where her pa

She cracked an eye just enough to be able to see, trying in the dim light to see what was go
RV. As her eyes adjusted she could see that her mother's back was to her and that she had
her father. Her bare back and naked ass gleamed slightly in the moon and starlight.

As she lay there watching she heard Robert's voice softly in her ear.

"Can you see if they're fucking?" he asked.

She shook her head no, surprised that he was awake and could see that something was hap
there she felt Robert softly slide a hand up under her shirt and cup a breast. It felt so good a
rolling her nipple between his fingers. As she watched her mother, Sue became aware of mo
that it was her father's cock moving in and out between her mother's legs. She could only se
Erin had one leg hooked over her father, opening her up to both his cock and Sue's gaze.

She felt Robert shift behind her as he pressed his body against hers. She could feel his hard
into her as he fitted himself to her like a spoon. She felt his other hand slide down her body i
panties, cupping her pussy. She shifted her legs to allow him to play with her pussy, watchin
cock sliding in and out of her mother. Her pussy was getting very wet as a result of Robert's
there. Then she heard his voice very softly in her ear again.

"Go to the bathroom and take your panties off," he whispered. "When you come back, lay th

Sue was puzzled by the last instruction and amazed by the first. Did he think she was going
her parents were fucking in their bunk? And take off her panties. What if her mother saw her

back in? But the thought thrilled her as Robert's fingers stayed busy in her pussy and on her
realized that if they heard her get up that they would stop moving. Maybe she'd actually be a
something as she went out the door.

Taking a deep breath, Sue made a little noise as she got up to sort of warn her parents. Mak
door she realized that either they hadn't heard her or they didn't care, because she could no
father's cock sliding in and out of her mother's pussy. She actually stood there for several se
before she realized that they might suddenly catch her. She opened the door to the head an
her. She actually did need to pee, so she pulled her panties off and peed, carefully wiping he
afterwards but not putting her panties back on. She felt so wicked as she carefully opened th
out.

They were still coupled but they had stopped moving. She didn't know whether that was bec
her or not. Slipping out the door she looked carefully at her parents to make sure that they w
see her. As she did so she saw some white fluid seeping out of her mother's pussy from aro
cock. She realized that he had cum inside of her and some of it was leaking out. The though
she felt herself get instantly wet between her own legs.

She quickly scooted back to her bunk, remembering at the last second Robert's instructions
bunk in the opposite direction, her head next to his feet. She lay there for several minutes, le
breathing normalize and listening for any sounds from her parents' bunk. She was just starti
sleep when she felt Robert's hand on her hip, gently pulling her to lay on her side with her ba
parents.

Turning, she found herself with Robert's cock in her face. She almost laughed out loud at the
parents seeing her like this as she opened her mouth and closed it around his cock. As she
flood with juices as she began to silently suck on Robert's cock, she felt him lift her leg at the
then felt his mouth on her pussy. She couldn't believe they were sucking on each other not t
her parents. She hoped they wouldn't be able to see anything if they woke up and looked ov

Her body was on fire as Robert sucked her pussy while she sucked his cock. This was so m
feeling of his tongue in her pussy and she loved the taste of his cock in her mouth. She didn
they had been sucking on each other when she felt Robert's cock swell in her mouth and sh
be cumming any second. As his cock started pumping hot sticky cum into her mouth her ow
her. She almost cried out from around his cock as she felt his tongue slide up into her hole a
her cum.

She fell asleep with Robert's cock still in her mouth, not waking up until early the next morni

cock started swelling in her mouth. She was momentarily disoriented as she instinctively beg
cock, but quickly remembered where she was and also who else was there with them. Relea
slowly turned over so that she was facing towards her parents. They appeared to be asleep,
back to her.

Quietly slipping from the bunk, Sue tiptoed into the head to relieve herself. When she finishe
searched through her clothes for something to wear. Hearing her parents stirring, she grabb
her hands found, a short skirt, and quickly stepped into it, pulling it up and covering herself ju
mother woke up.

"Hi there, earlybird," Erin said to Sue when she saw her. "Did you sleep okay?"

"Just great, Mom," Sue replied. "How about you?"

"Just dreamy," Erin agreed. "But I need to pee. Is Robert awake?"

"I don't think so," Sue said.

"Good," Erin nodded. "I can go then."

She sat up, turning so that she was facing Sue, her legs spread. Sue could see dried cum o
lips and Erin realized what she was looking at.

"We didn't wake you, did we?" she asked, smiling at Sue.

"No, of course not," she stammered, turning away.

"Good morning!" Robert said, sitting up and staring at Erin sitting with her legs spread. "Brea

"Only if you like cream danish," Erin laughed, sliding off the bunk and going into the head.

"I could manage," Robert laughed as the door closed behind her.

"I'm going for a walk," Sue said, opening the door to the RV.

"See you in a bit," Robert said. "Thanks for the wake-up."

"My pleasure," Sue said, her face flushing. "I feel fine too," she said, lifting her skirt and flash

unclad pussy at him.

As she stepped out of the RV Erin exited from the head.

"My turn," Robert said, getting out of the bunk, his cock dangling in front of him.

"Me or the head?" Erin asked, staring at his cock.

"Both, I hope," Robert said, letting his hand stroke from her pussy to her tits before he stepp
head and shut the door.

"Al, time to wake up," Erin said, leaning into the bunk to shake her husband.

"What time is it?" he asked, rubbing his eyes.

"Time to get up," Erin replied, reaching under the covers and grabbing his cock. "Come here
wake up," she said, tugging on his cock.

"Where are Sue and Robert?" he asked.

"Sue went to take a walk and Robert's in the head," she said. "It's okay."

"If you say so," Al said, sliding over to the edge of the bunk and letting his feet hang over the

"I say so," Erin said, bending forward and sucking his cum-encrusted cock into her mouth. "I
us."

"Mmm, what a great way to start the day," Al said as his cock grew hard in Erin's mouth.

"That's better," Erin said, continuing to stroke his cock with her hand. "Now let's put this to s
use," she said.

"What about Robert?" Al asked as Erin climbed up onto the bunk and straddled him, her tits
face.

"We'd better hurry then," she said, reaching down between her legs and grasping his cock, g
her pussy lips and to the entrance to her hole.

Pressing steadily downward, Sue began to lower herself onto Al's cock until it had entirely di
her pussy. Holding it right there for a moment while she kissed Al, Sue then began to raise a
hips, sliding her pussy up and down Al's hard shaft as she fucked him. At first slowly, then sl
it as fast as she could, trying to make him cum.

Now, Robert had heard this whole exchange from within the head. He had stayed in there lis
decided that he had heard enough. Quietly opening the door to the head, he exited, seeing t
ass moving up and down, Al's cock appearing and disappearing into her wide open pussy. H
door to the head and went back to his bunk, sitting on the edge where he could best watch t

Sue's actions were having their desired affect on Al and he began to groan as he felt his bal
explode. Suddenly Robert saw her lift her pussy up off of Al's cock, her inner lips gaping ope
around and plant her pussy on Al's face. When she saw him she hesitated for a moment, the
lowered her mouth onto Al's glistening cock, her eyes never breaking contact with him as sh
cock into her mouth. Robert was now masturbating in front of Erin as she began to suck on A
hear Al noisily slurping on Erin's pussy as they sucked each other to orgasm.

Then he heard Al groan and knew that he was cumming in Erin's mouth. Furiously stroking h
began to spurt cum across the RV even as he saw Erin's cheeks billow as Al's cum filled her
the entire process she never broke eye contact with him. He could see a dribble of cum leak
edge of Erin's mouth as her throat convulsed when she swallowed. Robert continued to stro
spurting out, until there was no more. He pulled his shorts on, getting to his feet and staring
she continued to suck Al's cock. Carefully opening the door to the RV, he gave one last look
raised her mouth up off of Al's cock for a moment and smiled at him, cum dripping from her l
exited the RV, carefully closing the door behind him.

Boy, was this going to be some camping trip, he thought to himself as he walked down to the
couldn't believe how hot his Aunt Erin was. And Sue! She was fine. He was sorry his parents
problems, but he was sure glad he had been sent on this trip. His mother had hinted that he
fun than he imagined. He wondered if this is what she had meant.

Meanwhile, Erin had finished sucking Al's cock and had rolled off of him, climbing down off t
on the floor.

"Come on, let's go get a shower and have some real breakfast and get on the road," she sai
and happy and excited.

She had never had sex in front of anyone before, but for some reason she felt like showing o

Robert. He was so gorgeous! She hadn't believed it when she had seen him stand up, his hu
front of him. Then when she felt his hand on her body, she just had to have some and she d
he heard her. That he came out of the head and sat and watched and masturbated at the sa
her more than anything ever had.

She pulled Al out of the bunk and they got dressed enough to go to the showers. When they
showers, Robert and Sue were setting up breakfast.

"Everyone have a good night?" Al asked.

"Great," Robert replied.

"Fine, Dad," Sue replied. "It was better than I thought."

"We'll head over Trail Ridge Road today and camp tonight at Grand Lake on the other side o
Divide. It should be really beautiful," Al explained.

"Sounds great," Robert said.

They finished breakfast and cleaned up. Then Robert and Sue converted their bunk back int
seats as Al and Erin made the RV ready for the road. They broke camp and began their driv
mountains to Grand Lake. They were all quickly caught up in the splendor and beauty of the
crossed the divide at an altitude of more than 14,000 feet. Coming back down the west side
were able to see Grand Lake spread out before them. It was a large lake, not visible from en
found the camping area and were directed to a site right on a babbling brook.

"This is great!" Sue said as she got out of the RV.

"And we have two or three hours until dark," Erin added. "That gives us time to explore."

"I'm going for a hike, that's for sure," Robert said. "I need to stretch my legs."

"I'll come with you," Sue volunteered. "That is if you don't mind."

"Oh, let's go with them," Erin said to Al. "It will be fun."

"I don't feel like it right now," Al said. "I want to check some things and look at the maps and
later."

"But it'll be fun," Erin protested. "You can do all of that later."

"You go with them," Al suggested. "I'm just not into it right now."

"You two mind if I come with you?" Erin asked Robert and Sue.

"Of course not, Mom," Sue laughed. "Let's get started."

Using the map given them when they entered the area, they quickly found a trail that wound
was a beautiful clear day and the air was fresh with the smells of summer. At one point they
some rocks and Robert was treated to a view of both Erin's and Sue's pussies as they climb
As Sue was climbing over he reached out and rubbed his finger in her pussy. When she crie
Erin turned to see if she was okay.

"Did you hurt yourself?" she asked.

"No, I just slipped a little," Sue said, blushing.

She had seen her mother's pussy in front of her and she knew that Robert had also. Then th
trees that had been felled across the trail and they had to climb over them. Sue went first thi
Erin was shocked to see that she wasn't wearing any panties. Just as she realized that if sh
like that, that Robert behind her must be able to also, as well as herself. Just as she was ge
turn and look at Robert and see, she felt his hand on her pussy, a finger rubbing between he
Turning to look at him, she saw he had a grin on his face and was licking his finger. Erin blu
scrambled up over the logs, making sure at the top that she spread her legs wide to give hin
view.

After they had been walking for about an hour they stopped and rested where there were se
boulders on the shore of the lake. They each scrambled up onto a boulder, laying back and
the day's sun on their faces and the cool gentle breeze coming across the lake. When Erin l
realized that she was laying facing towards Robert, that if he looked he would be able to see
Glancing over at Sue she realized that the same was true. In fact, Sue had one foot propped
exposing herself.

Watching Robert, Erin brought both of her feet up to rest on the boulder, keeping them sprea
knowing that if Robert looked over he would be able to see directly into her pussy. Coughing
open his eyes and look at her. She saw his eyes widen as he saw her pussy spread open b

she saw him glance over at Sue, a smile crossing his face when he obviously saw her pussy
propped himself up on his elbows and unabashedly stared at first hers, then Sue's pussy. Er
saw the bulge in his shorts growing as he looked at their pussies. Shocking even herself, Er
between her legs and gently rubbed her clit with a finger while Robert watched her. She ther
into her pussy, sliding it in and out a few times before bringing it up to her mouth and suckin
smiled at her as he began to rub his crotch.

"Isn't this great," Sue said suddenly, sitting up and hugging her knees to her chest. "It's so b
beautiful and peaceful."

"It sure is beautiful," Robert agreed, staring at her pussy.

"Maybe we'd better start back," Erin said, sitting up. "Al will be worrying."

"Sure," Robert said, grinning at her. "We should get back before it gets dark."

"I'd like to sleep right here," Sue said dreamily, getting to her feet.

"Well, come on then," Erin said, getting to her feet and jumping from the boulder to the shore

It took them a little over an hour to get back to the RV and they were all feeling it when they
had already set up dinner and was grilling some chicken when they arrived. It was with grea
sat down when they arrived.

"So, how was it?" Al asked.

"You wouldn't have believed the view," Robert said, smiling at Erin. "It was.....delicious is ho
it. If it was food, I'd eat it."

"That's sure an interesting way of looking at it," Erin said. "It was nice though."

"I loved it," Sue said. "It's so peaceful."

"We should have a great drive tomorrow," Al said as they ate dinner. "If everything goes oka
at Colorado National Monument in Mesa Grande tomorrow night. It's a big bluff overlooking
think it's more than a thousand feet above it."

"That sounds great," Robert said. "I'm really enjoying the scenery. Do you think that we'll sta

than overnight? It might be fun to really have a long hike and camp with sleeping bags once

"Oh, that would be fun!" Sue said. "Can we do that, Dad?"

"I don't see why not," Al agreed. "When we get to a place that you want to spend an extra da
decide then, okay?"

"Great!" Robert said. "Thanks."

"I think I'd like a drink tonight," Erin said. "How about it?"

"Well, sure," Al said. "I'll get the bottle of Jack."

"How about us?" Sue asked, smiling at her mother.

"You do the dishes first, then we'll see about that," Erin replied.

"I'll help you," Robert said. "It's the least I can do."

"Here we are," Al said as he returned with the bottle of Jack Daniels.

"See you in a bit," Robert said as he began to gather up the dishes.

"I think that maybe those two are fooling around a little," Erin said when Robert and Sue hac

"You're kidding!" Al said, taking a big swallow from his drink. "What makes you say that?"

"Have you looked at him objectively?" she asked. "He's what you call a hunk, gorgeous. Anc
too."

"So what?" Al said. "Sue's not like that."

"She's growing up," Erin said. "She's starting to have certain feelings that are new to her anc
experiment. We did."

"I just never thought about it," Al said. "I guess she has grown up, hasn't she?"

"You'd have trouble telling us apart if you were blindfolded," Erin laughed.

"Except for that shaved pussy of yours," Al said, sliding his hand up under her skirt to rub he

Sue and Robert quickly washed up the dishes. Not wanting to return to the RV so quickly, a and Erin probably wanted some time alone, they decided to go for a walk along the lake in t leaving the dishes at the washstand.

"Your mom's not wearing any panties," Robert said as they walked along.

"I know," Sue laughed. "I think it's neat."

"You're not either," Robert said. "And I think that's neat."

"It feels so.....naughty," Sue said. "And it's exciting. I saw your cock get hard when you we my pussy at the lake."

"It looked so tasty," Robert said.

"Why didn't you taste it then?" Sue laughed.

"What do you think your mom would say to that?" Robert laughed. "She'd probably make me

"Would you?" Sue asked. "Suck my mom's pussy?"

"Sure, if you don't mind, of course. She's beautiful. And she shaves her pussy. I'd like to tas pussy."

"I'll shave my pussy," Sue said, lifting her skirt and looking down at herself. "Would you like t

"You bet!" Robert said. "But I'd taste it the way it is right now anyway."

"What, here?" Sue exclaimed, looking around. "Where?"

"Over on that log there," Robert said, pointing.

"Really?" Sue said. "Now?"

"Sure," Robert replied. "Why not?"

"Can I suck yours too?" Sue asked.

"I hope so," Robert laughed. "But I'll go first. I'm thirsty actually."

Laughing Sue ran over to the log Robert had pointed out, sitting down on it and spreading h
Holding her skirt up, her pussy was presented to Robert. Smiling, Robert got down on his kn
tongue directly through her pussy lips, stopping when he got to her clit and running a couple
circles around it, causing Sue to gasp in delight. Then he began to flick his tongue in and ou
drinking up her juices.

Sue sighed, holding Robert's head against her pussy as he continued to eat her. He sucked
on her pussy lips, sucked on her hole, and finally captured her clit lightly between his teeth a
with his tongue, driving her wild. Out of control, she felt her entire body spasm as she came,
convulsing on his tongue as he sucked at her nectar. She couldn't believe how good it felt as
juices.

"Robert, how can anything feel so good?" Sue asked as he continued to lick her pussy.

"Because it tastes so good," Robert explained, sliding his finger up into Sue's tight pussy.

"Ooh, that feels nice," Sue said, squirming on the log.

"Just wait until you feel my cock up there," Robert said, sliding his finger in and out of Sue's

"Are you going to fuck me?" Sue asked, staring at him.

"Only if you want to," Robert replied. "But you can suck my cock for now, if you want to."

"Oh, yes, I'd like that," Sue said, her eyes bright.

"Which one?" Robert laughed.

"Well, both," Sue laughed with him. "But I'll suck you now."

"Here you are," he said, dropping his shorts and pulling his cock out.

Now Sue just grabbed his cock, feeling it in her hand as she squeezed it. With her other han

balls, lifting his cock so that she could examine him in the waning light. Seeing a drop of pre the slit of his cock, Sue stuck out her tongue and licked it, tasting him and then running her t the head of his cock, feeling it jerk in her hand in response.

"This is so nice," Sue said, opening her mouth and letting Robert slide his cock in, not stopp banged up against the back of her throat.

Closing her lips around the shaft, Sue sucked on him, using her tongue to explore and taste Then holding his ass with one hand, Sue began to fuck Robert's cock with her mouth, sliding it. Robert groaned in delight as Sue's entire mouth worked him. She was getting bolder and fit more and more of him in her mouth each time she slid back down on him. Her cheeks we breathed and her nostrils were flared in excitement.

"Yeah, that's great," Robert said, beginning to fuck her mouth on his own. "Keep that up and minute," he said, feeling his cock bang into the back of her throat as he slammed his hips fo

Sue just sucked harder, eager to feel him cum in her mouth again. She let her teeth lightly s of his cock as he fucked her face, her lips slurping at him. She could feel the inevitable abou the tension in his cock changed. It got impossibly harder, then swelled even bigger before ex mouth, thick streams of cum shooting into her throat. Her cheeks puffed out completely as s swallow every bit of it. Even so she could feel some of it slipping out of her mouth around his gulped and gulped. Finally he stopped cumming and Sue finished sucking and swallowing a

"God, that's just so cool," she said, giving the head of his cock one last lick before getting to just love that feeling when you explode in my mouth."

"So do I," Robert agreed, laughing.

"Oh, you," Sue said, hugging him tight. "This is so much fun."

"We'd better get back before they come looking for us," Robert said.

"Oh, you haven't seen mom drinking yet. This could be a very strange night yet. I'm surprise to let her," Sue said.

"Why?" Robert asked.

"You'll see," Sue said, leaning up and kissing him. "I like the taste of me on your mouth," she

"So do I," Robert agreed, laughing as they made their way back down the trail to the campsi
dishes on the way.

When they got there Al and Erin were still sitting where they had left them, but the bottle was

"There you are," Erin said cheerfully, waving her cup at them. "We thought you had left us,"
herself to her feet. "Give me a kiss because you've made it back safely," she said, grabbing
shirt.

"Sure," Robert said, leaning down and giving Erin a safe kiss on the lips.

"No, a real kiss," she insisted, pulling him down and kissing him for real.

Sue's eyes popped as she watched her father laugh at the look on Robert's face as Erin's to
briefly around in his mouth before she let him go.

"You too," Erin said to Sue, putting her arm around her. "My beautiful daughter," she said, ki

Sue was stunned when she felt her mother's tongue force its way between her lips to briefly

"Isn't that strange," Erin said as she released Sue. "Al, when I kissed Robert he tasted like p
kissed Sue, she tasted like cum. Why do you think that is?"

"I wonder," Al said, cracking up with laughter as he saw Sue's and Robert's faces. "I guess y
he said.

"What bet?" Sue asked, still stunned by what had just happened.

"Your mom thought you two might be fooling around, so she bet me," Al explained.

"What was your bet?" Robert asked, smiling at the situation.

"If I was right, and I thought our little girl was still innocent, I'd get a blowjob," he explained, g
at Sue as he realized what he had just said.

"And since you didn't win?" Robert inquired.

"Well, she gets a blowjob," Al laughed. "Isn't that funny. I win no matter what."

"That's right," Erin said. "I win so I get the blowjob."

"Can we have some of that Jack Daniels now?" Robert asked.

"Sure, why not?" Al agreed expansively. "Help yourselves."

Erin stood there watching as Robert poured himself and Sue each a drink of Jack Daniels. T
the table and sat on it facing Al.

"Okay, pay up," she ordered, taking a swallow of her drink.

"What?" Al asked, staring at her.

"You lost the bet, so pay up," she insisted.

"I only have your word for that," Al said. "How do I know if you're even right?"

"Ask them," Erin said, turning and pointing at Robert and Sue.

"Okay," Al began, "did she win the bet?"

Robert and Sue just stared at him, not answering.

"It's okay," Al said. "You're both good intelligent kids. You're going to experiment somewhere
That's not what this is about. You can answer honestly without any problems."

"She won," Robert volunteered, smiling at Sue whose mouth was hanging open in shock.

"I told you," Erin said with a laugh. "I know what cum tastes like. Now pay up."

"Right here?" Al asked.

"Right here, right now," Erin said, setting her drink down and leaning back on her hands. "Go
said, pulling her skirt up as she lifted her feet up to the edge of the table.

"Well!" Al exclaimed, staring at her bald pussy spread open in front of him. "What if someone

they can have some too."

"We'll go for a walk," Robert volunteered.

"You stay right here," Erin insisted. "Witness him paying his bet."

"Well, I sure don't mind," Robert said. "Al?"

"Suit yourselves," Al said.

"You mean it, Dad?" Sue asked. "I can watch?"

"From what I understand you know what it feels like," Al said, "now you can see what it looks

"Wow!" Sue said, following Robert as he moved around the table to stand behind Al.

She couldn't believe that her mother was just laying there on a picnic table where anyone co
her legs spread and her pussy wide open. Sue decided right then and there that she was go
pussy as she stared at her mother's shaved pussy lips pouting open, thick with lust, her clit p
between her inner pussy lips which were petalled open, revealing her juice filled hole.

Still, Sue gasped when her father leaned forward and covered Erin's pussy entirely with his
hear her mother groan as her pussy was sucked. She was able to see that her father's tongu
pussy lips, circling the clit, then plunging into the hole as he ate her pussy. She couldn't belie
and exciting it was to watch her father eating her mother's little girl pussy. She could feel her
wet as she watched.

Robert encouraged her to sit next to her father, straddling the bench, and he sat behind her.

from excitement. She didn't know what was more exciting, watching her parents or having R
her pussy. Finally Al sat up, pussy juice smeared across his face and turned and smiled at S

"Oh, Dad," she gushed, "that was so awesome."

"You liked that?" he asked, seeing the glazed look in her eyes.

"Oh, yes," she replied as she felt Robert's hands slip from beneath her skirt. "It was wonderf

"Did it excite you?" he asked.

"I'll say it did," Robert replied, licking his fingers. "What a juicer. I guess it runs in the family."

"You liked that, Robert?" Al asked, giving his nephew a closer look.

"It looked great to me," Robert agreed, staring at Erin's open pussy.

"Why don't you try it and find out," Erin said, lifting her head to look at him, her fingers busy i
pussy.

"Sure, why not," Al agreed, slowly nodding his head as he watched Robert's face. "She did s
what they saw they could have some."

"Really? You mean it?" Robert asked, staring at Erin's pussy, licking his lips.

"Oh, Robert, do it, eat mom's pussy," Sue said, clapping her hands.

"Great!" Robert said, getting to his feet. "You're sure you don't mind?"

"Eat me already," Erin said, her fingers plunging in and out of her hole.

Al moved out of the way as Robert sat down in front of Erin's spread legs. As Sue held her b
out and slowly slid a finger up into Erin's hole, causing her to moan in pleasure. Then he lea
replaced his finger with his mouth, completely covering her bald pussy as he began to drink
couldn't believe how much like Sue Erin tasted as he sucked her pussy. It made him want to

did its work on her pussy and clit. He thought his own cock would explode from the pressure

Erin's bald pussy lips, sucking them into his mouth. Then he did some tongue fucking, ramm
and out of her hole.

Sue smiled to herself as she watched, knowing that that was what Robert had been doing to
it looked like. She wondered if Robert liked eating her mom as much as her, or if she tasted
He obviously liked it from the way he feasted.

Finally Robert felt Erin climbing towards her orgasm and he began to concentrate on her clit
on it and teasing it with his tongue. This proved too much for Erin and she cried out, holding
tightly against her pussy as she came for the second time in less than fifteen minutes, her ju
into Robert's eager mouth. Robert slurped noisily at the juices flowing from Erin's pussy, not
face until she had finished cumming and he had drunk every last drop.

"Oh, that was wonderful," Erin sighed, her fingers back in her pussy, plunging in and out. "N
she said.

"Right here?" Al asked.

"Yes, fuck me," she insisted.

"Inside," Al insisted, grabbing her by the hand and pulling her up.

Erin protested, but not too much as Al dragged her into the RV, shutting the door behind the
disappeared, and Robert and Sue could hear them, Sue leaned over and kissed Robert, tas
on his face.

"Did you like eating my mother's pussy?" she asked.

"It tasted almost as good as you," Robert said.

"Will you eat me now?" Sue asked, lifting her skirt and flashing her pussy at him.

"You bet," Robert agreed. "Right here?"

"I think it would be fun," Sue said. "The thought of getting caught."

"Who by?" Robert asked. "Your parents or just anybody?"

"Oooh, anybody!" Sue said. "Can you imagine a stranger seeing. That would be too much."

"Get on your hands and knees on the table," Robert said.

"Okay," Sue giggled, climbing up on the table.

"Like this," Robert said, positioning Sue so that her ass was pointed towards the road. "You

"Yes," Sue said, wriggling her ass. "Do it."

"Okay," Robert said, reaching up and unzipping her skirt.

"What are you doing?" Sue asked.

"Just making it easier," Robert explained, pulling her skirt down and slipping it under her kne
totally naked from the waist down on her hands and knees on the picnic table.

"Robert!" Sue said, blushing. "What if someone sees?"

"That's the idea," Robert said, leaning forward and licking her pussy.

"Ohh, Robert, that's nice," Sue said, spreading her knees wide and opening her pussy to hir
more."

And that's exactly what Robert did. Using his fingers he pried her pussy lips as wide as poss
pink juicy inner cunt for his tongue to slide into. He loved tongue-fucking her hole, feeling he
gripping his tongue as he slid it in and out. Then Robert pushed a finger into her pussy, ther
feeling her grip his fingers tight as he licked and sucked her clit. Sluicing his fingers in and o
increasingly wet pussy, Robert sucked her clit. Sue was gasping and panting as Robert drov
could feel her orgasm coursing through her body as it finally hit her pussy.

Robert could feel her pussy spasm as she came but he continued to suck her clit and fuck h

withdrew them and fastened his mouth on her hole, sucking at the juices and tongue-fucking
Robert licked and sucked, not stopping until the well ran dry.

Encouraging Sue to turn towards him, thus presenting her naked ass and pussy towards the
fingers into her mouth. Instinctively she sucked on them, tasting herself for the first time. Pul

fingers from her mouth, Robert stood up and dropped his shorts, releasing his hard cock.

"Suck this," he said, climbing up onto the table and sitting down, his legs spread wide.

"Oh, yummy," Sue said, leaning forward and sucking his cock into her mouth.

"Oh, yeah," Robert said as she began to suck on him.

Sue was wild with desire, sucking on his cock like a crazy woman. She tried to get more and her mouth, trying to push it down into her throat. She licked it all over, paying particular atter head and the sensitive slit at the end. Her ass was wriggling in the air as she bobbed up and cock. Robert felt his balls churn and Sue felt his cock swell in her mouth, a sign that she nov Increasing her pace, Sue tried to bring Robert to orgasm.

Just as his balls began to explode, sending cum shooting through his cock into her mouth, t opened and Al and Erin came out, their eyes opening wide and their mouths hanging open a daughter's naked ass and pussy swinging in front of them while she choked on Robert's coc mouth with cum.

"Sue! What do you think you're doing?" Erin asked as she walked over to the table.

"Mom," Sue said, lifting her face from Robert's cock, cum dribbling down her chin as he cont shooting her in the face.

"Well, don't waste it," Erin said as Sue opened her mouth and sucked Robert's cock back in. shouldn't be doing this. Especially not out here in the open. What if someone saw you?"

"That's half the excitement," Robert replied, groaning as Sue sucked his cock.

"Someone could come up and surprise you," Erin said, glancing at Al in time to see him lear his tongue into Sue's pussy from behind. "Like your father."

"Ohhh," Sue moaned from around Robert's cock as she felt her father's tongue slide into her

Erin just stood there and watched as Al sucked his daughter's pussy while she continued to huge cock. Erin couldn't believe how hot it was watching Al suck their daughter's pussy. And covered face as she sucked her cousin's cock, well, this was just more than she could stand the picnic table, Erin squatted over Robert's face, lowering her cum-filled pussy until she felt

slide up into her. So now they had a wonderful daisy chain going, with Robert noisily suckin
Sue sucking Robert's cock, and Al sucking Sue's pussy.

When Sue finally came in her father's mouth, Robert blew yet another load into hers and sh
down, watching her mother's pussy humping back and forth on Robert's face. Finally they al
themselves, looking at each other in somewhat a state of shock.

"Well, I can see this is going to be quite a camping trip," Erin said. "Let's go wash up, Sue, t
better get to bed. It's late and we have an early start and a lot of driving tomorrow."

So Sue went with Erin to wash up, not even bothering to put any clothes on to cover her ass
they washed up, Erin confirmed that Sue was still a virgin, smiling to herself as she realized
probably wouldn't last very long if either Robert or Al had their way. As they walked back to
talked with Sue.

"Sue, I want you to do me a favor tonight," she said. "When we get to the RV, I want you to
the bunk with your father. He'll be asleep, so don't wake him."

"But why?" Sue asked. "What about you?"

"I'll sleep in your bunk," Erin explained.

"But why?" Sue persisted.

"If you pay attention, you'll probably see," was all Erin would say. "Do you mind? Just sleep
to your father and he'll never know the difference. "We'll switch again in the morning before
okay?"

"I guess," Sue said, puzzled.

"Okay, quiet now," Erin said as they got to the RV. "And sleep well," she said, quickly strippi
off before entering.

Sue too took off her shirt, standing stark naked for a moment before taking a deep breath ar
She could see that her mother had already slipped into her bunk and was facing her, a sligh

was throbbing between her legs. To her amazement he lifted her with one hand and with the
cock between her pussy lips at the entrance to her hole. Before she could protest he had pu
instantly impaling her completely on his cock, taking her virginity.

At first the pain was so great that it took all of her effort not to cry out. Then as the initial pai subsided she became aware of her father's cock pulsating deep inside of her pussy. Feelin thought that she was getting fucked, Sue slowly began to slide back and forth, letting her fa in and out of her pussy. She began to enjoy the sensations in her pussy as his cock slid in a increased her tempo just a bit as she fucked him.

Just as she felt herself getting ready to cum again she felt her father pressing against her as finger, trying to push it in. She felt his cock swell, then explode deep inside her pussy as he That and the sensations of fucking him and his finger probing against her asshole proved to Sue began to cum again, her pussy spasming around her father's cock in her pussy. As her her, Sue felt her father's finger slide into her ass and she began to cum even more.

It seemed like forever to Sue as they both came and came, but finally it subsided and Sue f slipping from her pussy and his finger from her ass. He wrapped his arms around her, cuppi pinching her nipples as he drew her down to snuggle spoon-fashion against him. She saw t was still towards her, and she could see Robert's feet sticking up above her mother's head. father's voice whisper softly in her ear.

"You've got an amazing pussy, Sue," he said, pinching her nipples. "I loved fucking you."

"How did you know?" Sue asked, turning to face him, her tits pressed up against his chest a again sticking up between their bellies.

"Your mother shaves her pussy," he explained, kissing her. "Otherwise I might have never k and I hadn't planned this ourselves."

"You mean she knows?" Sue asked him, her eyes wide.

"Of course she does," Al replied. "I'd never keep something like this from your mother. We l very much."

"But I'm your daughter," Sue said. "And mom's fucking Robert. You don't mind?"

"It doesn't change one bit how much we love each other. It's sex. If your mother wants to ha someone else, she tells me. If I don't mind, then she does what she wants. But if I do mind, have a lot of respect for each other. And no, I don't mind that you're my daughter," Al laugh means I never have to wonder where you are."

"Oh, Dad," Sue said, hugging him. "I liked the feeling of your cock inside of me."

"Why don't you suck on me again and I'll eat your sweet pussy for you," Al suggested.

"Okay!" Sue agreed, quickly spinning around and planting her gooey pussy on her father's fa

Sucking his cock back into her mouth she could taste their combined cum on it. She found it and really began to suck on his cock, delighting in the flavor of it while he ran his tongue up pussy, slurping at all the cum and juices that filled her. Sucking on her father, Sue realized h was to have the kind of parents that she had. They were so cool. She could feel her father's her mouth, getting impossibly hard, and she knew that he would cum very soon if she contin So, redoubling her efforts, Sue began to plunge her mouth up and down on his cock, feeling slide into her throat, almost making her gag as she fucked him with her mouth.

Finally she felt his cock swell once more and then gobs of cum were shooting into her mouth swallowed as quickly as she could, letting her father's cum swirl around in her mouth as she as he was finishing cumming Sue felt her own orgasm sweep through her body as her fathe sluice in and out of her pussy. When she had finished cumming, Sue reversed herself and s father's arms, happily going to sleep.

She woke up in the morning to her mother lightly shaking her arm. Opening her eyes and se standing there naked, Sue remembered the night before and smile at her.

"Come with me," Erin whispered to Sue.

Quietly sliding out of the bunk, Sue went outside with her mother, surprised to see that the s breaking over the horizon. It was very chilly out and both of their nipples instantly got hard.

"Did you sleep okay?" Erin asked.

"Great," Sue nodded. "I saw you with Robert. I saw you two fucking and sucking."

"It couldn't have been as good as watching you fuck your father, though," Erin said with a sm enjoy yourself?"

"You watched?" Sue asked, surprised.

"Of course I did," Erin said. "You think I'd miss your first time with your father. Did he figure o

was you?"

"He said he would have known if you two hadn't planned it anyway," Sue said.

"How?" Erin asked.

"He said you shave your pussy," Sue explained.

"That's right," Erin said. "Well, should we shave your pussy so he won't know the difference?

"Really? You'd help me?" Sue asked, excited.

"Of course I will," Erin replied. "In fact, I'll get my shaving stuff and do it right now."

"Here?" Sue asked, looking around.

"Sure, nobody's up yet," Erin said. "Just a minute."

Quickly Erin went into the RV and then returned with a razor and some shaving cream and a

"Okay, lay back on the table and spread your legs for me," she said.

Climbing up on the table, Sue laid back, bringing her feet up to the edge and spreading her l
first time Erin was confronted with a view of her daughter's pussy spread open before her. S
much hair, but what of it there was was as bright a red as her own. She could see Sue's clit
between her pussy lips.

Squirting some shaving cream in her hand, Erin gently lathered Sue's pussy, for the first tim
heat and moistness of her daughter's sex. Carefully holding the razor, Erin began to shave g
pussy lips, scraping the hair away and leaving her pink and shiny and bald. She was quickly
then took the towel and wiped the remaining shaving cream away, now seeing her daughter
before her, unencumbered by the hair that had been growing there.

Reaching out with her hands, Erin began to rub and massage Sue's pussy, holding her puss
fingers and massaging and pulling on them. Then she gently slid a finger into Sue's hole, fe
muscles grip her finger as she slowly slid it in and out. Just as she was leaning over to lick S
Erin heard a voice.

"And what are we doing here?" she heard, turning and seeing a park ranger standing there.

"Just helping my daughter shave her pussy," Erin replied, looking the ranger up and down.

"This isn't exactly the proper place for such activities," the ranger said.

"Don't you think I've done a good job?" Erin asked, her fingers still inside Sue's pussy.

"I'd say it looks fine," the ranger replied, looking a bit uncomfortable as he stared at Sue's op

"Do you think it's smooth enough?" Erin asked innocently, batting her eyes at the ranger.

"I suppose so," he replied, a lump beginning to grow in the front of his trousers.

"Why don't you check for me," Erin said. "I'm sure Sue won't mind, will you, Sue?"

"No, Mom, I don't mind if you say it's alright," she replied.

"Go ahead," Erin said, standing up and letting the ranger see her nude body in the early mor
it."

His cheeks flushed, the ranger stepped up to the table and let his hand gently slide across S
feeling her smooth pussy lips.

"How is it?" Erin asked, a grin on her face.

"Smooth," the ranger replied nervously, his hand still covering Sue's pussy.

"Do you think it's as smooth as mine?" Erin asked, sitting on the edge of the table and sprea
wide, opening her shaved snatch to him. "Go ahead and compare," she said, her fingers trai
pussy.

Reaching out with his other hand, the ranger cupped Erin's pussy, his finger sliding between
into her hole.

"Umm, that feels nice," Erin said. "Do they feel the same?"

"I think so," the ranger said, his hard cock now easily visible sticking out the front of his pant

"Do we taste the same?" Erin asked, smiling at him.

"Uh, I don't know," the ranger said, his fingers now sliding in and out of both their pussies.

"Don't you think you should find out?" Erin asked.

"I couldn't agree more," the ranger said, finding some courage as he took his fingers out of E
glued his mouth to it.

Erin moaned and let her hand hold the back of his head against her as his tongue went wild
his other hand he continued to frig Sue's pussy. Sue was finding all of this as amusing as ex
watched her mother getting her pussy eaten by a total stranger while he fingered her own sl
herself looking forward to her turn at being eaten as his fingers slid in and out of her now sm
pussy. Sue heard her mother begin to moan more loudly and then she was clamping the ran
her pussy and Sue knew that she was cumming in his mouth. His fingers in her pussy slowe
mother's cum as it flowed from her pussy.

"Don't forget to compare," Erin said as he finished licking all of the juices from her pussy.

"I wouldn't miss it for the world," he said, pulling his fingers from Sue's pussy and replacing t
mouth.

Sue sighed as she felt his tongue slide up into her pussy. She was leaning on her elbows an
everything he was doing between her pussy lips now that she was shaved smooth. It felt so
herself against his face while he ate her. She knew that she was going to cum quickly, excite
shaving her and then watching her being eaten on the picnic table by the ranger, and now fr
sucking her pussy on the table, her father and cousin asleep inside the RV in the early morn

His tongue felt so good as it glided in and out of her pussy. She wondered if he could also ta
cum inside of her that he had shot up into her pussy last night when he deflowered her. The
well as the ranger's tongue in her pussy were getting her very hot. She saw her mother watc
smile on her face as the ranger continued to eat her pussy on the picnic table in the early m

Then she began to cum, lifting her pussy up to meet his thrusting tongue as it sluiced in and
slurping up the juices that were flowing from her. When the ranger finished sucking all he co
pussy, he lifted his face, a smile spread across it as well as pussy juice.

"We'd really like to thank you for seeing to our needs so well," Erin said, smiling at him, her l
wide. "Now maybe we can help you with your little problem," she said, staring at the bulge in
don't you let him out and sit here," she suggested. "I'm sure we can help."

As fast as he could, the ranger dropped his pants and sat on the edge of the picnic table, his
standing straight up in the air. Sitting in front of him, Erin began to suck on his cock, easily le
slide deep into her throat. After sucking on him for a couple of minutes, Erin lifted her face fr
and smiled at him.

"Is this okay?" she asked, pumping his cock with her fist as she licked the head of it.

"Yeah, it's great," he groaned in delight.

"Sue, why don't you show your appreciation to the ranger," Erin suggested, licking the head

"Sure, mom," she said, getting to her knees on the table and bending over the ranger's ragin
open as she lowered it around his cock.

Erin released the ranger's cock, sitting there for a minute watching as her daughter sucked o
quickly getting to her feet, her big tits swinging from her chest, she quietly went over to the R
the door.

"Al, you've got to come see this," Erin whispered as she entered the RV.

"What is it?" Al asked, rubbing his eyes and seeing his naked wife standing there. "Why are
asked.

"Just come with me," Erin insisted, tugging on his arm. "You'll see."

As Al swung his legs off the bunk to jump down, Erin leaned forward and quickly sucked the
into her mouth, tasting the dried cum from when Al had fucked their daughter the night befor
as he jumped down, Al followed Erin out of the RV. He stopped short when he saw Sue kne
picnic table sucking the ranger's cock, her newly shaved pussy pointing at him.

"What's going on?" Al asked, looking down at Erin's smiling face.

"He caught me helping Sue to shave her pussy," Erin explained. "We thought we'd give him
being so understanding.

"Hey, what's going on?" they heard Robert ask as he staggered out of the RV in his shorts. '
when he saw Sue kneeling on the table.

"Why don't you go help them?" Erin suggest to Robert as he stared. "I'm sure they won't mir
reaching out and squeezing his cock through his shorts.

"You don't mind?" Robert asked, surprised by Erin's forwardness in front of Al.

"Go ahead," Al said. "I'm sure she'd like it."

Without hesitating Robert went over to the picnic table where Sue was sucking on the range
his face in her pussy, jamming his tongue up inside her as far as he could. Sue moaned whe
tongue slide into her pussy and she redoubled her efforts on the ranger's cock. The ranger c
what was happening to him as this beautiful young redhead sucked his cock while her parer
other guy sucked her pussy from behind. Groaning out loud, he felt his balls explode and tor
shooting into Sue's mouth.

Sue eagerly gulped and swallowed as the ranger filled her mouth again and again with his c
that she absolutely loved cum as she finished sucking the last of it from the ranger's cock. S
excitement rising as a result of Robert's tongue in her pussy, so she was surprised when he
her before she came. Just as she was about to turn and see why he stopped, she felt somet
into her pussy. Looking back between her legs she could see Robert's balls dangling below
realized that it was his cock that was slowly pressing into her pussy.

Arching her back, she felt his cock slide into her still sore pussy until he pressed up against
Slowly he started sliding his cock in and out of her pussy and quickly the soreness disappea
started flowing. She couldn't believe how good it felt as his cock slid in and out of her pussy
herself meeting his every thrust.

Robert was in heaven as he thrust his cock in and out of Sue's pussy. She was so tight he c

knew she was ready for him. And was she ready. Her pussy seemed to grip and milk his coc
out of her honey hole. Very quickly he approached the point of no return, and slamming his
Sue's pussy as possible he felt his balls blow their load, pouring cum deep inside her pussy.

Sue was panting as Robert's cock sluiced her slit, filling her with cock. She felt his cock sudd
swell, filling her even more, then it was pulsating and she could feel his cum shooting into he

just lay there with her face pressed into the picnic table as Robert's cock finished dumping it
her pussy. Then suddenly she was aware of her parents standing next to the table as Rober
from her well-fucked pussy.

"Did you enjoy that, Sue?" Erin asked, leaning over and kissing her gently on the cheek.

"Oh, mom, that was wonderful," Sue sighed. "I just love cocks."

"I guess I'll be going now," the ranger said, pulling his pants back on. "Thanks for the hospita

"Thank you for sucking my pussy," Erin said with a smile.

"Any time," the ranger said, blushing as he stared at Erin's hard nipples standing up on the e
"You both tasted great."

"Thank you," Erin said, leaning forward and kissing him.

"He seemed like a nice guy," Al said as the ranger walked away.

"He had good taste," Erin said with a laugh.

"We'd better get on the road," Al said. "We have to pick up Judy tonight."

"Let me just help Sue clean up first," Erin said, moving over to where Robert still stood behin
limp cock dangling between his legs. "But you first, Robert," Erin said, leaning over and suck
covered cock into her mouth.

Erin sucked and licked his cock for a minute or two, then stood back up, licking her lips.

"That's better," she said. "And now, Sue, let's see why that ranger thought your pussy tasted
said. "Let me get all of Robert's cum out of there for you."

And without another word Erin reached over and spread Sue's pussy lips wide open, seeing
dribbling from her hole. Bending forward, she glued her mouth to her daughter's pussy, suck
the cum that filled her. Sue was beside herself with joy as her mother sucked her cum-filled
couldn't believe how erotic it was with both her father and her cousin watching.

As Erin sucked Sue's pussy, Al stepped forward, sticking his now hard cock in Sue's face. W

Sue opened her mouth, letting her father slide his cock in. Then while her mother continued her father began to fuck her face, sliding his cock in and out of her mouth while she kept her around it. Sue felt like she was in heaven as her father fucked her face and her mother suck pussy. The only thing that could possibly be better would be if Robert were fucking her at the

She felt her father's cock begin to swell in her mouth and she knew that he was about to cum a vengeance, trying to swallow his entire cock as she suddenly felt his hot cum shooting into the same time her pussy began to spasm from the attention of her mother's tongue and she she continued to swallow her father's cum that just kept shooting into her mouth.

Finally the cum stopped filling her mouth and she also felt her own orgasm subsiding. Lifting her father's cock, Sue looked up at him.

"I just love your cock, Dad," she said. "I love it when you cum in my mouth."

"You suck like you've been doing it all your life," Al said, smiling at his daughter. "You're wel whenever you'd like."

"And you have an absolutely delicious pussy," Erin said, lifting her face from her daughter's

"Oh, Mom, you think so?" Sue asked, turning to look at her mother.

"Oh, yes," Erin said, "and having it full of Robert's cum just made it better."

"Hey, we'd better get out of here before the whole camp comes over here," Al said with a lau all naked out here."

There was much giggling and laughter as they all ran to the RV, piling inside as quickly as p

"We need to drive for at least eight hours to get to the airport to pick up Judy," Al said. "So it be a long day. Maybe you all might put some clothes on too," Al suggested with a laugh.

"Maybe later," Sue said with a smile. "Me, I want some more loving."

"What are you talking about?" Erin asked with a laugh. "You haven't had enough for one mo

"I want Robert to fuck you and fill your pussy with cum so I can taste it like you did to me," S

"Oh, Sue, you are our daughter, aren't you," Erin laughed. "As long as your father doesn't m
himself for a while, that sounds wonderful to me."

"You go ahead," Al laughed. "But I'm going to fuck you later. In fact, I think I'll fuck your ass

"Oh, Dad, that sounds wicked," Sue said.

"Later on you'll find out," Al said, slipping his pants on and getting into the driver's seat.

As he pulled the RV out of the camping site, he could see in his rear view mirror that Erin ha
her hands and knees, her bald pussy pointing at him. He didn't get to admire the view for lon
because Robert got on his knees behind her, and judging by the sounds he was hearing, be
could see Sue on her knees next to them, one hand between her legs as she fingered her o
watched Robert's cock sliding in and out of her mother's pussy.

"Oh, Mom, it's so sexy," Sue said, her mouth open as she watched Robert's cock sliding slo
her mother's bald pussy.

"It feels wonderful," Erin sighed, gently thrusting back at Robert as he fucked her. "Why don
from underneath me," she suggested, grunting as Robert thrust suddenly into her. "That way
pussy at the same time."

"Oh, would you," Sue enthused, scrambling onto her back and sliding under her mother unti
sliding in and out of her pussy right in front of her eyes. "Oohh, this is better," Sue said, lickin
lips.

"Go ahead, lick me," Erin said, lowering her face down between Sue's spread thighs, her tor
her daughter's pussy lips right up into her hole.

Sue gasped as she felt her mother's tongue slide into her pussy. Lifting her head an inch sh
her mother's distended and engorged clit into her mouth, gently sucking on it as Robert's co
forehead on its way in and out of her mother's pussy. Releasing her mother's clit, Sue let he
along the length of Robert's cock as it moved back and forth. She could taste her mother's p
excited her. She gasped as she felt her mother's mouth working magic on her pussy, sendin
and pleasure shooting through her body. She raised her attention a notch and began to lick
juncture of her mother's pussy and Robert's cock sliding in and out of it. It was so intoxicatin
loved the flavor, the excitement, the pure, unadulterated lust of the moment.

Suddenly Robert began to stroke his cock in and out of Erin's pussy at a faster pace. Sue re
attention to her mother's clit, sucking and teasing it even as she felt her mother driving her c
tongue in her pussy. Robert began to moan and groan as his orgasm approached. Sue inter
her mother's clit, feeling her writhe as a result. Robert finally slammed his cock into Erin's pu
out as he did so. Sue could see him clenching his loins as his balls pumped cum deep inside
Her mother was gasping, grinding her ass back against Robert as he came inside of her.

Sue concentrated again on the juncture of Robert's cock and her mother's pussy, sucking as
newer juices leaking from around Robert's cock. She reached up with a hand and began to g
balls, milking the last of his cum into her mother's pussy. Then Robert slowly withdrew his co
pussy. Sue let her tongue drag along its entire length as he pulled back, drunk on the taste o
cum as she slurped it off of him.

As Robert's cock slid from Erin's pussy it fell right into Sue's mouth. She engulfed it, sucking
she slurped their combined juices and cleaned him. She felt something drip on her face and
seeing a dribble of cum from her mother's splayed pussy dripping down. Releasing Robert's
mouth and caught the dribble, lifting her face until she had her mouth glued to her mother's p
the cum from her and swallowing it, letting it swirl around in her mouth for a moment, tasting
mother all at once. Then she slid her tongue into her mother's hole, butterflying it as she trie
the cum which Robert had filled her with. She almost missed her own orgasm as her mother
her, so intoxicated was she by sucking her mother's pussy filled as it was with Robert's cum

She sucked and sucked, until finally Erin spoke up.

"You've got to stop, Sue," she said. "I can't take any more."

"But it tastes so good," Sue said, running her tongue into her mother's pussy again.

"No, stop," Erin said, rolling off of Sue. "It's too much."

"Oh, I never want to stop," Sue said, tears forming in the corners of her eyes. "I just love the
me feel."

"You just have to pace yourself," Erin said, pulling Sue up and hugging her. "You're a beauti
young woman with your whole life ahead of you. If you're lucky you'll love a hundred men an
times. You don't have to have it all right now."

"Oh, I know," Sue acknowledged, kissing her mother. "It's just that it feels so good."

"There's nothing better," Erin agreed. "But this isn't fair to your father. Let's get dressed and travels. We have to pick Judy up later this afternoon, so I don't know what later will be like."

"It'll be great," Robert said, putting his arms around both of them. "Mom's going to love this."

"You mean..." Sue began.

"You'll see," Robert replied, interrupting her. "She's taught me most of what I know."

"Wow, she must be really cool," Sue said, her eyes wide.

"The coolest," Robert agreed. "But you two are right there. Totally cool."

"He's such a sweet stud, isn't he?" Erin asked with laugh.

"I think so," Sue agreed, wrapping her arms around Robert.

They all dressed then, moving to the front of the RV to join Al as he drove. The drive to Gran long but beautiful one, with the Rockies all around them. The got to the airport only a half an Judy's plane arrived and they were waiting for her at the gate when she disembarked. She c prepared for the cool thin air in Grand Junction, because they could all see that her nipples w sticking out under her shirt. Sue was surprised to see that Judy was blonde and petite, smal mother, but very pretty. It was hard to realize that she was her father's sister. There were ma kisses, and Sue noticed that Robert cupped Judy's ass with his hand when he greeted and k

"It's so nice to be here at last," Judy said. "It wasn't any trouble for you, was it?"

"Not at all," Erin said. "We broke camp this morning and it was a perfect drive."

"Robert's not been any trouble, has he?" she asked. "It was really good of you to take him a space."

"Robert is an absolute delight," Erin assured her. "The trip wouldn't be the same without him

"I'm so glad," Judy replied as they grabbed her bags and walked to the RV. "Will there be en of us?" she asked when she saw the RV.

"Sure there is," Al answered. "We've managed so far, I'm sure it will work out."

As they drove the short distance up to the top of Grand Mesa Judy brought them up to spee her husband, telling them that they were probably going to get a divorce. Robert looked pret news and was pretty quiet until Judy informed him and them that his father had agreed to le because of his hectic and unpredictable travel schedule due to his work. Robert brightened of news and seemed to be much less upset than he had been.

They found their camping site and immediately began the now familiar task of setting up car was of it, while Judy just watched, uncertain of what to do or how to help. Erin laughingly tol she'd soon enough learn the routine, to just relax. To help her with this, Erin brought out the Daniels and soon they all had a drink in their hands, Sue and Robert included. Darkness ca began to prepare dinner, everyone helping a little bit. By the time they finished eating it was and getting cold because of the altitude and the desert. Erin suggested that they call it an ea get up early in the morning to explore the mesa.

As they prepared the two bunks for sleep, Judy looked puzzled.

"Who's sleeping where?" she asked.

"Well, up until now Al and I slept in the main bunk and Robert and Sue shared the other one "But there's plenty of room in the main bunk for one more. We just have to decide what the a going to be. We could put Al and Robert in the second bunk and the three of us can sleep in suggested.

"Oh, you two shouldn't have to do that," Judy protested.

"Why don't we draw straws for the bunks," Al suggested.

"How would you do that?" Judy asked, smiling at her brother.

"Well, we'll make three long straws and two short ones. That'll make it easy," he replied.

"That sounds fair," Erin said, opening a drawer and getting some straws out.

She cut them, then handed them to Al who held them in his hand with only one end showing had each picked one, Al and Erin had the short straws.

"Well, that settles that," Erin said as Sue went into the head.

When she emerged a minute later, she was wearing only a t-shirt. Robert went next into the
while he was in there Sue climbed up into the bunk. As she did so her t-shirt hiked up over h
and everyone else were treated to a view of her naked pussy peeking out from between her
turned to see if anyone else had noticed, nobody was looking in that direction. Robert came
wearing only his underwear, his semi-hard cock obvious. Again Judy noticed that nobody wa
attention. As Robert climbed up into the bunk she turned to get her things and saw that Al an
undressing at their bunk and got into it naked.

Smiling to herself Judy went into the head, only to emerge a minute later wearing only a long
came down to her mid-thigh. Climbing into the bunk where Robert lay with Sue on the other
made sure that her t-shirt hiked up to the point where her pussy would be visible if Al or Erin
As she lay down next to her son she saw that Erin had a smile on her face as she reached o
the light.

Judy lay there for a few minutes, listening to the sounds of the night out on the Mesa and als
the breathing of the other four people in the RV with her. She felt her son's hand slide over o
slowly moving up until his fingers were sliding between her pussy lips. She held her breathe
anyone would realize it as Robert's fingers began to immediately excite her.

Hearing a sound, Judy looked towards where Al and Erin were bunked. Even with the light o
make out their shapes as her eyes adjusted to the dark. She realized that Erin was laying on
his cock while her pussy was plastered onto his face. The sounds she was hearing were the
them eating each other. This excited her even more as Robert's fingers continued their danc
Quietly reaching down, Judy let her hand slide over Robert's thigh towards his cock, only to
find Sue's head already there.

Sitting up, Judy looked down and saw that Sue indeed was sucking Robert's cock as he lay
fingers in her pussy. As Judy watched Sue moved so that she was straddling Robert's head
breathe as she watched Sue lower her pussy onto her son's face next to her. Turning onto h
she was laying facing Robert and Sue, Judy propped her right leg up by putting her foot flat
opening her pussy to Robert's fingers even more.

Judy lay like this, watching as Robert sucked on Sue's pussy, his fingers busy in hers. Then
sucking on Sue, pushing on her until she had moved to the side and was now straddling Juc
smell Sue's fragrant pussy right above her face and she grabbed her by the hips, pulling her
down onto her mouth, her tongue shooting up inside of her.

What a delicious pussy, Judy thought as she sucked on Sue. And absolutely no hair either.

lay together, a tangle of arms and legs. She felt warm, so Judy pulled her t-shirt off over her
her naked in the bunk with Robert on one side of her and Sue pressed up against her other
bodies entwined with hers.

When Judy awoke in the morning she found herself alone in the bunk. She stretched, feeling
wondered where Robert and Sue could have gotten to without waking her. Sitting up, she sw
bunk just as the door to the head opened and her brother Al exited. Because of the position
the driving area, her knees were on a level with Al's head as he stood there staring at her op

"Well, good morning," he said, smiling at her. "You had a good night?"

"Yes," she replied, flustered, aware of the fact that she was totally naked, feeling her nipples
he stared at her.

"Sue and Robert didn't bother you?" he asked.

"No, everything was fine," Judy said, not sure of what to do.

"Sue said she liked the taste of your pussy," Al said, a grin on his face. "What did you think c

"I, I -- what do you mean?" she asked, shocked by his question.

"Oh, come on, Judy. You think we don't know what went on last night. For god's sake, we w
away. It sounded great."

"Yes, well -- yes," was all she could say. "Where are they now?"

"Outside with Erin," Al answered. "Want some help down?" he asked, stepping between her
a foot from his face.

"Sure," Judy replied, completely flustered now.

Putting his hands on her waist, Al slid his sister forward until she was sitting on the edge of t
pussy spread open in front of him.

"You look great," he said, leaning forward and running his tongue into her pussy. "Sweet, jus

"Oh, god," Judy said, arching her back as Al continued to suck her pussy. "What are you doi

"Robert said you like to have your pussy eaten, so I'm eating," Al replied. "I like to eat pussy

"But you're my brother," Judy tried to complain.

"And Robert's your son," Al retorted. "I don't see where that argument is going to carry much
said, sticking his tongue into her pussy again. "You are delicious. I always wanted to suck yo
were growing up," he said, again sticking his tongue into her pussy.

"Oh, god, yes, suck me," Judy said, holding his head as his tongue continued to slide in and
"Oh, yes."

As Al sucked his sister's pussy, he was intoxicated by how sweet she tasted. A natural blond
little hair on her pussy and Al just delighted in sucking on her clit and her thick pussy lips. Ju
humping herself against his face now, her excitement level rising as she felt herself approac
she felt Al grip her clit between his teeth and lightly nibble on it while his tongue flicked back
she cried out, feeling herself explode as she came in his mouth. She could hear him slurping
juices as she continued to cum, licking and sucking as he drank her up. When she finished c
his face from between her legs, her pussy juice smeared across it.

"Wow!" he said. "You are just delicious," he said. "I love the taste of your pussy."

"Oh, Al, I can't believe we did this," Judy said, feeling a bit of remorse as she looked down a

"Didn't you like it?" Al asked, licking her pussy again.

"God, yes," Judy said with a laugh. "You eat pussy like a pro."

"Why, thank you," Al said, laughing with her. "Here, come on down," he said, lifting her from
letting her down onto the floor in front of him.

Now Judy became aware of the fact that Al was naked, his hard cock standing out in front o
pressing against her belly as she stood in front of him, her nipples hard on the ends of her fu
breasts.

"Sue said she loved the way you sucked her pussy," Al said, not moving. "Do you do as well

"So I've been told," Judy replied, blushing, "but maybe you should be the judge of that," she
her hand wrap around his cock. "This is quite an instrument," she said as she fondled him, c
and gently squeezing. "I can't believe that you're my brother."

"If that bothers you, just think of me as a cock right now," Al said, leaning forward and kissin
tongue gently sliding in past her lips to swirl in a short soft dance with hers. "Let me sit up th
said as he broke the kiss.

As Judy stepped aside, Al hopped up on the bunk, sitting with his knees wide apart and his
front of him. Judy reached out and grasped his cock again, squeezing it, a small droplet of p
the slit. Leaning forward she stuck her tongue into the slit of his cock, tasting him and eliciti
delight from Al. Opening her mouth she sucked the head of his cock in, swirling her tongue a
opened her mouth and began to slide down his cock, inch by inch of it disappearing into her
throat until her face was buried in his pubic hair. Al could feel Judy contracting and squeezin
her throat muscles, her tongue never stopping its lathing of his shaft as it lay buried in her m
slowly she slid her head back up, letting an inch at a time slide out of her mouth until she wa
cock with just the tip of her tongue stuck in the slit at the end of his cock.

Al was beside himself already. He had never experienced anything like the blowjob that his
him. Judy began to fuck his cock with her mouth and throat, sliding up and down on him, fas
sucking on him, teasing him with her tongue as she gobbled his meat. Al couldn't believe it a
cock disappear and then appear again in and out of his sister's mouth. And throughout the e
never left his. She watched him, as much of a smile as possible on her face the whole time a

cock.

Now Judy was holding his balls in her hand, rolling them around as she continued to suck hi
accurately, fuck her own face. Al knew he was going to blow a load any second as Judy nev
intensity. When he felt his balls churn and begin to shoot cum through his cock Judy let his c
her mouth except for the head of it. As his cum shot into her mouth she would slide her tong
head of his cock, driving him crazy as she slurped and swallowed his cum as it filled her mo
stopped cumming and Judy sucked the last of it from his cock, sucking him down into her th
more times before lifting her face from his cock, her eyes still on him.

"How was that?" she asked, licking the head of his cock one more time.

"I've never had a blowjob like that in my whole life," Al said, shaking his head in amazement
absolutely awesome. Even Erin doesn't suck a cock like that, and she can suck a cock."

"Then we're even," Judy said, a smile on her face.

"I'd say we're just getting started," Al said, hopping down from the bunk. "I can't wait to samp
you."

"Oh, and what exactly did you have in mind?" Judy asked, leaning out across the bunk to ge

"I think I'll start by replacing my fingers with my cock," Al said, sliding two fingers into Judy's
and open pussy. "I bet that'll feel wonderful too."

Before Judy could reply the door to the RV opened and Erin stepped in, stopping when she
with his fingers in Judy's pussy.

"My, my, is everyone okay here?" Erin asked, reaching out and taking holding of Al's flaccid

Judy twisted away from Al's fingers in surprise, turning to stare at Erin. She saw Al holding h
to Erin's mouth and watched as she opened it and sucked on them, her eyes on Judy the wh

"Oh, she does have a sweet pussy," Erin observed. "Sue was right."

"Erin," Judy began.

"Don't worry about it," Erin said. "There's more than enough for everyone."

"But I --" Judy began to say.

"Look, there's no explanation or excuse necessary. Really," Erin said. "I mean, do I have to too just so you'll believe me?"

"You'd do that?" Judy asked, surprised.

"Well, I sure hope so," Erin said with a grin. "That little teaser that Al gave me on his fingers hungry to try it for myself. Preferably before and after Al fucks you. I love the taste of his cum taste of cum, actually."

"I never knew," Judy began to say. "But what about Sue, and Robert?" she asked.

"It seems to me they already beat us to it," Erin laughed. "I think we'll have to change the bu assignments nightly just to make it fair."

"I can't believe this," Judy said, swinging her legs over the side of the bunk.

"May I?" Erin asked, parting Judy's knees with her hands and opening up her pussy, a smile

"Oh, god," Judy said, leaning back on her hands and watching as Erin leaned forward and li a cat, from the bottom to the top.

She groaned when she felt Erin's tongue slip between her pussy lips and slide up and down time, circling her clit and rimming her hole. She died for want of something inside of her. She pussy up against Erin's face, pressing against her mouth. Finally Erin stiffened her tongue a into Judy's hole, gluing her mouth to her and sucking as her tongue sluiced in and out, in an whole body was shaking as she felt herself cum again. She couldn't believe this. She hadn't all night. Erin was slurping and sucking at the juices from Judy's pussy as she came, one fin clit at the same time.

Finally Judy felt her orgasm subsiding and Erin licked and sucked at her pussy, making sure When the door to the RV opened and Sue and Robert stepped in, Judy was so drained and even move, she just leaned back on her elbows, her knees spread wide, with Erin's tongue s her pussy.

"Oh, mom, cool," Sue said when she saw what was going on. "Doesn't she taste great?"

"Yes, she does," Erin said, lifting her face finally from Judy's pussy. "A wonderful munch."

"God, I'm so worn out," Judy said, smiling at Sue. "This is quite a family. And I owe you one,
Erin, a smile on her face. "You just say when. That was great."

"How about now," Erin replied. "I'd love to have my pussy eaten now. I'm so wet from eating

"Well, let's switch places, then," Judy said with a laugh. "It seems to be the best way."

"I like it," Erin agreed, climbing up onto the bunk after Judy hopped down.

Turning and facing everyone, Erin brought her feet up onto the edge of the bunk, as far apar
and leaned back on her hands, looking down her body to where her pussy lips were spread,
from between them.

"You look delicious," Judy said, leaning forward and slurping her tongue up Erin's pussy. "Ar
no hair," she said, again licking her pussy.

Erin sighed as Judy continued licking her pussy. She could feel her juices running and she k
Judy was getting a full taste of her. She put one hand lightly on Judy's head when she felt Ju
slide up into her. She could tell by the way Judy ate her that she liked eating pussy. That ma
Judy's tongue continued to dance between her pussy lips.

"Oh, Daddy, please fuck me," Sue said, wrapping her arms around her father from behind, le
his cock. "Please," she begged. "I want you to fuck me while I'm sucking Robert's cock. Mon
so horny," she explained.

"You don't need any help being horny," Al laughed, turning to hug his daughter. "Go ahead,
the other bunk and we'll put Sue on her hands and knees. But first she can suck me a little b
Robert climbed up on the bunk, sitting facing his mother eating Erin's pussy on the other bun

Sue sat down on the edge of the bunk and opened her mouth when her father stepped close
slide in and closing her lips on it. She sucked him with her entire mouth, her tongue sliding a

when she felt the head of it slide in an inch or two. Slowly Al began to move his cock in and
daughter's pussy, easing it in an inch or two more each time until finally he completely burie
her pussy.

Sue moaned and then went down on Robert's cock, sucking him all the way into her throat a
begin to fuck her. She could hear her mother gasping as she came. She could hear Judy's t
mother's pussy juices. Just for a second, but everything was absolutely clear for just that se
able to hear and feel everything that was going on at once.

She sucked Robert's cock with a vengeance as her father's cock slid in and out of her pussy
feeling of it, big and strong as it opened her up each time, filling her, exciting her. Then sudd
her father pull his cock from her pussy and slide it up across her asshole, rubbing it. Then he
into her pussy, pumped a few times, then smeared more of her juices on her asshole. Sue s
slowly, excited at what she knew was about to happen. She felt her father's cock slide into h
filling her, then sliding out and pressing against her asshole. He pressed several times, Sue
stretching her but unable to penetrate. It was unpleasant but it was also very exciting at the
Again she felt his cock slide into her pussy, stroking her several times, then pulling out and p
against her asshole again.

This time there was a sudden searing pain and several inches of her father's cock penetrate
moaned around Robert's cock in her mouth, tears filling her eyes as she felt her father's coc
apart. She almost cried out when she felt him pull back just a bit and then press forward aga
inches of his cock sliding into her ass. He did this one or two more times and then she felt hi
against her ass, the hair around his cock tickling her. She realized then that her father's enti
buried in her ass. There was no more pain and slowly she adjusted to the feeling of his cock
as he just rested there, his cock throbbing inside of her.

"Ready?" he asked softly, pulling back a bit.

"Uhng, yes," she gasped before plunging back down on Robert's cock.

Slowly Al began to slide his cock in and out of Sue's ass. It took several minutes before it be
enough to slide comfortably, but gradually Sue adjusted and relaxed and began to enjoy the
father's huge cock as it slid in and out of her ass. She stopped sucking on Robert's cock, ho
hand, and concentrated on meeting her father's thrusts as he fucked his cock deep into her
her as she looked back at him over her shoulder, increasing the pace and really fucking her

was about to cum and he gave one final thrust, burying himself deep inside of her ass as his
pump and hot sperm shot into his daughter's ass.

Sue was gasping as she felt her father's cock spurting deep inside of her ass. She imagined
feel the hot cum as it splashed against her insides. She felt herself cum too as her father em
inside of her. When he finished he abruptly pulled out of her.

"Robert, you come fuck her in the ass too," he said. "That way she'll be easier the next time.

"Al, you fucked her in the ass?" Erin asked, moving up beside him. "I wish you had told me.
watch."

"You can watch Robert then," he said. "She was incredibly tight. I didn't think I'd be able to g
moment."

"Did you enjoy that, Sue?" Judy asked.

"Not at first," Sue said over her shoulder. "It hurt so much. But then at the end, especially wh
inside of me, I loved that. Oh, yes," she gasped as Robert slid his cock into her pussy. "Oh,
fuck me," she said as Robert slid his cock in and out of her. Then he too pulled his cock from
pressed it against her asshole. This time it went in with very little resistence. Sue gasped ag
felt it fill her but quickly got into the sensations and began to fuck Robert back as readily as
he was fucking her pussy.

"Looks like we have another ass fucker in the family," Al said to Erin. "She might even like it
If that's possible."

"She's our daughter," Erin said. "What else did you expect?"

"What about you, Judy," Al asked, "do you like it in the ass?"

"I've only done it once, a long time ago," Judy replied as she watched her son fuck Sue in th
remember particularly enjoying it."

"Then I've got two things to look forward to then," Al said, "your pussy and your ass. I sure w
started with each other when we were much younger," Al said. "Think of all the fun we could

"That's better," Erin said, straightening up from where she had been cleaning Al's cock with

towel.

Just then Robert groaned, slamming his hips into Sue as he shot his load of cum into her as
fingering her pussy between her legs as Robert filled her ass with his cum. She loved it. Nov
cock in her pussy and one in her ass at the same time, she thought. But she'll save that for l
both have some strength, she thought. Robert finished cumming and his cock oozed from S
cum following. Erin reached over and cleaned Robert's cock with a damp paper towel, then
Sue's ass up. She finally suggested to Sue that she wear some panties with a pad under he
likely to dribble out for hours.

"That sure seems unpleasant," Judy observed.

"Oh, only at first," Erin said. "Then you adjust and it's really no different than getting fucked i
pussy. A cock in your ass and a dildo in your pussy can do wonders for you."

"How about two cocks, mom?" Sue asked, getting to her feet, her face flushed red and a sm

"I've never tried that," Erin admitted. "Though I've wanted to. I just never had the opportunity

"I can't wait to try it," Sue confessed. "And even a third one to suck on. That would be the be
pussy. Oh, I want to do it all," she exclaimed.

"You will," Erin laughed. "Just take it easy. You don't have to do everything your first week.
whole life ahead of you. Relax. Enjoy it.

Car Ride With Friend's Mom (Drinking in the back seat causes her to lose her inhibition)
bybronston22©

I appreciate all the feedback received from my first submission. While I may not be the worl
will only submit true stories with names changed to protect the guilty. I have been lucky to h
great sexual experiences and always appreciate comments from the readers. This particula
recall fondly and I still see Mrs. James occasionally with her new husband. She is twenty ye
still attractive. This was my first encounter with her and thankfully not the last.

I had a childhood friend (Matt James) whose parents owned a condo at Sugar and Matt invit
weekends. Usually Matt's older sister brought a friend as well and everyone would ski excep
who preferred to read and relax rather than braving the wind, ice, and cold. Matt's Mom was
big boobs. She was not overweight but was stocky with muscular legs. She was a gymnast
and while she was not small I always found her very attractive. The condos had a communit
would join us after the skiing and I never missed a chance to enjoy looking at her body.

Mr. and Mrs. James could not have been more different so it really did not surprise me wher
after Matt and I went to college. Apparently, Mr. James had a girlfriend and finally told Mrs.
leaving her. Mrs. James did not take it well and never missed a chance to say something de
ex husband.

Over Winter break of my junior year in college Matt asked me to join him and his mother at
skiing. We were allowed to invite our girlfriends and both of us had a great few days skiing d
and drinking and screwing during the night. Mrs. James would stay in the condo and was us
by the time we came off the slopes. Typically she was in bed asleep by 11pm and that is wh
started for the rest of us.

Our girlfriends were supposed to leave after 4 days but Matt persuaded his chick to stay. I w
as my girlfriend's parents were pretty strict and never liked a change of plans. I said goodby
resigned myself to spending the evenings alone. I was surprised when Mrs. James made a
me and during the last two evenings she and I teamed up against Matt and his girlfriend pla
Pursuit. We all got loaded and had a really good time. The last night we were there we watc
while Matt and his girlfriend snuggled under a blanket on the floor, Mrs. James and I shared
happened between us other than I gave her a foot massage during the movie which she cle
went to just above her knee and it was thrilling. I had a massive erection that I think she noti
I was too drunk to care.

We came off the slopes on our last day of skiing and quickly packed the car. We had to fold
seats down to fit the skis in. This meant that two would ride in the front seat and the two in th
squeeze into one seat. Since Mrs. James had spent the better part of the day drinking in the
agreed that Matt and his girlfriend would take the front seat and I would join Mrs. James in th
packed up a cooler with enough bourbon and coke to keep everyone but the driver well supp
ride back home. The weather was not good and traffic down the mountain was terrible. It wa
miles. If that wasn't bad enough, we had to roll the windows down periodically to defrost the
the inside of the car would quickly cool down to near freezing. Little did I know this was abou
greatest car ride I ever experienced.

Mrs. James was feeling pretty good despite the cold and she asked me to hold her drink wh
sleeping bag in an effort to give us a little warmth. She pulled the bag around us and announ
I were now being forced to spoon in order to avoid hypothermia. We had a good laugh but s
She positioned herself in front of me and sat on the forward part of the seat with her back ag
stomach. I had no choice but to spread my legs to accommodate her. Her butt was right aga
was immediately fighting an erection. If she noticed she did not say anything. We continued
routine down the mountain and I furiously pounded my drink.

After a few minutes, she turned her head and asked, "Are you uncomfortable?"

I responded with the truth. "I am great except my hands are freezing." They were outside the
one hand was holding a drink we were sharing and the other was getting buffeted by the win
rolled down the windows.

Mrs. James pulled my hands under the sleeping bag and said, "Don't put those ice cubes an

I had a pretty good buzz going and without really thinking I put my hands on her side and sa
cold?" Even through her shirt it was like an electric shock going through her. She grabbed m
them in front of her with her hands on top of mine.

"Don't try that again." She said with a laugh. Matt and his girlfriend could not hear a word we
with the radio cranking.

Mrs. James put her head back against me as we continued down the mountain. It was as da
the car and other than an occasional sip of our drink, we neither moved nor talked. My hand
and they were resting on Mrs. James upper stomach on the outside of her sweat pants. She
the old draw string sweat pants with the elastic around the ankles and a navy blue turtle nec

really good and my mind began to wander. I think I was drunk enough to allow it and within a
erection was pushing against her lower back. There was no doubt that she could feel it.

"Sorry about that." I whispered. "I really can't help it."

"I guess I should be flattered." Mrs. James responded.

With a little chuckle I said, "Just promise me you won't tell Shellie (my girlfriend). Trust me, s
understand."

Mrs. James response floored me. "I can keep a secret if you can." She said.

With that she moved my hands up under her shirt on to her bare skin. I took my cue and beg
her upper stomach. I occasionally brushed against the under side of her bra and waited for h
hands away. She never did. I got bolder and began to caress her boobs through her bra. I m
hands were trembling as I rubbed against the silky material. I could feel the protrusion of her
rubbed little rings around them. She was not stopping me. I continued to fondle her tits maki
movements were very slow so they would not be visible to Matt or his girlfriend. I don't think
seen anything even if they had looked directly at us and frankly, they were too busy playing
driver to notice.

Suddenly, Mrs. James pulled one of her arms out of the sleeping bag and reached for our dr
gulp from the stadium cup and offered it to me. I pulled a hand out and took a swig of my ow
it in the drink holder. When she pulled the sleeping bag up under her chin she unhooked her
realize that the clasp was up front but now there was no doubt that she wanted me to keep m

"Are you alright with this? She asked me.

"Yes." I stammered.

"OK. If you ever say anything to Matt or anyone else I will make you live to regret it. Before t
further, is that understood?"

I nodded my understanding and she placed my right hand squarely on her bare left boob. He
and softer than Shellie's but they were awesome. When I rolled her nipples in my fingers I co
tense up and her breathing changed. She was really starting to enjoy this. Matt had the stere
could not hear or see anything going on in the backseat. I decided to go for it. I slid my right
her crotch and waited for a rebuke. None came; instead she opened her legs to give me bet

pussy. My hard on was pushing against her lower back and was about to explode. I had to c
my body to keep pressure off my cock for fear of ejaculating right there. I continued stroking
pussy on outside of her sweat pants. I could feel her slit through the cotton material and star
long strokes up and down her hot patch.

It was clear that she was not going to stop me so I kept going. As she reached for another g
took the opportunity to untie the draw string of her sweat pants and slid my hand inside. I co
silky material of her panties as I cupped her mound. The warmth was incredible and as I pal
feel the moisture creeping through her panties. I was struck by how meaty her pussy was. P
position she was in but her mound was completely different from Shellie's.

Mrs. James repositioned my hand inside her panties and kept her hand on top of mine as I s
inside her. She held it in position as I slowly penetrated her inner folds. I could feel her walls
waves of pleasure tore through her. Shellie always loved having me circle her clit with my fir
it on Mrs. James. She reacted as if an electric shock had been applied to her.

"Don't move." I whispered. "They are going to see you."

She nodded but kept her eyes closed. From my experiences with Shellie I could tell Mrs. Jar
come. I moved my left hand inside her panties and inserted my middle finger into her as I co
with her clit. Almost instantly she came. She pinned my hands between her legs as her puss
repeatedly around my fingers. I was worried she was going to moan but she brought her har
kept completely quiet. Eventually, she relaxed and pulled my hands out of her pants and reti
hooked her bra and took another big gulp of our bourbon and coke.

Finally she tapped Matt on the shoulder and said, "Stop when you get a chance. I need to us

Feeling the moment escaping us but still having a raging erection I leaned into her ear and w
about me?"

Mrs. James reached behind her and gave my cock a little pinch and said, "Be patient young
of things but I am not a tease."

I was left to wonder what that meant for the rest of the ride home.

The religious, monastic system, founded c. 500 B.C. on the basis of pantheistic Brahminism of the Vedanta school of religious thought, in the eighth and following centuries, B.C., gave r rival schemes of salvation. These movements started with the same morbid view that consc and not worth the living, and that true happiness is to be had only in a state like dreamless s all desires, free from conscious action. They took for granted the Upanishad doctrine of the births, but they differed from pantheistic Brahminism both in their attitude towards the Vedas plan for securing freedom from rebirth and from conscious existence. In their absolute reject rites, they stamped themselves as heresies. Of these the one destined to win greatest renov

I. THE FOUNDER

Of Buddha, the founder of this great movement, legendary tradition has much to say, but ve historical worth is known. His father seems to have been a petty raja, ruling over a small cor southern border of the district now known as Nepal. Buddha's family name was Gotama (Sa was probably by this name that he was known in life. In all likelihood it was after his death th disciples bestowed on him a number of laudatory names, the most common being Buddha, Like the newborn youths of his day, he must have spent some time in the study of the sacre immemorial custom of the East, he married at an early age, and, if tradition may be trusted, prince's privilege of maintaining a harem. His principal wife bore him a son. His heart was no pleasures of the world soon palled upon him, and abandoning his home he retired to the fore hermit he spent several years in austere self-discipline, studying doubtless, the way of salva the Upanishads. Even this did not bring peace to his mind. He gave up the rigorous fasts an which nearly cost him his life, and devoted himself in his own way to long and earnest medit of which was his firm belief that he had discovered the only true method of escaping from th

rebirth and of attaining to Nirvana. He then set out to preach his gospel of deliverance, begi
Benares. His magnetic personality and his earnest, impressive eloquence soon won over to
the warrior caste. Brahmins, too, felt the persuasiveness of his words, and it was not long be
surrounded by a band of enthusiastic disciples, in whose company he went from place to pla
converts by his preaching. These soon became very numerous and were formed into a grea
Such was the work to which Buddha gave himself with unsparing zeal for over forty years. A
by his long life of activity, he fell sick after a meal of dried boar's flesh, and died in the eighti
of his age. The approximate date of his death is 480 B.C. It is noteworthy that Buddha was a
two other famous religious philosophers, Pythagoras and Confucius.

In the sacred books of later times Buddha is depicted as a character without flaw, adorned w
mind and heart. There may be some hesitation in taking the highly coloured portrait of Budd
the exact representation of the original, but Buddha may be credited with the qualities of a g
man. The records depict him moving about from place to place, regardless of personal comf
fearless, mild and compassionate, considerate towards poor and rich alike, absorbed with th
freeing all men from the bonds of misery, and irresistible in his manner of setting forth the wa
deliverance. In his mildness, his readiness to overlook insults, his zeal, chastity, and simplic
he reminds one not a little of St. Francis of Assisi. In all pagan antiquity no character has be
so noble and attractive.

II. BUDDHIST TEXTS

The chief sources for early Buddhism are the sacred books comprised in the first two divisio
Ti-pitaka (triple-basket), the threefold Bible of the Southern School of Buddhists. In India, too
Buddhists are found only in the North, in Nepal, and in the extreme South, in the island of C
represent two different schools of thought, the Northern worshipping Buddha as supreme pe
at the same time adopting most of the degrading superstitions of Hinduism, the Southern ad
measure to the original teachings of Buddha. Each school has a canon of sacred books. The
Sanskrit, the Southern in Pali, a softer tongue, into which Sanskrit was transformed by the p
South. The Southern canon, Ti-pitaka, which reflects more faithfully the teachings of Buddha
disciples, embraces

the Vinaya-pitaka, a collection of books on the disciplinary rules of the order,
the Sutta-pitaka, didactic tracts consisting in part of alleged discourses of Buddha; and
the Abhidhamma-pitaka, comprising more detailed treatises on doctrinal subjects.
Most of the Vinavas and some of the Suttas have been made accessible to English readers
of the East". The Ti-pitaka seems to date back to the second and third centuries B.C., but a
were made even after it was committed to writing in the early part of the first century of the C

While there may be doctrinal and disciplinary parts from the time of Buddha none of the twe
comprised in the Ti-pitaka can be proved to be older than 300 B.C. These books stripped of
repetitions, would be about equal in size to the Bible, though on the whole they are vastly in
Sacred Scripture in spirituality, depth of thought, variety of subject, and richness of expressi
There are also a few extra-canonical books, likewise in Pali on which the Southern Buddhist
the Dipavansa and Mahavansa, which give an uncritical history of Buddhism down to about
"Commentaries of Buddhagosa", and the Milinda Panha, ably translated by Rhys Davids un
Questions of King Milinda". These works belong to the fourth and following centuries of our

the legendary biographies of Buddha, the Buddha Charita, and the Lalita Vistara (Book of E
generally assigned to the last quarter of the first century A.D. Besides the Tri-pitaka, the No
Buddhists reckon as canonical several writings of more recent times adapted from the abom

III. PRIMITIVE BUDDHISM

Buddhism was by no means entirely original. It had much in common with the pantheistic Ve
which it sprang belief in karma, whereby the character of the present life is the net product o
evil acts of a previous existence; belief in a constant series of rebirths for all who set their he
preserving their individual existence; the pessimistic view that life at its best is misery and n
living. And so the great end for which Buddha toiled was the very one which gave colour to t
scheme of salvation propounded by the Brahmin ascetics, namely, the liberation of men fro
them free from attachment to conscious existence. It was in their conception of the final stat
and of the method by which it was to be attained that they differed. The pantheistic Brahmin

Recognize your identity with the great impersonal god, Brahma, you thereby cease to be a c
you are no longer held fast in the chain of rebirths; at death you lose your individuality, your
existence, to become absorbed in the all-god Brahma.
In Buddha's system, the all-god Brahma was entirely ignored. Buddha put abstruse speculat
background, and, while not ignoring the value of right knowledge, insisted on the saving par
the one thing needful. To obtain deliverance from birth, all forms of desire must be absolutel
only very wicked craving, but also the desire of such pleasures and comforts as are deemed
lawful, the desire even to preserve one's conscious existence. It was through this extinction
that cessation of misery was to be obtained. This state of absence of desire and pain was k
(Nibbana). This word was not coined by Buddha, but in his teaching, it assumed a new shad
means primarily a "blowing out", and hence the extinction of the fire of desire, ill-will, delusio
in short, that binds the individual to rebirth and misery. It was in the living Buddhist saint a st
repose, of indifference to life and death, to pleasure and pain, a state of imperturbable tranq

the sense of freedom from the bonds of rebirth caused the discomforts as well as the joys of
insignance. But it was not till after death that Nirvana was realized in its completeness. Som
so thought. And, indeed, if the psychological speculations found in the sacred books are par
personal teaching, it is hard to see how he could have held anything else as the final end of
consistency is not to be looked for in an Indian mystic. If we may trust the sacred books, he
refused on several occasions to pronounce either on the existence or the non-existence of t
entered into Nirvana, on the ground that it was irrelevant, not conducive to peace and enligh
intimate disciples held the same view. A monk who interpreted Nirvana to mean annihilation
by an older monk, and convinced that he had no right to hold such an opinion, since the sub
impenetrable mystery. The learned nun Khema gave a similar answer to the King of Kosala,
deceased Buddha was still in existence. Whether the Perfect One exists after death, whethe
after death, whether he exists and at the same time does not exist after death, whether he n
does not exist after death, has not been revealed by Buddha. Since, then, the nature of Nirv
mysterious to be grasped by the Hindu mind, too subtle to be expressed in terms either of ex
non-existence, it would be idle to attempt a positive solution of the question. It suffices to kn
meant a state of unconscious repose, an eternal sleep which knew no awakening. In this res
practically one with the ideal of the pantheistic Brahmin.
In the Buddhist conception of Nirvana no account was taken of the all-god Brahma. And as
to the traditional gods were held to be of no avail for the attainment of this negative state of
Buddha, with greater consistency than was shown in pantheistic Brahminism, rejected both
Vedic rites. It was this attitude which stamped Buddhism as a heresy. For this reason, too, B
set down by some as an atheist. Buddha, however, was not an atheist in the sense that he d
of the gods. To him the gods were living realities. In his alleged sayings, as in the Buddhist s
generally, the gods are often mentioned, and always with respect. But like the pantheistic Br
not acknowledge his dependence on them. They were like men, subject to decay and rebirth
might be reborn in the future in some inferior condition, while a man of great virtue might suc
himself in his next birth to the rank of a god in heaven. The very gods, then, no less than me
that perfect wisdom that leads to Nirvana, and hence it was idle to pray or sacrifice to them i
obtaining the boon which they themselves did not possess. They were inferior to Buddha, si
attained to Nirvana. In like manner, they who followed Buddha's footsteps had no need of w
by prayers and offerings. Worship of the gods was tolerated, however, in the Buddhist layma
to the delusion of individual existence, and preferred the household to the homeless state. M
system conveniently provided for those who accepted in theory the teaching that Nirvana alo
of man but who still lacked the courage to quench all desires. The various heavens of Brahm
their positive, even sensual, delights were retained as the reward of virtuous souls not yet rip
To aspire after such rewards was permitted to the lukewarm monk; it was commended to the
frequent reference, even in the earliest Buddhist writings to heaven and its positive delights
encouragement to right conduct. Sufficient prominence is not generally given to this more po

Buddha's teaching, without which his followers would have been limited to an insignificant a
band of heroic souls. It was this element, so prominent in the inscriptions of Asoka, that tem
severity of Buddha's doctrine of Nirvana and made his system acceptable to the masses.

In order to secure that extinction of desire which alone could lead to Nirvana, Buddha presc
followers a life of detachment from the comforts, pleasures, and occupations of the common
secure this end, he adopted for himself and his disciples the quiet, secluded, contemplative
Brahmin ascetics. It was foreign to his plan that his followers should engage in any form of i
pursuits, lest they might thereby be entangled in worldly cares and desires. Their means of s
alms; hence the name commonly applied to Buddhist monks was bhikkus, beggars. Detach
absolutely necessary. Married life was to be avoided as a pit of hot coals, for it was incompa
quenching of desire and the extinction of individual existence. In like manner, worldly posse
worldly power had to be renounced—everything that might minister to pride, greed, or self-i
exacting of his followers a life of severe simplicity, Buddha did not go to the extremes of fan
characterized so many of the Brahmin ascetics. He chose the middle path of moderate asce
compared to a lute, which gives forth the proper tones only when the strings are neither too
slack. Each member was allowed but one set of garments, of yellowish colour and of cheap
together with his sleeping mat, razor, needle, water-strainer, and alms bowl, constituted the
earthly possessions. His single meal, which had to be taken before noon, consisted chiefly
curry, which he gathered daily in his alms-bowl by begging. Water or rice-milk was his custo
and other intoxicants being rigorously forbidden, even as medicine. Meat, fish, and delicacie
eaten except in sickness or when the monk dined by invitation with some patron. The use of
ointments, and participation in worldly amusements fell also into the class of things prohibite
the moral code of Buddhism was little more than a copy of that of Brahminism. Like the latte
thoughts and desires, no less than to words and deeds. Unchastity in all its forms, drunken
stealing, envy, pride, harshness are fittingly condemned. But what, perhaps, brings Buddhis
in contact with Christianity is its spirit of gentleness and forgiveness of injuries. To cultivate
towards men of all classes, to avoid anger and physical violence, to be patient under insult,
for evil—all this was inculated in Buddhism and helped to make it one of the gentlest of relig
extent was this carried that the Buddhist monk, like the Brahmin ascetic, had to avoid with t
the destruction of any form of animal life.

In course of time, Buddha extended his monastic system to include women. Communities o
the monks, were entirely secluded from them. They had to conform to the same rule of life,
and spend their days in retirement and contemplation. They were never as numerous as the
became a very insignificant factor in Buddhism. In thus opening up to his fellow men and w
be the true path of salvation, Buddha made no discrimination in social condition. Herein lay
striking contrasts between the old religion and the new. Brahminism was inextricably intert

caste-distinctions. It was a privilege of birth, from which the Sudras and members of still low
absolutely excluded. Buddha, on the contrary, welcomed men of low as well as high birth an
not blood, was declared to be the test of superiority. In the brotherhood which he built aroun
caste-distinctions were put aside. The despised Sudra stood on a footing of equality with the
Brahmin. In this religious democracy of Buddhism lay, doubtless, one of its strongest influen
conversion among the masses. But in thus putting his followers on a plane of equal conside
no intention of acting the part of a social reformer. Not a few scholars have attributed to him
breaking down caste-distinctions in society and of introducing more democratic conditions. B
intention of abolishing caste than he had of abolishing marriage. It was only within the limits
order that he insisted on social equality just as he did on celibacy. Wherever Buddhism has
caste-system has remained untouched.

Strictly speaking, Buddha's order was composed only of those who renounced the world to l
contemplation as monks and nuns. The very character of their life, however, made them dep
of men and women who preferred to live in the world and to enjoy the comforts of the house
who thus sympathized with the order and contributed to its support, formed the lay element i
Through this friendly association with the order, they could look to a happy reward after deat
but the temporary de!ights of heaven, with the additional prospect of being able at some futu
attain to Nirvana, if they so desired. The majority, however, did not share the enthusiasm of
Arhat or saint for Nirvana, being quite content to hope for a life of positive, though imperman
heaven.

IV. LATER DEVELOPMENTS AND SPREAD OF BUDDHISM

The lack of all religious rites in Buddhism was not keenly felt during the lifetime of its founde
devotion to him took the place of religious fervour. But he was not long dead when this very
began to assume the form of religious worship. His reputed relics, consisting of his bones, te
cremation-vessel, and ashes from his funeral pyre, were enclosed in dome-shaped mounds
Topes, or Stupas, and were honoured with offerings of lights, flowers, and incense. Pictures
Buddha were multiplied on every side, and similarly honoured, being carried about on festal
procession. The places, too, associated with his birth, enlightenment, first preaching, and de
accounted especially sacred, and became the objects of pilgrimage and the occasion of recu
as Buddha had entered into Nirvana and could not be sensible of these religious honours, th
a living personality to whom the people could pray. The later speculations of Buddhist monk
personality to light in Metteyya (Maitreya), the loving one, now happily reigning in heaven as
a divine being destined in the remote future to become a Buddha, again to set in motion the
To this Metteyya the Buddhists turned as the living object of worship of which they had so lo
and they paid him religious homage as the future saviour of the world.

The emergence of the Northern School

Such was the character of the religious worship observed by those who departed the least fr
teachings. It is what is found today in the so-called Southern Buddhism, held by the inhabita
Burma, and Siam. Towards the end of first century A.D., however, a far more radical change
religious views of the great mass of Buddhists in Northern India. Owing, doubtless, to the ev
popularity of the cults of Vishnu and Siva, Buddhism was so modified as to allow the worshi
supreme deity, Adi-Buddha, of whom the historic Buddha was declared to have been an inca
Around this supreme Buddha dwelling in highest heaven, were grouped a countless number
destined in future ages to become human Buddhas for the sake of erring man. To raise ones
bodhisattva by meritorious works was the ideal now held out to pious souls. In place of Nirva
became the object of pious longing, the heaven of sensuous pleasures, where Amitabha, an
eternal Buddha, reigned. For the attainment of Sukhavati, the necessity of virtuous conduct
forgotten, but an extravagant importance was attached to the worship of relics and statues,
above all, to the reciting of sacred names and magic formulas. Many other gross forms of Hi
were also adopted. This innovation, completely subversive of the teaching of Buddha, suppl
system in the North. It was known as the Mahayana, or Great Vehicle, in distinction to the ot
form of Buddhism contemptuously styled the Hinayana or Little Vehicle, which held its own i
only by the few millions of Southern Buddhists that the teachings of Buddha have been subs

Buddha's order seems to have grown rapidly, and through the good will of rulers, whose infe
debarred them from Brahmin privileges, to have become in the next two centuries a formida
older religion. The interesting rock-edicts of Asoka—a royal convert to Buddhism who in the
the third century B.C. held dominion over the greater part of India—give evidence that Budd
flourishing condition, while a tolerant and kindly spirit was displayed towards other forms of
his auspices missionaries were sent to evangelize Ceylon in the South, and in the North, Ka
and the so-called Yavana country, identified by most scholars with the Greek settlements in
and vicinity, and later known as Bactria. In all these places Buddhism quickly took root and f
though in the Northern countries the religion became later on corrupted and transformed into
of worship.

Buddhism in China

In the first century of the Christian Era, the knowledge of Buddha made its way to China. At
the Emperor Ming-ti, Buddhist monks came in A.D. 67 with sacred books, pictures, and relic
multiplied, and during the next few centuries the religious communications between the two

close. Not only did Buddhist missionaries from India labour in China, but many Chinese mor for the newly adopted religion by making pilgrimages to the holy places in India. A few of the interesting accounts, still extant, of what they saw and heard in their travels. Of these pilgrim noted are Fahien, who travelled in India and Ceylon in the years A.D. 399-414, and Hiouen- extensive travels in India two centuries later (A.D. 629-645). The supplanting of the earlier fo in the northern countries of India in the second century led to a corresponding change in the China. The later missionaries, being mostly from the North of India, brought with them the no in a short time the Mahayana or Northern Buddhism prevailed. Two of the bodhisattvas of M became the favourite objects of worship with the Chinese—Amitabha, lord of the Sukhavati Avalokitesvara, extravagantly praised in the "Lotus of the True Law" as ready to extricate fro danger those who think of him or cherish his name. The latter, known as Fousa Kwanyin, is male deity, again as the goddess of mercy, who comes to the relief of the faithful. Amitabha Chinese name Amita, or Mito. Offerings of flowers and incense made before his statues and repetition, of his name are believed to ensure a future life of bliss in his distant Western para excessive devotion to statues and relics, the employment of magic arts to keep off evil spirits observance of many of the gross superstitions of Taoism, complete the picture of Buddhism representation of what Buddha made known to men. Chinese Buddhism was introduced into century, and from there taken to Japan two centuries later. The Buddhism of these countries like that of China, with the addition of a number of local superstitions. Annam was also evan Chinese Buddhists at an early period.

Tibetan Buddhiism (Lamaism)

Buddhism was first introduced into Tibet in the latter part of the seventh century, but it did no thrive till the ninth century. In 1260, the Buddhist conqueror of Tibet, Kublai Khan, raised the monk of the great Sakja monastery, to the position of spiritual and temporal ruler. His moder the title of Dalai Lama. Lamaism is based on the Northern Buddhism of India, after it had be with the disgusting elements of Siva worship. Its deities are innumerable, its idolatry unlimite much given to the use of magic formulas and to the endless repetition of sacred names. Its f is, Om mani padme hum (O jewel in the lotus, Amen), which, written on streamers exposed multiplied on paper slips turned by hand or wind or water, in the so-called prayer-wheels, is secure for the agent unspeakable merit. The Dalai Lama, residing in the great monastery at the incarnation of Amitabha, the Buddha of the Sukhavati paradise. Nine months after his de babe is selected by divination as the reincarnate Buddha.

Catholic missionaries to Tibet in the early part of the last century were struck by the outward to Catholic liturgy and discipline that were presented by Lamaism—its infallible head, grades corresponding to bishop and priest, the cross, mitre, dalmatic, cope, censer, holy water, etc.

were raised proclaiming the Lamaistic origin of Catholic rites and practices. Unfortunately fo
theory, the Catholic Church was shown to have possessed these features in common with t
churches long before Lamaism was in existence. The wide propagation of Nestorianism ove
Asia as early as A.D. 635 offers a natural explanation for such resemblances as are accretio
Buddhism. The missionary zeal of Tibetan lamas led to the extension of their religion to Tata
and following centuries. While Northern Buddhism was thus exerting a widespread influence
Eastern Asia, the earlier form of Buddhism was making peaceful conquests of the countries
South. In the fifth century missionaries from Ceylon evangelized Burma. Within the next two
spread to Siam, Cambodia, Java, and adjacent islands.

Statistics

The number of Buddhists throughout the world is commonly estimated at about four hundre
that is, about one-third of the human race. But on this estimate the error is made of classing
and Japanese as Buddhists. Professor Legge, whose years of experience in China give spe
judgment, declares that the Buddhists in the whole world are not more than, one hundred m
outnumbered not only by Christians, but also by the adherents of Confucianism and Hinduis
Williams holds the same views. Even if Buddhism, however, outranked Christianity in the nu
it would be a mistake to attribute to the religion of Buddha, as some do, a more successful p
to the religion of Christ. The latter has made its immense conquests, not by compromising w
superstition, but by winning souls to the exclusive acceptance of its saving truths. Wherever
it has maintained its individuality. On the other hand, the vast majority of the adherents of Bu
to forms of creed and worship that Buddha, if alive, would reprobate. Northern Buddhism be
opposite of what Buddha taught to men, and in spreading to foreign lands accommodated its
superstitions of the peoples it sought to win. It is only the Southern Buddhists of Ceylon, Bur
who deserve to be identified with the order founded by Buddha. They number at most but th
souls.

V. BUDDHISM AND CHRISTIANITY

Between Buddhism and Christianity there are a number of resemblances, at first sight strikin

The Buddhist order of monks and nuns offers points of similarity with Christian monastic sys
the mendicant orders.
There are moral aphorisms ascribed to Buddha that are not unlike some of the sayings of Ch
Most of all, in the legendary life of Buddha, which in its complete form is the outcome of man
accretion, there are many parallelisms, some more, some less striking, to the Gospel stories

A few third-rate scholars taking for granted that all these resemblances are pre-Christian, an
fallacious principle that resemblance always implies dependence, have vainly tried to show t
monasticism is of Buddhist origin, and that Buddhist thought and legend have been freely in
Gospels. To give greater speciousness to their theory, they have not scrupled to press into s
the few bona fide resemblances many others that were either grossly exaggerated, or fictitio
Buddhist sources less ancient than the Gospels. If, from this vast array of alleged Buddhist i
all these exaggerations, fictions, and anachronisms are eliminated, the points of resemblanc
with perhaps one exception, such as may be explained on the ground of independent origin.

The exception is the story of Buddha's conversion from the worldly life of a prince to the life
which was transformed by some Oriental Christian of the seventh century into the popular m
"Barlaam and Josaphat". Here is historic evidence of the turning of a Buddhist into a Christia
as, on the other hand, the fifth-century sculptures of Gospel scenes on the ruined Buddhist r
Jamalgiri, in Northern Panjab, described in the scholarly work of Fergusson and Burgess, "T
India", offer reliable evidence that the Buddhists of that time did not scruple to embellish the
with adaptations from Christian sources.

But is there any historical basis for the assertion that Buddhist influence was a factor in the f
Christianity and of the Christian Gospels? The advocates of this theory pretend that the rock
Asoka bear witness to the spread of Buddhism over the Greek-speaking world as early as th
since they mention the flourishing existence of Buddhism among the Yavanas, i.e. Greeks w
Antiochus. But in the unanimous judgment of first-rate scholars, the Yavanas here mentione
solely the Greek-speaking peoples on the extreme frontier next to India, namely, Bactria and
Again the statement in the late Buddhist chronicle, Mahavansa, that among the Buddhists w
dedication of a great Stupa in Ceylon in the second century B.C., "were over thirty thousand
vicinity of Alassada, the capital of the Yona country" is taken to prove that long before the tir
Alexandria in Egypt was the centre of flourishing Buddhist communities. It is true that Alassa
for Alexandria; but the best scholars are agreed that the city here meant is not the ancient ca
but as the text indicates, the chief city of the Yona country, the Yavana country of the rock-in
namely, Bactria and vicinity. And so, the city referred to is most likely Alexandria ad Caucasu

In short, there is nothing in Buddhist records that may be taken as reliable evidence for the s
Buddhism westward to the Greek world as early as the foundation of the Christian religion. T
institutions were at that time unknown in the West may be safely inferred from the fact that B
absolutely ignored in the literary and archaeological remains of Palestine, Egypt, and Greec
single remains of Buddhist monastery or stupa in any of these countries; not a single Greek
Buddhist book; not a single reference in all Greek literature to the existence of a Buddhist co
Greek world. The very name of Buddha is mentioned for the first time only in the writings of

Alexandria (second century). To explain the resemblances in Christianity to a number of pre
of Buddhism, there is no need of resorting to the hypothesis that they were borrowed. Nothi
in the study of comparative ethnology and religion than to find similar social and religious cu
by peoples too remote to have had any communication with one another. How easily the pri
detachment from the world may lead to a community life in which celibacy as observed, may
monastic systems that have prevailed not only among Buddhists, Essenes, and Christians, l
early Aztecs and Incas in the New World. Nor is this so strange when it is recalled that men
to a large extent, the same daily experiences, the same feelings, the desires. As the laws of
are every here the same, it lies in the very nature of things that men, in so far as they have t
experiences, or face the same religious needs, will think the same thoughts, and give expres
sayings and customs that strike the unreflecting old server by their similarity. It is only by los
this fundamental truth that one can unwittingly fall into the error of assuming that resemblan
implies dependence.

It is chiefly the legendary features of Buddha's life, many of which are found for the first time
works of later date than the Gospels, that furnish the most striking resemblances to certain i
of Christ in the Gospels, resemblances which might with greater show of reason be traced to
origin. If there has been any borrowing here, it is plainly on the side of Buddhism. That Chris
its way to Northern India in the first two centuries is not only a matter of respectable tradition
supported by weighty archaeological evidence. Scholars of recognized ability beyond the su
bias in favour of Christianity—Weber, Goblet d'Alviella, and others—think it very likely that th
stories of Christ circulated by these early Christian communities in India were used by the B
enrich the Buddha legend, just as the Vishnuites built up the legend of Krishna on many stri
the life of Christ.

The fundamental tenets of Buddhism are marked by grave defects that not only betray its in
religion of enlightened humanity, but also bring into bold relief its inferiority to the religion of
Christ. In the first place, the very foundation on which Buddhism rests—the doctrine of karm
transmigrations—is gratuitous and false. This pretended law of nature, by which the myriads
men, and animals are but the transient forms of rational beings essentially the same, but for
diversity in consequence of varying degrees of merit and demerit in former lives, is a huge s
flat contradiction to the recognized laws of nature, and hence ignored by men of science. An
in primitive Buddhism is its failure to recognize man's dependence on a supreme God. By ig
making salvation rest solely on personal effort, Buddha substituted for the Brahmin religion a
colourless system of philosophy. It is entirely lacking in those powerful motives to right cond
particularly the motive of love, that spring from the consecration of religious men and women
dependence on a personal all-loving God. Hence it is that Buddhist morality is in the last ana
utilitarianism. There is no sense of duty, as in the religion of Christ, prompted by reverence f

Lawgiver, by love for a merciful Father, by personal allegiance to a Redeemer. Karma, the b
morality, is like any other law of nature, the observance of which is prompted by prudential c
Not infrequently one meets the assertion that Buddha surpassed Jesus in holding out to stru
end utterly unselfish. This is a mistake. Not to speak of the popular Swarga, or heaven, with
even sensual delights the fact that Nirvana is a negative ideal of bliss does not make it the le
of interested desire. Far from being an unselfish end, Nirvana is based wholly on the motive
thus stands on a much lower level than the Christian ideal, which, being primarily and essen
friendship with God in heaven, appeals to motives of disinterested as well as interested love

Another fatal defect of Buddhism is its false pessimism. A strong and healthy mind revolts ag
view that life is not worth living, that every form of conscious existence is an evil. Buddhism
condemned by the voice of nature the dominant tone of which is hope and joy. It is a protest
for possessing the perfection of rational life. The highest ambition of Buddhism is to destroy
by bringing all living beings to the unconscious repose of Nirvana. Buddhism is thus guilty of
against nature, and in consequence does injustice to the individual. All legitimate desires mu
Innocent recreations are condemned. The cultivation of music is forbidden. Researches in n
discountenanced. The development of the mind is limited to the memorizing of Buddhist text
Buddhist metaphysics, only a minimum of which is of any value. The Buddhist ideal on earth
passive indifference to everything. How different is the teaching of Him who came that men
have it more abundantly. Again Buddhist pessimism is unjust to the family. Marriage is held
even abhorrence as leading to the procreation of life. In thus branding marriage as a state u
Buddhism betrays its inferiority to Christianity, which recommends virginity but at the same t
marriage is a sacred union and a source of sanctification. Buddhist pessimism likewise does
society. It has set the seal of approval on the Brahmin prejudice against manual labor. Since
worth living, to labour for the comforts and refinements of civilized life is a delusion. The perf
to subsist not by the labour of his hands but on the alms of inferior men. In the religion of Ch
carpenter's son", a healthier view prevails. The dignity of labour is upheld, and every form of
encouraged that tends to promote man's welfare.

Buddhism has accomplished but little for the uplifting of humanity in comparison with Christia
most attractive features, which, unfortunately, has become wellnigh obsolete, was its practic
towards the sick and needy. Between Buddhists and Brahmins there was a commendable ri
dispensaries of food and medicine. But this charity did not, like the Christian form, extend to
nursing of unfortunates stricken with contagious and incurable diseases, to the protection of
the bringing up of orphans, to the rescue of fallen women, to the care of the aged and insan
hospitals in this sense are unknown to Buddhism. The consecration of religious men and wo
service of afflicted humanity is foreign to dreamy Buddhist monasticism. Again, the wonderfu
displayed by the religion of Christ in purifying the morals of pagan Europe has no parallel in

annals. Wherever the religion of Buddha has prevailed, it has proved singularly inefficient to
a high standard of morality. It has not weaned the people of Tibet and Mongolia from the cus
the aged, nor the Chinese from the practice of infanticide. Outside the establishment of the c
has done next to nothing to raise woman from her state of degradation in Oriental lands. It h
utterly helpless to cope with the moral plagues of humanity. The consentient testimony of wi
suspicion of prejudice establishes the fact that at the present day Buddhist monks are every
deficient in that moral earnestness and exemplary conduct which distinguished the early foll
In short, Buddhism is all but dead. In its huge organism the faint pulsations of life are still dis
but its power of activity is gone. The spread of European civilization over the East will inevita
about its extinction.

Their devotion to and concentration on the completion of this project, on a voluntary basis, a
appreciated.

Translator's Introduction

Originally, one's own mind and nature are pure, and there is nothing to accept and nothing t

neither existence nor non-existence; there is only clear understanding without attachment ar
dwelling. One who wants to know the no-attachment, no-dwelling mind can find it through m
is only then that the mind does not think of right and wrong, of good and evil or of self and o

If this seems obscure, then consider the following: The past is already gone; when you do n
thought of the past is gone, too. Then, there is no past nor any thought of the past. Furtherm
has yet not arrived. If you do not wish for nor seek after it, the thought regarding the future v
Then, there is no future nor any thought about the future. Finally, the present is already pres
grasping at it or dwelling upon it and without there being any thought about it, the thought of
disappears, and there is no present nor any thought of the present. The mind that does not
whatsoever is known as the True Mind or Original Nature.

The non-dwelling mind is the mind of the Buddha, it is the mind of liberation, it is the mind of
is the mind of non-birth. So, if you really want meditation to come about, sit properly erect ar
eyes. Then purify your mind, lay down everything and think of neither good nor evil. Just obs
thoughts. As you look for their place of origin, you discover that they suddenly rise up and ju
disappear, and that this process goes on and on. Be patient and continue to observe them,
time, know the thoughts to be devoid of any self-nature; also you will, thereby, know original
not attempt to follow the thoughts, to trace them in any way or have any intention of getting
and, in time, awareness will manifest as your mind illumines a thought. Then, there will sudd
stillness that becomes suchness. At some point, another thought will arise, and you will obs
same way.

Do this at least once a day, sitting from fifteen minutes to an hour. As your concentration de
thoughts slow down and diminish in number, and your power of illumination increases until y
out that not a single thought arises. Then, there is only stillness and voidness, for then the m
and pure. This is your self-nature as known directly through wisdom (Prajna).

The subject of wisdom is Prajna, and the opposite of Prajna is ignorance. Prajna illuminates
is ignorance. With continued exposure to Prajna, ignorance wears away bit by bit until there
self-nature, or pure mind. It is in this situation that Right Thought manifests. There is no long
duality of subject/object. This state is also known as no-thought or suchness and is also refe
inconceivable. When the mind is illumined and a thought, as one ordinarily knows it to be, ar
dissolves instantly. Continue to practice in this way on a daily basis, and you will notice your
getting steadily clearer and purer. Then there will be no longer any need to observe, nor will
purpose to observe. Indeed, there will be no longer any need of any kind. It will be realized t
no-mind, that no-mind is pure mind and that pure mind is the true mind. At that time, the sou
and the role of thought will be finished. It cannot be expressed in words, and yet it is as simp

water and knowing whether it is cold or warm. It is called Sudden Enlightenment.

It is my express wish that this guide, based on the meditation manual of Ting Chen, will prov
imparting the Dharma to its readers. In helping me reach this goal, I wish to thank Sam Lang
G. French, without whose help regarding fine points in the translation and without whose edi
this task might have proved too difficult. May this work, then, help everyone to generate the
never to regress.

The Foundation Of Meditation Practice

Why Meditate?

When you are caught up in the emotional upheaval of greed, anger and delusion, you may f
succumbing to some very real physical ailments; and when you are ill, the world may seem t
place. That is not to say, however, that all of our illnesses are due to extreme emotions. Exp
substances to which you may be allergic can alter everything about you. It can cause violent
depression, hallucinations and all sorts of physical effects, including actual tissue damage. V
cause, disease is most often accompanied by an assortment of disruptive emotions. Progran
designed to make therapeutic use of relaxation methods and meditation have proved to be e
both the physical effects and the emotions which accompany them. Yet, as beneficial as the
methods can take one only so far.

In the Buddhist tradition, meditation is used to defuse the source of all the trouble-the illusion
other. In Ch'an (or Zen), the aim is to overcome thought and defilement. Having done this, a
no longer stirring, the real substance of mind becomes evident. Without thoughts and withou
self and other, greed, anger and hatred have no place to arise; and the energy that was tied
illusions becomes available, helping to provide an overall improvement in health. That is why
called The Fundamental Practice.
The Psychophysiological Effects Of Meditation

The Russian physiologist, Ivan Pavlov (1849-1936), emphasized the role that the cerebrum
At first glance, one might assume this to be merely a statement of fact, because that part of

usually thought to involve little else other than thinking. Actually, it takes part in the productio
hormones, both directly and indirectly. Every aspect of a person is interrelated, and that is h
thoughts and emotions can have such far-reaching effects. That is, however, also why medi
calm-inducing thoughts can be so stabilizing and so healthy. One can safely assume, then, t
contributes to proper functioning also contributes to good health.

Useful Hints For Better Practice And Better Health

As you progress in your practice, you are required to sit motionless for longer and longer pe
a stretch. It is then that some very important physical limitations may oblige you to make som
the way that you sit. Should you choose to ignore them, thinking that there is just one right w
you may cause yourself needless pain and distraction (which means that you will not be able
and you may possibly expose yourself to irreparable physical damage as well.

It is not unusual for people who have gone on retreats to return with painfully damaged knee
position in spite of pain and having welcomed an ensuing numbness, simply because they h
they can remedy. To paraphrase The Kalama Sutra, "Do not do something because you hav
so, but try it and find out how it works for you." Be always on guard for what doesn't seem to
right, and see what might be done about it. There are many, many methods that can be tried
to have to submit to pain or outright debility, especially when nothing good can come of it.

The Relationship Between Mind And Meditation

The metaphor of the mirror, often referred to in Ch'an, is most suitable here in pointing out th
aspects of meditation as practiced in this tradition. The mirror-mind does not respond at all,
this lack of agitation that all things are clearly known. This is how the mind is said to be when
clinging. The mind, to be like a mirror, must be passive, detached, uninterested and quiet. It
rest, recuperation and of learning to be undefiled in the midst of what is normally defiling. Wh
perturbation in the mind, just as when there are no ripples on the surface of a lake, all things
clearly, leaving no trace. There are no intentions, and there is no action to be taken or not ta
no dependence upon anything that you do or do not do. Meditation just unfolds naturally as
tranquil.

Concentration

If you make the sun's rays converge, using a magnifying glass, and focus the resulting point
sheet of paper, you can easily burn a hole through it. Similarly, when you concentrate your t
empowered in many ways. A lay Buddhist, Yang Jen San, once found a copy of The Surang
bookstore. He was overjoyed. It was just what he had been looking for. He sat down and rea
complete absorption, oblivious to his surroundings, until someone called him. Suddenly he r

record, and numerous physicians include it in programs for their patients' recoveries.
The average person's mind is in turmoil. He or she is the product of deep-rooted patterns of
from karma accumulated since time immemorial, as well as being tortured by the illusion of
enlightened is to be free of all of that. Concentration already reduces the turmoil by limiting c
attention to just one thing. Through this practice, the apparent hold that you have on your illu
and things gives way until there is meditation. Then, there is an absence of thought and an a
Then, without the stress and the strain of delusion, a very deep sort of healing takes place.
Meditation And Dhyana

In Buddhism, the ordinary man is seen as leading a life steeped in suffering through the defi
anger and delusion. It is only when he finds out, firsthand, that there is, indeed, nothing that
is free of defilement and suffering and that there is a way out of it all, that he may become su
well-motivated to gain that freedom. This is traditionally likened to the discovery that the pret
rope that one has found and treasures is actually a very poisonous snake. When that is your
may have such a profound understanding of Buddhadharma that your life will turn around ra
realize beyond all doubt that, though the body may be strong and healthy, it still changes an
may realize deeply, by breaking off attachment to both body and mind, that birth, death, and
no longer exist. In the Ch'an tradition, this is discovered through meditation.

Discipline (sila), and wisdom (prajna)are closely related to meditation (dhyana). Proper disci
dhyana,and dhyanagives rise to wisdom.It is by means of discipline that the defilements are
this eases the way for the cultivation of dhyana(established in the same region as prajna). T
Ting(Chinese for dhyana-related meditative practice) is said to be secluded from defilement
the result of self-discipline. To free oneself from defilements is the main purpose of the pract
discipline. By means of discipline, defilements are dispelled. Then, dhyanacan become esta
variously as voidness, the absence of subject and object, Ch'an Ting,or that which is not of t
suffering, it is the access route to wisdom (prajna).

The Levels Of Buddhist Discipline

Also Known as Cumulative Discipline

Formally stated, the sevenfold assembly consists of the upasaka(male lay devotee), upasika
siksamana(female candidate for novitiate), sramanera(novice monk), sramanerika(novice nu
ordained monk), and bhikhuni(fully ordained nun). These terms designate levels of commitm
starting with the basic five precepts, or training rules, for laity.

Not formally stated, but of equal importance, is the vow to do good and refrain from doing ev
should always be for the benefit of all sentient beings. The thrust of Buddhist discipline is a b
coexistence with the rest of the world, as well as improved mindfulness and inner peace. Th
uphold the precepts. One is called stop and hold,which means that one should stop,or refrai
and holdto the precepts. The second one is called to do and to hold.This simply means that
and abide by the discipline. The discipline has the function of helping you avoid evil and do g
upholding it enables you to purify your body and mind. While that is being accomplished, the
impurities, or asrava,diminishes; and these conditions, in turn, facilitate samadhi.

Dhyanais absorption meditation at varying levels; when extended over long periods of time,
referred to as samadhi. These levels (usually four) are accounted for in Ch'an practice, and
well, several different kinds of Ch'an. There are, for example, mundane Ch'an, supra-munda
Ch'an of the highest Mahayana realization, to mention only three.

Meditation can be practiced while sitting, standing, walking or lying down and anywhere in b
because our minds are ordinarily so very disorganized, the best way to practice for most of u
regularly in a quiet place. Having seated yourself, simply put everything else aside and conc

The early sages emphasized that a moment of meditation honors Buddha more than buildin
the sandgrains in the Ganges River. The pagodas, it is argued, can be demolished, unlike th
that transcends time and space.

It cannot be repeated often enough that very little can be achieved without observing the pre
discipline dispels the attachment and the suffering that accompany it and leads to the passio
to Nirvana. Anasrava,or passionless purity, is the opposite of asrava,the outflow of the passi
filth. Asravais further known as the discharge of mind-energy leading to the loss of truth. Ana
definition, means the absence of outflow and seclusion from the stream of passion and, thus
of suffering.

Preparing For Meditation

The Posture

Find an uncluttered, well-ventilated (non-drafty), quiet place where you can sit undisturbed c
schedule. You may use a cover to protect yourself from the cold.

In the beginning, let comfort be your guide. Make sure you set up a schedule you can live w
to it faithfully. Adjust your sittings so that there is no excess of discomfort or pain, which inclu
finding a posture you can hold for a period of time that you will gradually extend. Learn to re
do not try to control anything, and do not expect anything.
Make sure the garments you wear are comfortable and loose, and wear as few of them as c
Loosen your belt or whatever might be binding or distracting, such as a wristwatch, jewelry o
actually no need for adornments, and their use during meditation should be avoided.

The Legs

If, and only if, you can manage it, sit on the full-lotus, which is the traditional position conside
stable. For those who might want to try the full-lotus position, do as follows. First, sit on the
low cushion and fold your right leg in front of you, pulling it in close to your groin. Next, fold y
leg over it, with your left foot resting, sole upward, on your right thigh and close to your groin
lift your right foot, sole up, onto your left thigh, bringing it in close to your groin. You may be
maintain this position for a short time at first, but, as you grow accustomed to it, you may fin
contributing greatly to a sense of quiet, tranquillity and stability.

Sitting in the half-lotus position does not provide as firm a base because only one knee is we
the opposite leg. To compensate for this, switch the position of your legs, if you can, with ea
you find that this proves too difficult to do immediately, set aside time to gently lengthen the

becoming increasingly quiet, your breath becoming more subtle and your muscles becoming
meditation ensues quite naturally.

Chest, Abdomen, Buttocks

Raise your chest a little, moving it forward, and sit so that the hollow part of your chest, the p
at about the level of the base of your sternum (the den of your heart), permits your diaphrag
unimpeded. Newcomers to meditation often experience obstruction and discomfort in the ch
usually caused by the den of the heart not being low enough. Should that occur, focus your
abdomen and refrain from any effort; you should feel relief in a short time. Your buttocks sho
protruding a little, and your back should be comfortably, easily erect. Sit relaxed and self-con
settling into your lower abdomen. This practice has been found to be especially calming.

Hands

Sitting in the half-lotus position, make sure your right foot is on top of your left thigh. Your pa
turned up, with the back of your right hand resting in the palm of your left, while the back of y
rests at about the level of your tan-t'ien(or the lower part of your abdomen).

In the full-lotus position, the legs are crossed a little above the ankles, with the left leg upper
the back of your left hand is cradled at the place where your legs cross.
When these positions become natural and comfortable, there is usually an accompanying se
and tranquillity.

Natural Breathing

The abdomen relaxes and expands as you inhale and contracts as you exhale. This is, inde
you exhale, the diaphragm moves upward into the chest, while the abdomen simultaneously
contraction not only assists in evacuating the lungs, but also stimulates blood circulating thro
contained in the abdominal cavity by compressing the viscera.

Right Breathing

The abdomen is contracted as you inhale, and it relaxes as you exhale. This sort of breathin
China since ancient times as a kind of physical and mental hygiene. Try both methods to dis
advantages each seems to hold for you, the practitioner, lest you get caught up in having to
happen in only a certain way.

Breathing Practice

While you are relaxed, it becomes profoundly evident that breathing simply goes on and tha
knowing that it does. You can intentionally breathe in a certain way, but the need for doing s
some external circumstances bringing about the need for the intention, so that the matter of
somewhat obviated; thus, intention seems to come about almost capriciously, in spite of you
This paradox exists in everything that we do. Meditation takes place in the absence of thoug
think that without thought there can be no meditation. Perhaps the answer to this conundrum
sequence of two separate events rather than in what seems their apparent opposition. For e
actively paying attention to your breath, you cannot be calm; and so you are advised simply
can ensue. Meditation is distinguished by absence of thought and a very characteristic sort
neither of which can be brought about at will. Control must first be relinquished. You circuito
about by applying whatever you may have discovered about relaxation, and that is the full e
your will. The following rule holds true, whether you practice natural breathing or right breath
sit down to meditate, sit easily erect, breathing through your nose.

At first, your breathing may be rapid and shallow. As you relax and have the attitude of neith
rejecting whatever arises, your breathing slows down and deepens until you find that you inh
a cycle, once every minute. Ease may be conceived of as the standard. At no time should a
or uncomfortable; rather, it should all just happen free of any concern on your part.

As you continue to sit, your breath grows finer and finer. You should devote, at the very leas
each morning and each evening to this breathing-relaxation practice. Practice as often as yo
rest of the day, wherever and whenever you happen to think of it. As the breath slows and b
subtle, the mind stabilizes and grows calm.
As the mind goes, so goes the breath. To illustrate this, four kinds of breath are noted as ev
course of practice:

* The first is called windy breathto describe the sound that you make as you breathe.
* The second is known as gasping breath. Here, you no longer make any sound when you b
feeling that you cannot inhale enough.
* In the third type of breathing, the breath is even and silent and without any obstruction, but
to feel calm. This is called air breath. These first three ways of breathing are still rough-hewn
show signs of unrest.
* When there is neither sound nor obstruction, neither roughness nor softness, and in that ve
when you do not feel that you are breathing at all and breathing evokes no association of an
achieved the fourth kind of breath, silent breath.

It is the breath that harmonizes. If you find that you easily grow calm and that your breath qu
fine, this indicates that your mind is easily stabilized. With continued practice, it may take on
moments for your breath to be regulated, and then the need to breathe will diminish and van
that, you will no longer be disturbed by anything. Your mind, at this stage, is said to be quiet
On the way to this trouble-free state, however, there is bound to be much discomfort and res
persists, and to help to harmonize the breath, you can try the following methods, progressin
next as you grow proficient. Very relaxedly and unconcernedly count from 1 to 10 in all of the

* Count your breaths, calling one exhalation and inhalation just one breath;
* Count only your inhalations;
* Count only your exhalations.

When you have reached ten, resume counting from number one. Gradually, as your skill dev
able to count to one hundred in ten groups of ten, without having your mind wander and with
sleep. However, should that happen, you are required to return to one and start all over aga
more at ease, your mind and breath will, slowly and peacefully, become interdependent. Co
sleepiness decrease in all three breathing methods of concentration, and the mind is calmed

When the goals of breath-counting have been reached, your next step will be to trace your b
this time, will be very calm and very concentrated. By tracing your breath, this calm and this
deepen until the breath is felt to enter and leave through all of your pores. As you continue i
will come to experience yourself dissipating like a cloud and melting away like a fog, until the
but voidness. When this happens, you find yourself freed of all sorts of illness, as the mind is
on a new, deeper level of quiet; and it is then that it is time to dispense with the method of tr
breath.

Regulating the Mind

Meditation can improve your health, but its primary purpose is to enable you to be free of t
because when this has occurred, wisdom shines brightly. With that aim in mind, then, we se
the breath and tracing the breath are methods of regulating the breath and thereby the mind
concentrated in this way, your thoughts are no longer confused or disordered. That is why p
racing minds or who are involved in emotional turmoil are assigned the simple task of counti
It calms them in body, breath and mind. In body, they grow relaxed and free of tension, the b
and deepens, and the mind grows quiet, calm and unperturbed.

As one continues in this practice, all but the finer states of mind disappear. Then, it is time to
the mind, for now it has become much less erratic. There are many methods of approach, bu

favored is to have one rest his or her attention on just one point, and to consider any though
be like actors that appear on a stage and then leave. This attitude of passivity, of taking part
in what is happening, leads to concentration. Therefore, when you have succeeded in conce
of your choice, you are also free of disturbing thoughts; and, with continued concentration, t
finds, as well, that fewer disturbing thoughts arise for the rest of the day. So, concentrate u
relaxedly be aware of the tip of your nose, your navel or the point an inch and a half below it
known as the tan t'ien,because your mind needs something to occupy it. Traditionally, in this
mind is said to be like a monkey that has been restricted to a small space, where it can no lo
skip about.

Two things plague you most when you are preparing the ground, as it were, from which med

1. When you first sit down, your mind is restless and unstable. You are pulled in all direction
succeed one moment and frustrated when things don't turn out the way you want the next. Y
first in one place and then in another, so that all of your time is taken up trying to escape the
consoling yourself, or both. You may imagine yourself elsewhere, participating in events tha
in your life, or that events that are somehow important to you are taking place again. You ma
dozing off over and over again.

2. Through continuing practice, your mind becomes more settled, and discriminating though
there is still confusion, and you easily tire and doze off. It is to deal with these problems that
sense the point an inch and a half below your navel and about an inch and a half in, which is
called the tan t'ien. This will not only correct your disordered thought and keep you from drift
reverie, but it also has a recognized physiologically stabilizing effect that results in mental an
health as well. Again, you have to find the point to concentrate on that works for you. It migh
your nose, your navel or the point an inch and a half below it. Whatever you choose to do, h
it for the duration of the time that you have set aside for sitting. Beginners, especially, should
practice more successful by finding the time to meditate when they are most alert, by elimina
and distraction and, most of all, by understanding the purpose of it all.

Insight Meditation

The method of concentration described thus far, in which you are to return to your object of
when you discover that you are caught up in discriminating thought, is a shallow way to grow
wandering thoughts, because it involves thinking about the thoughts that arise, which is like
fire. It is not really a means of reaching calm, then, and so you must eventually abandon tha
one more step to insight meditation. Ordinarily, you use your eyes to look outside. In this app
literally put aside everything; close your eyes and observe and/or feel your discriminating tho

do, you will soon find you cannot hold onto them, dissolve them or send them away. Once th
realized and you no longer struggle to hold onto them, dissolve them or send them away, yo
stillness and emptiness. When this insight develops and you reflect in this way on a thought
quickly disappears and is replaced by voidness. This marks the creation of a radically new v
mind can work.

When you first set out to meditate, it may seem that your thought has lessened. After you ha
awhile, however, you will most likely feel that it has increased. What has actually increased i
realization of what has really been so right along, and this immediate and continuous source
serve as a lighthouse in the treacherous waters of samsara. This can be compared to not be
dust rising in a room until a shaft of sunlight shines on it. In the same way, then, if you feel th
too much thought, it is the first step toward enlightenment. Abandoning thought, persevering
that permits this and delighting in this, usually over a long period of time, lead to a natural di
of thought. There is, instead, stillness. As you continue in this way, the stillness becomes mo
for it becomes a stillness in which sudden enlightenment can occur.

Reciting the Name of Amitabha Buddha

As you may have realized, it is not unusual for thoughts to assail you relentlessly when you
practice. Usually it is beyond your control, and, even with the best of intentions, one might e
that there is no way to begin to practice. If you find that is more the rule than not for you, you
the Pure Land approach, which is simply to recite the name of Amitabha Buddha over and o
very simple practice and can be very effective, but it requires a deep faith and a strong vow
carry it out. However, if you sincerely recite the name of Amitabha,so that there is no other t
mind, and do this for some time, false thought will diminish.

Ch'an Master Che-Wu said that when a pure pearl is put into turbid water, the turbid water b
Similarly, when Buddha's name is put into a confused mind, that mind becomes Buddha. Ide
Amitabha Buddha should free you of defilements in this very lifetime and assure your rebirth
as a great, bright light in the Ocean of Suffering, meriting praise for the Mahayana sutras an
patriarchs and Dharma Masters of the past. Should you have any reservations about this pra
said that this simple act of reciting Amitabha is profoundly Buddhist, because it engages bod
mind in one concerted effort-the body by regulating the breath; the speech by confining it to
utterance; and the mind by a resolve which has been made and a vow which has been taken

There are variations on this theme, as it were. You can recite aloud. You can recite silently.
as you inhale. You can recite as you exhale. You can recite on both inhaling and exhaling. T
you practice varies according to your particular needs and abilities, but this is true of any pra

you might engage in. The recitation should, in any event, proceed with the tranquility that co
and breath depending on one another. As you continue in this way, the mind grows calm an
shapeless. Then, it is as though only your original intention or vow functions, the recitation c
its own without disturbance or confusion until first the stage of no-mind is reached and then
no-mind s attained.

In The Sutra of Ch'an Samadhi it says that if a Bodhisattva meditates with nothing but the Bu
obtains samadhi. This simple method of reciting the Buddha's name can rid you of discrimin
is the false thought or the thinking that the common man is plagued with, and reward you w
and because your breath is regulated, your health is improved too.

It might help you to count your recitations. Again, you can experiment to find out what works
Count with each cycle of breathing in and out, preceding or following an exhalation; or just in
part of each recitation. The count, here, can be anything that you decide upon, or you can si
count from 1 to 10, as before, repeating it over and over. Or, again, you might even silently r
recitation ten times with each breath or as many times as you can. Any of the above approa
bring about effective concentration, the object of them all being to provide you with somethin
repetitious to fully occupy your mind without disturbing it. You have to try it! You have to exp
it! That is to say, now that you know the way to prepare a delicious and nutritious meal, you
prepare it, taste it, see whether it agrees with you, improve on it, if need be, and then eat it u
health improves. By analogy you must use this procedure in your practice until the practice p

slumber.

What To Be Mindful Of

Every moment of every day presents an opportunity for meditation. However, you may feel t
or that you need a structure. In that case, you might try it upon arising in the morning and/or
retiring at night. If you can make the attempt only once a day, experiment to find out what t
for you is, not only in regard to availability but also in regard to the time when you feel most
responsive to practice. Look for quality in the short time set aside. In the beginning, especial
should be regarded as a time of rest, of relaxation or of unwinding. It is a time of not doing a
time of not being actively engaged in anything. From the start, then, find out how to let your

proceed naturally, rather than seeking to make things happen through an act of determinatio
aside ten minutes within which to practice and then extend the time a minute or two with eac
sitting, until you are sitting for thirty or forty minutes at a time; and you should find a place wh
can be assured that you can continue to do so at the same time and place each day, becaus
creatures of habit. In fact, when you wake up, and while you are still in bed, you should plac
over your solar plexus and then guide them slowly down to your lower abdomen. Do this sev
go to the bathroom to relieve yourself, brush your teeth and bathe, and then sit down to prac
routine can be used at other times during the day as well, and, when established, it become
brushing your teeth. What is most important, however, is that you make it a living experience
discovery through relaxation and passive observation.
Eating is one of our earliest sources of conditioning, and so part of your practice is to regard
medicine. This may seem to be a simple enough thing to do, but it can prove to be very tryin
simple practice is thoroughly disruptive, producing feelings of deprivation and anxiety wher
have access to their private pacifiers or conditioning. One of its purposes, however, is to rev
attachments, in order to discover the natural inclination to be a part of them, and then have t
evolve into freedom.

As to the procedure itself, do not eat directly before you sit, because it may make you sleepy
eaten too much, you may be thoroughly distracted by the discomfort of feeling full, perhaps
of finding it hard to breathe. However, not eating enough has its disadvantages, too, making
have headaches and be incapable of concentration. You must learn to listen to your needs.
what happens to you all the time, so that you can know the right food, the right amount of it t
also, discover how long to wait after having eaten before sitting.

In this way, you may find that life takes on a sense of order, that you are not so involved in e
and, as a bonus perhaps, that you are losing weight. With only the most superficial observat
discover that eating as you do ordinarily may be followed by a plethora of such symptoms as
unrest, headaches, depression, anxiety, stomachaches, muddled thinking, fatigue or itching
what the causes are, you may be able to rid yourself of the symptoms. However, that may n
easy as it may seem. There are many kinds of addiction, but it is characteristic of them all, a

reactions overall, but also helps you to become less attached to things that have been troub
become aware of how everything has happened, and, by not acting on it, come to tune in to
that chimes in to help liberate you, as it were. It cannot be said too often that you must find o
best for you. Some people require an empty stomach. Others prefer to shower and meditate
lightly, and, to complicate matters, it may not always work for them. It's all there before one t
All it takes is being aware of what's happening all the time.

Anyone who has missed a night or two of sleep and has had to work knows how miserable i
awake, let alone concentrate and, perhaps, do physical labor as well. Sleeping too much ca
sluggish, and so neither too much nor too little sleep is good for meditation. So there it is ag
to you, the practitioner, to find out what is best. Then, once you have done that, you can wo
schedule. For example, you might sit from nine to ten in the evening, retiring directly afterwa
six in the morning, you can go about your morning ablutions and sit again before going out f
you awaken at night and find that you are not sleepy or that you have trouble falling asleep a
use that time as an opportunity to meditate. Sleep usually ensues as relaxation sets in. Shou
however, then simply continue to sit. With practice, your need for sleep diminishes, and you
can manage quite well on just four or five hours, or even less. In fact, there are meditators o
longer have any need to sleep but meditate instead. This ability is not something that can be
learned but develops naturally.

Perseverance

Beginners often find that sitting practice is very uncomfortable. In fact, some may even conti
way long past the time that they qualify as beginners. What keeps them coming back is per
progress you must persevere, and you must sit every day at the same time and in the same
gently erect, simply aware of whatever is happening or lightly engaged in concentration and
of coercion.

Results

Looking for results is counterproductive. Ideally, all thought falls away and is replaced by a r
which, incidentally, proves to be healthy because it is free of desire and, thus, relatively free
Having no aim is refreshing but is seldom understood, as such, and difficult for most to come
to do, to excel and to succeed are at the heart of one's very being. To relinquish such inclina
seem to be outside the scope of what one can do, because it would take away the illusion o
why a correct understanding of the Dharma is so important.

No Concern

Drop all cares! Put away all things during your practice and simply regulate your breath and
deluded thoughts are seen to come and go. Not caring about them, your mind grows calm. C
sitting, and you won't see outside things. Sounds may still be evident, and you may feel that
disturbing and that your practice is difficult; but in that very moment, if you are aware of wha
thinking as just thinking or of what you are hearing as just hearing, your problems, as such,

Habits

It is not really enough just to do sitting practice; and it is certainly not enough if you are doing
twice a day. You must be attentive to your conduct and constantly be on guard against fallin
habitual behavior. This means that you must recognize and then seek to control your greed,
that you should do good, take refuge in the Three Treasures (Buddha, Dharma and Sangha)
precepts (not to kill, steal, commit adultery, lie or ingest intoxicating substances), and that yo
read, study and inquire to make clear what you understand of the Dharma to be able to set u
Right Understanding and Right View. In this way, you can be more free of desire, be more a
and, in time, have successful meditation take place.

Experiences Likely to Arise

Do not be upset if, while practicing, you suddenly grow very hot, perspire profusely, shake, p
violently, hear what seems like all-pervading sound, find yourself assuming various positions
intending to and, possibly, see apparitions. Do not attempt to suppress any of these manifes
most practitioners never have any such experiences, but, on the contrary, practice successf
benefit of improved health as well. One might wax mysterious and say that it is due to karma
really no more than saying that it is what it is. It should suffice to say that meditation can som
attended by mental, emotional and physical effects that are transient, as long as there is no
them. Should they upset you, just understand that everything is void and that even what see
constantly. Keep in mind that nothing is real because nothing has any inherent nature; and s
to crave or to reject. It is with such a view that you may be free of grasping, and it is then tha
concentration should easily ensue. Without such a view, however, you are in danger of bein
whatever may seem important to you.

Dharma Master Tao-Yuan, in describing his style of practice, said that one who has prajna(w
arouse great compassion and make a great vow to attain samadhi, to convert sentient being
seek salvation for himself. He must also abandon all conditions, or, in other words, simply st
anything at all, neither differentiating body and mind nor motion and stillness. He should eat
enough to sustain health, and he should set aside a time and place to meditate each day, si
full- or half-lotus position. Should he choose to sit in the full-lotus, he should place his left foo
of his right thigh and his right foot on top of his left thigh. Respectively, he should then place
his right hand in the palm of his left and then put the back of his left hand on his left foot in th
half-lotus, or on his two upturned feet in the full-lotus, touching his thumbs together ever so l

Having established a stable and comfortable base, he should then lean forward and backwa

that Ch'an Ting (dhyana) gives rise to clear wisdom that is free of all obstruction, that is beyo
everything, and that comes about more readily in the calm of meditation.

A question in The Great Sastra asks why the Buddha advises that one use only the lotus (or
position. His reply was that, of all the methods that have been tried in meditation, the lotus p
found to be the most secure and stable, enabling the practitioner to sit for a long time withou
so it is ideal for practicing Ch'an. It has a way of putting one's mind in order, too, just as it ar
physically. Of the four mind avenues of practice-sitting, walking, standing and lying down-the
is supreme, contributing to the most proper demeanor for practice.

There are heterodox practitioners who raise their feet, stand up often or bare their feet. Such
fellows exhibit unrest and cannot quiet their minds. This, then, is another reason why one sh
lotus position. Furthermore, sitting in this manner, it is easier for one to develop correct thou
correct concentration which can then lead to oneness of mind. Elsewhere in The Great Sast
advised that one who would learn to meditate should concentrate on one point, which shoul

the eyebrows or in the middle of the forehead.

The great T'ien-T'ai master, Chih-I, who taught Chih-Kuan and methods of practice in Ch'an detail how one should regulate one's diet to be fit to enter the Tao. Simply put, he said that i much at one time, your stomach will be so full that you will be unable to breath properly. Thi cause your psychic centers to be blocked and your mind to be obstructed, making it extreme impossible, for you to practice. If, on the other hand, you have not eaten enough, this can ca be unsteady for want of energy. Naturally, these extreme conditions are to be avoided, and two reasons why one should practice the Middle Way.

Regarding your diet, avoid food that only you can know is unsuitable for your practice, can k in disharmony and can lead to illness. This is a way of pointing out the practicality of being e for it is through such observation that you can ultimately learn what is appropriate for you. It unheard of that certain foods cannot only make one feel out of sorts or ill, but also may caus sudden mood swings or even hallucinations. Hence, the sutra says that if you are physically can prosper, and that if food and drink are properly regulated, happiness can be enjoyed in still mind can make a great show of zeal.

Regulating Sleep

It is said that overindulgence in sleep results from ignorance, clouds the mind, and should b who sleeps too much will soon not only cast aside his practice of Dharma but will also quickl ability to practice, as his mind becomes confused and all his good roots come to no avail. Th should awaken to the impermanence of life and regulate one's sleep in order to keep one's one's mind clear for the purpose of abiding in the state that leads to the manifestation of imp stillness. Hence, it is further said that self-cultivation should always go on and that excessive not be allowed to cause one's time to pass aimlessly. One should think of the destructive fire that scorches the whole world and strive to be liberated from it as soon as possible, instead oneself in excessive sleep.

Regulating Body, Breath and Mind

Body, breath and mind are all interdependent and are sometimes conceived of as being asp thing. In Buddhism, there are practices that have been devised to work with these aspects. methods that are designed to take you through preliminary, intermediate, and final practices and practices are employed to prepare you to enter into and to come out of, some say, the h all-meditation.

Your everyday activity must have a gentle quality. If there is any roughness to it, your breath as well; and when your breath is rough, your mind is unsettled, so that when you attempt to perplexed and uneasy. To remedy this, simply visualize yourself as being already physically sitting at ease before you actually sit down to practice. When the beneficial effects of this sir have manifested and you feel warm and relaxed and gently present, you can arrange yourse sitting position.

What follows are directions for sitting in the half-lotus position, as described by yet another t Arrange your cushions so that you can sit comfortably for a long time. Then, position yourse half-lotus position. To do this, sit upright with your knees out to either side and your legs cro ankles. Then place your left lower limb on top of your right thigh and slide your left lower leg your lower belly, so that the sole of your left foot is turned up and the toes of your left foot ar to your right thigh. The toes of your right foot are also arranged so that they are parallel to y thigh.

Should you want to sit in the full-lotus position, observe the above procedure; and then plac lower leg on your left, turning the sole of your right foot up and drawing it in close to your low Once settled, loosen your belt just enough to keep it from slipping and then loosen anything be even slightly binding, like a wristwatch or a snug collar. When you have done that, lay the left hand in the upturned palm of your right, and rest the back of your right hand on the uptur your feet. Then check to see if you are leaning, slumping or straining, and, having made wha you need, shake your limbs seven or eight times to relax them. Then check again to see how making sure that you are not slumped down or sitting rigidly upright but are easily erect. You not jut forward or lean to one side or the other, and your chin should not be vigorously pulled feel that you are just sitting naturally. Then, slowly and continuously exhale through your mo imagining that all the waste and impurities that might be in your psychic centers are being ex with your breath. Close your mouth, so that your upper lip and teeth meet your lower ones a touches your palate, and then close your eyes and inhale clean air through your nostrils. No you are a mountain, settled and immobile. Sitting in this way, you can avoid both strain and

Regulating The Breath

For meditation successfully to take place, the breath must first be regulated. There are, tradi kinds of breath: audible, gasping, coarse and restful. The first three are considered to be sor disruptive. If you can hear your breath, it is said to be audible. If it is not audible, and is also obstructed or not free, it is called gasping breath. If the breath is neither audible nor fine, it is be coarse. When it is neither audible nor gasping nor coarse, but continuous, being barely p fine that it is almost imperceptible and also accompanied by comfort and ease, it is called re

audible breath scatters your composure; a gasping breath ties you up; a coarse breath tires
restful breath indicates a quiet mind. If any of the first three ways of breathing is present, it m
your breath is not yet regulated.

Regulating the Breath: a Summary

There are three notable phases that take place during the course of this practice:

* Concentrating properly, you relax.
* Your mind grows calm as you relax more and more.
* You have the experience of breathing through all your pores.

Regulating The Mind

Entering Meditation

The purpose or goal, is to reduce confusion and thinking, to keep your attention from wande
stabilize the mind when it starts sinking, floating, straining or becoming too diffuse.

Sinking mind is dull, confused and untraceable. Even dozing may occur. Therefore, to reme
advised to fix your attention on the tip of your nose.

Floating mind drifts; you feel uneasy and are concerned about externals. Therefore, you are
your attention on your navel because this has been found to keep thoughts from arising. Thi
mind is said to be stabilized and is calmed easily. It then becomes a regulated mind.

Sustained Meditation

Meditation ultimately is simply awareness without intention. However, you are encouraged t
aware and to know whether your body, breath and mind are properly regulated. If, after havi
body and having sat for awhile, you notice that your sitting has become strained or loose, th
inclined to one side, drooping, holding your shoulders up or pulling them backward or forwar
somehow not just right, you should make the proper adjustments in order to maintain a regu
be possible, however, that even though your body is regulated, your breath is not, even afte
dealt with various unregulated aspects of the breath, which may be audible, gasping or coar
happen that, even though the body and breath are regulated, the mind is either floating, sink
strained or unsettled, in which case the methods mentioned earlier should then be used to r
Although these methods are to be used expediently, rather than in succession, they may, ne

very willful. Actually, it is a little like learning to ride a bicycle; once learned, it takes care of it

Coming Out of Meditation

Before your meditation session is over, you should, in a manner of speaking, put it aside and your mouth while visualizing the air leaving your psychic centers. Then gently rotate your sh hands, head and neck; next wiggle your toes to relax them. Having done this, rub your body and then rub your palms together and put them over your eyes, cupping them for a while. Fi that you have cooled down sufficiently, you can leave your seat. To come out of meditation a though everything may have been stabilized while you were sitting, can cause headaches an illness.

The Practice of Chih-Kuan in Relation to Coarse and Distracted Mind

When a beginner sits down to practice, his or her mind is usually coarse and unsettled. Prac conducive to mind control, but, failing that, one can switch to Kuan. Let us see what it all me

The first approach, called Chih, has three components, as follows:

1. According to the sutra, a fixed mind that cannot stray is like a bound monkey. As applied t means fixing your attention on the tip of your nose, on your navel, or an inch and a half belo
2. The sutra further says that the five sense organs are controlled by the mind. To stop a wa restrain it through observation as it moves.
3. Understanding is of primary importance. Referring to the sutra again, we find that the cau phenomena are ownerless and empty. Whoever calms his/her mind, has the foundation for n Stopping all arising causes and ensures the attainment of Absolute Reality by means of the all things (dharmas) arise from the mind, that their existence is due to circumstantial causes are devoid of separate self. If this is understood, the mind will not grasp at anything, and its condition will simply come to a complete stop. The term Chih means just that -- stopping.

The second approach, called Kuan, has two components, as follows:

1. If you find yourself caught in sexual desire, for example, you should cultivate the opposite sex as dirty and ugly. When you are consumed with anger, you have to find a way to expres The opposite of an attachment to the ego's concerns would be to call to mind how everythin When you are deluged with thoughts, you count your breaths. The effect of this strategy is, u call a halt to discrimination.

2. This consists of looking into the nature of things and seeing that they have no inherent ex
their apparent existence is dependent upon apparent causes, which, in turn, are dependent
experiences and what is presumed to be present circumstances. In other words, causes, als
nature; and so they are actually identical with the undifferentiated reality from which they se
Since the objects, thus contemplated, are unreal, it then follows that the mind which contem
cease to arise.

The Chih-Kuan Dharma Gate

To recapitulate, remember that in order to prepare for meditation you should sit properly and
breath to stabilize and control your mind. This requires a great deal of patience for most prac
because the mind is, ordinarily, quite unruly. Not succeeding at it should not keep you from
Chih-Kuan,however; nor does it mean that you should quit your practice of regulating your b
mind. As it is, you soon discover that the mind's activity is like a monkey, never stopping for
The advice that is traditionally given is to limit this monkey's movement. The Chih,in Chih-Ku
stopping and refers to stopping the false or misleading activity of the mind. To do this-i.e., to
monkey mind by practicing Chih--the first step is to fix the mind on a single object to keep it
from one object to another. Having accomplished this, you look within to contemplate your th
discover anew that they arise in great number and often without any relatedness, appearing
randomly. You also realize that future thoughts have not yet come. When you ask yourself w
thoughts is your mind, you realize that your false mind rises and falls and is, thus, also devo
If you continue in this way, you become familiar with this unreality, and your false mind come
itself; and with the false mind at an end, reality is evident.

When you first sit down to practice, your mind is often unsettled. This is appropriately called
,and to set it at rest, stopping, or Chih, is used. If it is stopped again and again, the thinking
gradually comes to an end. While meditating, you may find yourself getting drowsy. This is
mind and the way to awaken it is by contemplation, or Kuan, which involves closing your eye
inward, as it were, to the source of your thoughts. There are three kinds of Kuan, or contemp
contemplation of the void; contemplation of the unreal; and contemplation of the mean.

Contemplation of the Void

You look into all things within the universe, from the largest-including the earth, mountains a
the smallest-including your body and mind. Doing so, you perceive that everything changes
is non-existent and void; and when your mind looks into this voidness, that is called contemp
void.

Contemplation of the Unreal

When you are familiar with this contemplation of the void, you look into your mind or the plac from which thoughts arise, and you find that each thought has its object. You then realize tha phenomenon owes its existence to a union of an inner cause and an outer concurring circun a grain of rice sprouts because of the union of an inner direct cause, which is the seed, with concurring condition, in the form of the water and mud that moisten and nourish it. If the grai not sown and is left in the warehouse, it will never sprout because there is only an inner, dire without an outer condition. Also, if there are only water and mud, without the seed being sow cannot produce the sprout because there has been no union with an original cause-namely, phenomenon in the world is created by the union of direct and circumstantial causes and va they are separated. This includes thoughts that arise and disappear in the mind and that car Such contemplation is called looking into the unreal.

Contemplation of the Mean

There are two contrasting attitudes connected with contemplation of the void, on the one ha into the unreal, on the other. When you reach this stage, your achievement is still incomplete succeeded with contemplation of the void, do not cling to the void; and when you have achie of the unreal, do not grasp at the unreal. When you succeed in keeping from the extremes o unreal, your non-relying and non-clinging mind will be extraordinarily clear, and this stage is contemplation of the mean.

At first glance, the Chih-Kuan Dharma Gate seems to imply diverse or successive stages. In of either Chih or Kuan depends solely on the inclinations of the mind during meditation. As a the purpose of Chih is to return all thoughts to one, the one mind,and that of Kuan is to attai insight into the truth, which is to be free of illusion. When stopping, or Chih,is practiced, it sh stray from stopping. Do not cling to the printed word, but practice intelligently, according to t circumstances.

The breath is the source of life. When the breath stops, the body is just an inanimate corpse nervous system no longer functioning, the mind vanishes and life comes to an end. That is w be preserved by the breath, which links the body with the mind. Thus, we see that a human body, breath and mind and that the breath plays the important role of uniting the other two c

The T'ien T'ai meditation manual, entitled The Six Profound Dharma Gates (T'ung Meng Chi breathing as a comprehensive practice that may be preceded by training in the Chih-Kuan m

used independently of it. The consecutive stages are as follows:

1. Counting the breath
2. Following the breath
3. Stopping (Chih)
4. Contemplation (Kuan)
5. Returning
6. Purification

The Method of Counting the Breath

The breath-counting method offers two possibilities, as follows: After you have regulated you
it is neither too tight nor too loose, count slowly from one to ten on either your inhalation or e
Do not count on both. For example, breathing in, count one; then exhale and upon inhaling a
and so on. Your mind soon becomes fixed on the activity and does not wander as readily. If
before you have reached the count of ten, return gently and without further thought to one, a
counting as described above. This is the method of meditation known as Breath-Counting.
Realization Attained Through Breath-Counting

As you grow accustomed to the method just described, your breath becomes finer and finer,
non-existent. This stage is called Realization By Breath-Counting.

The Method of Following the Breath

This method is both easy and simple: Just focus on your breath and follow it mindfully, hold
until it is no longer an issue. Then mind and breath become one.

Realization Attained Through Following the Breath

As it follows the breath, your mind becomes increasingly subtle. You may notice, at first, the
breath; but as it gets more refined it becomes almost undetectable, and at that point it feels
occurring through the pores of your skin. The effect on your mind is stilling or calming. At thi
practice, you may wish to cultivate your breath further. Your next step will be the practice of
consisting of two phases: Chih and Kuan.

The Practice of Stopping, or Chih

Focus lightly on the tip of your nose; it leads to stopping. In the course of this simple practice

suddenly feel as if your body and mind have vanished; you will, thereby, enter a state of still
dhyana.

Realization Attained Through the Practice of Chih

At this stage, clarity develops through awareness. You feel no longer attached to anything, a
longer a sense of subject and object while sitting; then you proceed to the stage called Kuan

The Practice of Contemplation, or Kuan

This practice consists of a gentle, passive observation of your refined breathing, regarding it
in a void that has no reality of its own.

Realization Attained Through the Practice of Kuan

This is a further refinement of practice in which you come to feel as though you are breathin
pores of your skin. To a bystander, you may appear as if you are not breathing. When you re
Chih and Kuan become indistinguishable. As a point of interest, the Samatha Vipasyana for
from Chih-Kuan in intent, in that the former develops mindfulness, while the latter develops a
extended session of contemplation should be followed by
Returning.

The Method of Returning

Contemplating your breath, you may realize that there is an apparently subjective mind that
apparently objective breath and that these very clearly constitute the two poles, the essence
However, they are to be returned, as it were, to the one, fundamental Mind.

Realization Attained Through the Method of Returning

This method develops the awareness of the knower that contemplates the breath as rising a
mind. This rising and falling mind is experienced to be like the waves that rise and fall in the
leads to a realization of the illusory nature of it all. The waves are not the water, the fundame
which can be seen only after the waves have subsided. Similarly, the mind that rises and fal
in the water, is not the True Mind. Now look into this True Mind, which is uncreated. Becaus
it is beyond is and is not; and it is, therefore, void. Because it is void, it follows that there is n
subjective mind that contemplates. Because there is no contemplating mind, it follows that th
contemplated; and because knowledge and its object vanish, this is called The-Realization-o
Following that realization, the idea of returning remains; to relinquish it, one should meditate

Realization of the State of Purity

The practice of purification consists of contemplation on discriminating views. When the min calm water and there is an absence of false thinking, the Real Mind, which does not exist ap thinking, manifests. This water-without-waves sort of Mind is called The Realization of Purity

These Six Profound Dharma Gates may be seen as consisting of a preliminary set of metho and following the breath, the two main practices of Chih and Kuan,and the concluding practi and purifying. More specifically, stopping (Chih) is the chief practice, while contemplation (K support, until perception is realized, which means that one is no longer involved in making d having attachments. This reference to perception refers to the five skandhas, wherein it is se distinctions are made at the level of conception. Thus, no longer being at that level is to be a subtle level of perceptions(again relating to the five skandhas).

To realize Great Dhyana and Great Prajna, the mind must be at ease. The-Six-Profound-Dh contains methods that are designed to regulate the mind, enabling it to relax. This is paramo do not know how to relax, you cannot even begin to practice. Having learned to relax, then, breath regulated, meditation can take place. It is then that you can practice The Six Profoun counting, following, stopping, contemplating, returning and purifying, going through all of the again, slowly and patiently, putting your mind ever more at ease as you let go more and mor strict order of practice at this time is counterproductive. If you find that counting the breath g you, count your breath. If the purifying method seems called for and works well for you, do th only a few days, you may be able to understand your mind easily as never before.

Meditation and Ch'an Ting

Suffice it to say that there are many approaches to meditation in Buddhadharma that are to headings of Ch'an and Ch'an Ting. Ch'an Ting alone is an umbrella name for many methods the Four Infinities, the Four-Void Worldly Ch'an, the Nine Observations, the Samadhi of Nine (supramundane), the Ch'an of Self-Nature and the Ch'an Ting. These approaches can lead where real wisdom is to be found; and with real wisdom, there can be self-enlightenment, en others and the Ultimate Perfect Enlightenment.

It has been suggested that to sit alone in a forest or on some remote mountainside to medita abnegate the Bodhisattva vow of saving all sentient beings. In answer to that, consider that Bodhisattva who is far away from all sentient beings still retains them in his mind. Therefore way, when you meditate in the quiet place of Ch'an Ting and have acquired real Wisdom, th

help sentient beings. If you are still curious as to why you must practice in solitude, consider
It is somewhat like trying to light a lamp in a strong wind, as opposed to taking it to a room w
is still. Just as it is so very difficult, if not impossible, to light a lamp in a storm, it is equally ha
to find wisdom in a disordered mind. Thus, even Bodhisattvas live apart from sentient beings
places, so that they can practice Ch'an Ting and develop and purify their wisdom.

You have to concentrate or focus your attention on whatever you do in the everyday world, i
properly. The same applies to the quiet inner world, as well, although not in quite the same w
another analogy, let us say that you have a lamp that is in good working order and that all th
conditions contribute to its producing a good, bright light. It is only then that you will have a g
light. However, the practice of Buddhadharma assuredly is far more subtle than the act of lig
mind of confusion is much lighter than even the lightest feather and moves so swiftly that it i
anything can be done about it. It cannot be controlled, because any such attempt is, in itself
confusion. As quickly as lightning, the objects of the mind appear and disappear, and this fre
does not stop. Indeed, it cannot stop! The only way out of this tangle is made possible throu

In The Commentary on the Dhyana Paramita, it is written that a Bodhisattva must abandon l
worldly possessions, be ready to give up his very life, and then stay in a quiet place to prepa
dhyana by remaining still and calm in body and mind. When he is free of thought, there is no
arise. In preparing for dhyana, one must endure whatever happens, never tiring, always pers
confronted with evil (an obstacle to samadhi), he must exercise great patience in not respon
defilement of anger. This is accomplished by not discriminating and by neither grasping at n
anything. In his quest for dhyana, he concentrates on the one Mind (the one mind being no-
him from his course. He sits, never lying down, sits even though tired, never resting; and, the
gaining nothing by his apparent efforts, he, thereby shows, indeed, his great progress. A Bo
practices and completes all of the Six Paramitas, concentrates on the one Mind, which is no
finally understand all the aspects of birth and death in the world through Prajna.

Counting the Breath

All of the Six Wonderful and Profound Dharma Gates can produce many kinds of dhyana. Th
attained by the practice of counting the breath, because, in this way, you will arrive at the Fo
Form, the Four Immeasurable Minds and the Four Formless Dhyanas. When you have attai
Neither Thinking Nor Not Thinking is Not Nirvana, you have only attained The Way of The T
because this worldly Ch'an Ting is not yet real, still having some defilement. Using The Won
of counting the breath and neither discriminating nor grasping, you can attain all three Vehic
of Hinayana.

Following The Breath

By this second practice, you can produce the Sixteen Special Dharmas:

1. When inhaling, knowing that you are inhaling;
2. When exhaling, knowing that you are exhaling;
3. Knowing when you are breathing a long or a short breath;
4. Knowing the whole body as the breath;
5. Knowing the movement of the body;
6. Knowing the delight of the mind;
7. Knowing the happiness of the mind;
8. Knowing mind activity;
9. Knowing comfort of the mind;
10. Knowing concentration of the mind;
11. Knowing freedom of mind;
12. Knowing impermanence;
13. Knowing all things (dharmas) as dispersed;
14. Knowing desirelessness;
15. Knowing nothingness or the property of vanishing;
16. Knowing what it is to abandon and give up everything.

Stopping

If you practice stopping, you can obtain five kinds of dhyana, as follows:

1. Earth-Wheel Samadhi (which is not yet to have arrived at the tenth stage);
2. Water-Wheel Samadhi (which enables you to have good conditions for all kinds of dhyana
3. Space-Wheel Samadhi (which consists of five expedient ways of dhyana practice, whereb understand space as being without any nature);
4. The Wheel-of-Golden-Sand Samadhi (which frees you from misleading views, so that you right wisdom);
5. The Wheel-of-Diamond Samadhi (which is also known as The Completely-Without-Obsta lets you sever your bondage to the three realms of desire, form and formlessness forever).

Furthermore, by stopping, you can attain Birthless Wisdom, whereby you can gain entrance

Contemplation

Through contemplation, you can take part in the Nine Thinkings, the Eight Lines of Thought,

Eight Forms, the Eight Stages of Mental Concentration, the Ten Universals, the Samadhi of
the Samadhi of the Powerful Lion's Roar, the Transcendental Samadhi, the Practice of Ch'a
Transmutations of Mind, the Triple Bright Samadhi, the Six Transcendental Powers, and the
all of which enable you to acquire the Samadhi of No-Sensation and No-Thought.

Returning

The meditator, through Prajna, is freed of defilements by returning to the void of the Original
is no source and in which there is nothing but void-without form and with non-action-indicatin
self-nature. Without any self-nature, there is no longer a subject or an object, and distinction
longer made because there is no one to make them and nothing to make them about.

In this way, the thirty-seven conditions leading to Bodhi are satisfied, as well as those contai
Four Noble Truths, the Twelve Nidanas and in the Right Contemplation of the Middle Way, w
attained.

Purification

If a meditator knows, through Prajna, that all Dharmas are originally pure, he can acquire the
Self-Nature because he has attained what is known as Hinayana Nirvana, or Two- Vehicles
Bodhisattva can enter the stage of the Iron-Wheel King, has completed the Ten Grades of B
continues to practice, he can produce the following nine kinds of Great Dhyana:

1. Self-Nature Dhyana
2. All Kinds of Dhyana
3. Difficult Dhyana
4. All-Kinds-of-Doors Dhyana
5. Good-Person Dhyana
6. All-Active Dhyana
7. Rid-of-Defilement Dhyana
8. The-Joy-of-This-Life-and-The-Next-Life Dhyana
9. Pure-and-Clean Dhyana (Since a Bodhisattva depends on this kind of Dhyana, he can
Fruit-of-Great-Bodhi Nirvana)

In Sudden Enlightenment, the nature of mind is realized as being originally pure. Dharmas a
at nor rejected; there is neither being nor non-being; there is neither birth nor death; there is
nor that; and there is neither void nor existence, Then, there is the knowing afforded by the a
non-duality, where nothing is grasped, there being neither someone to grasp nor anything to

Original Substance is known, there is freedom from attachment to the objects of the sense c
is no longer any illusion of the existence of a permanent self, there are no longer any encum
no grasping at the void and no holding to stillness; there is simply whatever is, without defini
choosing. Short of this, there might still be a somewhat encumbered level of awareness wh
recognition of still being in the midst of causes and conditions, without attachment; but it is to
understood that even this recognition is a kind of grasping.

The Sastra of Entering The Tao of Sudden Enlightenment, by Ch'an Master Hui Hai of the T
what method should be used to understand Original Dharma. The reply is that one need onl
Referring to The Sutra of the Ch'an Door, one reads that if you seek the wisdom of the Budd
Ch'an-Ting; for without it, you will have a great abundance of false thoughts and will be in da
destroying your good roots. To understand this more clearly, Ch'an-Ting is defined as follow
no false thoughts, that is Ch'an; and to see one's Original Nature is Ting. Original Nature is a
Non-Birth, or Unborn Mind, where there is no longer any oneto be moved by the eight winds
defamation, fame, praise, ridicule, sorrow and joy. Thus, even if one is worldly but attains Ti
approaches being a Buddha.

Elsewhere it is written that if you are free of attachment and if you no longer think of things (
during meditation nor discriminate between good and evil, then past things are past. If you d
them, the mind of the past vanishes. This is called no past. Furthermore, the future has not
when it is not necessary to wish to obtain it, the mind of the future is no more. This is called
Finally, the present is already present, and there is no need to grasp at anything. When you
thoughts, there is no longer any grasping. Without grasping, the mind of the present vanishe
no present. Then your mind dwells on nothing, and this is Original Mind and Original Nature
dwells on nothing is the Mind of the Buddha, the Mind of liberation and the Mind of no-birth.
Kuei-Feng said that True Nature is neither pure nor impure and that there is no difference be
and the worldly.

Varieties of Ch'an

Master Kuei-Feng, also, said that when shallow and deep stages of Ch'an are referred to an
chooses to practice the deep ones because he looks down on the shallow stages and then f
what he engages in is called heterodox Ch'an. Holding to cause and effect and practicing wi
are known as Worldly-People Ch'an. However, when only the illusion of the personal self ha
through Enlightenment but not that of the self-nature of dharmas (things), this is called Hinay
the other hand, when the ego and all dharmas are enlightened, this is called Mahayana Ch'a
self-nature of one's self and the self-nature of everything else, or all dharmas, are known to
one's own mind is suddenly enlightened, it is in its original purity, free of defilement and not

stream.
This mind is the Buddha, and practicing in this manner is called Supreme Ch'an.

The Sixth Patriarch, Hui-Neng, described sitting Ch'an by stating that being without obstacle
and being beyond all ideas of good and evil, without a single thought arising, is called sitting
seeing into the stillness of one's Original Nature is called Ch'an. Regarding Ch'an-Ting, he s
absence of external form (i.e., no object) is Ch'an, and to be free of the confusion of thought
subject) is Ting. Furthermore, he said that if one grasps the forms (the apparent objects out
evidence of a confused mind and adds to the confusion of what the mind conceives of as be
no longer attached to objects and to there being an outside, then there is no longer any such
mind. Original Nature is pure and still, but is disturbed by thinking and, it follows, by objects.
are no things, no outside and no confusion in the mind, that is real Ting. The Sutra of Bodhis
is a bit more succinct. There, it simply says that originally your own nature is clean and pure

Observing The Mind

We are ordinarily concerned with things that are conceived of as being outside of us, or, ess
objects of our thoughts; and we never think of observing the place within, as it were, whence
arise. By looking inward at the source of thought, the workings of your mind are still evident
longer so commanding, and a more and more passive sort of observation develops that redu
can help to reveal your own True Nature. In all Mahayana sutras, it can be seen that Prajna
accompanied by Universal Illumination. In one such sutra entitled Observing the Ground of t
stated that one who observes the mind can be liberated but that one who does not is always
death. Along somewhat similar lines, one finds in The Sutra of Nirvana that Supreme Dhyan
observing the nature of the mind. Chih-Kuan, in Buddhadharma, is translated as either Dhy
(Ting-Hui)or Stillness and Illumination. In The Maha-Chih-Kuan the stillness of Dharma Natu
and stillness with illumination is called Kuan; and it concludes, therefore, that Chih-Kuan is t
method for purifying the mind. There are, however, many ways to practice Chih-Kuan. Just t
there are Deep and Shallow, Sudden and Gradual, Cultivation and Principles and Complete
complicate matters even further, there are three different categories of Chih-Kuan in the T'ie
tradition: gradual, unfixed and perfect.

Gradual Chih-Kuan

In The Commentary on the Dhyana Paramita of Gradual Chih-Kuan, practice is described a
first and deep later, which implies a gradual development. Understanding, however, is said t

Unfixed Chih-Kuan

Unfixed Chih-Kuan, also known as The Six Wonderful Dharma Gates ,is sometimes describ
method leading to sudden understanding. Here, practice is gradual at first and then sudden.

Perfect Chih-Kuan

In The Maha-Chih-Kuan, it says that in Perfect and Sudden Chih-Kuan, all conditions and re
three contemplations in one mind, and that there is only sudden understanding and action, w
as to when it began or as to how it progressed thereafter.

The practices of The Maha-Chih-Kuan method are thorough, assuredly, but are too subtle to
aid of an accomplished teacher. However, until such time as the reader may discover such a
practice the following effective method of observing the mind. Sit comfortably in the lotus po
other position that is suitable for you. Lay down all things, and even give up the thought of la
everything down. In this way, thinking of neither good nor evil, close your eyes gently and lig
where your thoughts seem to issue from. This permits you passively to be aware of your fals
suddenly come and just as suddenly go, neither grasping at them nor driving them away; thu
come to understand profoundly that false thought has no self-nature (is empty) and that it
void. When false thought is then illuminated by your mind, a stillness becomes evident, whic
suchness. Then if another thought suddenly arises, using the same approach, just observe l
the thought seems to come from. Do this at least once a day for at least half an hour.

If you continue to reinforce your knowledge of Buddhadharma, as well, through reading and
are inclined to hear what you might have to say about Buddhism or practice, then, over a pe
meditation can help reduce false thought (known as using wisdom to support Ting)and incre
illumination (known as using Ting to beget wisdom).If you continue in this way, you will, even
to sit without a single thought arising. When there is awareness, with no dwelling and no gra
source of mind is void and still. Then, Wisdom (Prajna) and Original Nature respond as one
moment. In The Hand-Flower Sutra, it states that when you observe the mind, you see the b
thought after thought as having the quality of being magical and unreal. The subject of Wisd
which is like saying that Prajna is Wisdom, while its object is ignorance (confusion or false th
perfume of Prajna is then said to permeate ignorance more and more until there is just Prajn
Original Nature. Whether walking, sitting or lying down, one should always be aware of the S
(stillness) of Original Nature.

The function of illumination is Enlightenment, which is sometimes referred to as right though
It is like a pearl that emits light and, thereby, also illuminates the substance of the pearl. If a
thought arises in an illuminated mind, it vanishes as quickly as a snowflake in a blazing furna

strong habits no longer present any obstacles. With such practice, your Original Nature appe
stronger. There should be no needor intention to have illumination, because need and intent
way of its ever coming about. When there is real illumination, there is no longer any involver
Then, mind is no-mind. Then, there is simply Suchness. Without thought, there are no condi
Nature, known directly, is reality. However, even if you can concentrate on one thought and
for just a moment or two, you still have benefited by knowing Prajna, and have, thereby, plar
Bodhi. In The Lankavatara Sutra, it says that you should rely fully on the teachings and then
place where, practicing free of all doubt, there can be Enlightenment. In The Sutra of Compl
it says that all Tathagatas arise from the ground cause of correct practice; and so, again and
understanding and right practice are advised.
Conclusion

We have seen that there are many ways to bring about meditation in the Buddhist tradition a
bestow upon a practitioner all-around emotional, mental and physical health, enabling him to
Enlightenment and, thereby, benefiting both himself and others. There is the proviso, howev
though sitting practice can promote good health, health is beneficial only temporarily; becau
long you live, you must finally die. In The Sutra of Complete Enlightenment, it says that since
beginning, all sentient beings have been mired in ignorance. In their confusion they have m
elements (earth, water, fire, air) for their bodies and the shadows of the data of their six cond
senses for their minds. The aim, then, is to be free of those delusions, going from confusion
Enlightenment. To keep that aim alive, it is important to use sutras and anything else that he
Buddhadharma and to continue to practice discipline and concentration in order to develop e
that Prajna can arise.

* Buddhism Glossary
A
adj.: healthy; n.: antidote, panacea, universal remedy.

Agamas
Generic term applied to a collection of traditional doctrines and precepts; also means the ho
collecting-place of the law or truth; the peerless law; the ultimate absolute truth. The Four A
follows: (1) Dirghagama, "law treatises on cosmogony; (2) Madhyamagama, "middle" treatis
Samyuktagama, "miscellaneous" treatises on abstract contemplation; (4) Edottaragama, "nu
subjects treated numerically.The sutras of Theravada are referred to at times as the Agamas
Agara
House, dwelling, receptacle; also, used in the sense of a Bodily organ, e.g., the ear for soun
Agaru/Aguru

Sandalwood incense.

Alaya Consciousness

The fundamental consciousness of all sentient beings. As defined by the Yogacara School, "storehouse", implying that this consciousness contains and preserves all past memories an energy within its fold; it is the reservoir of all ideas, memories and desires and is also the fur cause of both Samsara and Nirvana.

Almsgiving

see charity.

Amitabha (Amida, Amita, Amitayus)

Amitabha is the most commonly used name for the Buddha of Infinite Light and Infinite Life. Buddha venerated by all Mahayana schools (T'ien T'ai, Esoteric, Zen ...) and, particularly, F Presides over the Western Pure Land (Land of Ultimate Bliss), where anyone can be reborn sincere recitation of His name, particularly at the time of death.

Amitabha Buddha at the highest or noumenon level represents the True Mind, the Self-Natu Buddhas and sentient beings -- all-encompassing and all-inclusive. This deeper understa the rationale for the harmonization of Zen and Pure Land, two of the most popular schools o Buddhism. See also "Buddha Recitation," "Mind," "Pure Land."

Amitabha Sutra

See "Three Pure land Sutras."

Anasrava

(Skt.) Opposite of asrava.

Anuttara-Samayak-Sambodhi

The incomparably, completely and fully awakened mind; it is the attribute of buddhas.

Apaya-bhumi

States of woe: the three realms of existence characterized by extreme discomfort and delus hell-states, animal-birth and the hungry ghosts, or pretas.

Arhat

Arhatship is the highest rank attained by Sravakas. An Arhat is a Buddhist saint who has att from the cycle of Birth and Death, generally through living a monastic life in accordance with teachings. This is the goal of Theravadin practice, as contrasted with Bodhisattvahood in Ma (A Dictionary of Buddhism.) The stage is preceded by three others: 1. Stream Winner, 2. Or Non-Returner. See also "Sravakas."

Arthakrtya

One of the Four All-Embracing Virtues: performance of conduct profitable to others in order toward the truth.

Arya

Any individual ennobled by his/her own continuing effort on the path to enlightenment.

Asamkhiya (kalpa)

Term related to the Buddhist metaphysics of time. Each of the periodic manifestations and d
universes which go on eternally has four parts, called asamkhiya kalpas.

Asrava

(Skt.) Pain causing impurity, defilement.

Asura

Titanic demons, enemies of the gods, with whom-especially Indra-they wage war.

Attachment

In the Four Noble truths, Buddha Shakyamuni taught that attachment to self is the root caus
From craving [attachment] springs grief, from craving springs fear; For him who is wholly fre
there is no grief, much less fear. (Dhammapada Sutra. In Narada Maha Thera, The Buddha
If you don't have attachments, naturally you're liberated ... In ancient times, there was an old
who asked for instructions from a monk, "Great Monk, let me ask you, how can I attain libera
monk said, "Who tied you up?" This old cultivator answered, "Nobody tied me up." The mon
you seek liberation?" (Hsuan Hua, tr., Flower Adornment Sutra, "Pure Conduct," chap. 11.)
For the seasoned practitioner, even the Dharma must not become an attachment. As an ana
shirt, it is necessary to use soap. However, if the soap is not then rinsed out, the garment wi
clean. Similarly, the practitioner's mind will not be fully liberated until he severs attachment t
everything, including the Dharma itself.

Avalokitesvara

The name is a compound of Ishwara, meaning Lord, and avalokita, looked upon or seen, an
as the Lord Who Observes (the cries of the world); the Buddhist embodiment of compassion
Mahayana Dharma. Also called Kuan Yin, the Bodhisattva of Compassion. Guan Yin is one
Buddha, represented on his left, Usually recognizable by the small Buddha adorning Her cro
transform into many different forms in order to cross over to the beings. Guan Yin is one of t
Bodhisattva in China.

Avatamsaka (Flower Ornament) Sutra

The basic text of the Avatamsaka School. It is one of the longest sutras in the Buddhist Can
highest teaching of Buddha Shakyamuni, immediately after Enlightenment. It is traditionally
the Sutra was taught to the Bodhisattvas and other high spiritual beings while the Buddha w
Sutra has been described as the "epitome of Buddhist thought, Buddhist sentiment and Bud
is quoted by all schools of Mahayana Buddhism, in particular, Pure Land and Zen.

Awakening vs. Enlightenment

A clear distinction should be made between awakening to the Way (Great Awakening) and a
(attaining Enlightenment). (Note: There are many degrees of Awakening and Enlightenment
Enlightenment of the Arhats, Pratyeka Buddhas, Bodhisattvas, etc. is different from attaining
Enlightenment, i.e., Buddhahood.)

To experience a Great Awakening is to achieve (through Zen meditation, Buddha Recitation
deep realization of what it means to be a Buddha and how to reach Buddhahood. It is to see

comprehend the True Nature of things, the Truth. However, only after becoming a Buddha c
truly attained Supreme Enlightenment (attained the Way). A metaphor appearing in the sutra
of water containing sediments. As long as the glass is undisturbed, the sediments remain at
water is clear. However, as soon as the glass is shaken, the water becomes turbid. Likewis
practitioner experiences a Great Awakening (awakens to the Way), his afflictions (greed, an
are temporarily suppressed but not yet eliminated. To achieve Supreme Enlightenment (i.e.
afflictions, to discard all sediments) is the ultimate goal. Only then can he completely trust hi
actions. Before then, he should adhere to the precepts, keep a close watch on his mind and
cat stalking a mouse, ready to pounce on evil thoughts as soon as they arise. To do otherwi
certain failure, as stories upon stories of errant monks, roshis and gurus demonstrate.

Awakening of the Faith (Treatise)

A major commentary by the Patriarch Asvaghosha (lst/2nd cent.), which presents the fundar
Mahayana Buddhism. Several translations exist in English.

B

Ban T'o

Suddhidanthaka in Sanskrit. Ban T1o was a disciple of Buddha, and he was very forgetful;
taught him the second sentence of a gatha of a sutra he would forget the first one, and wher
third one he would forget the second one. Ultimately, however, with persistence he became

Bardo

The intermediate existence between death and reincarnation -- a stage varying from seven
after which the Karmic body from previous lives will certainly be reborn.

Bhiksu

Religious mendicant; Buddhist fully ordained monk. Bhiksuni is the equivalent term designa

Bhadanta

"Most virtuous"; honorific title apllied to a Buddha.

Bhaisajyaguru

Sanskrit word, the Buddha of Medicine, who quells all diseases and lengthens life. His is the
Pure Land of the Paradise of the East.

Bhutatathata

The true character of reality. The real as thus, always or eternally so. True Suchness.

Bodhi

Sanskrit for Enlightenment. Also Perfect knowledge or wisdom by which a person becomes

Bodhi-Tao

Bodhi-path: The way or path to the Supreme Enlightenment of Buddhahood.

Bodhi Mind (Bodhicitta, Great Mind)

The spirit of Enlightenment, the aspiration to achieve it, the Mind set on Enlightenment. It in
parallel aspects: i) the determination to achieve Buddhahood and ii) the aspiration to rescue

beings.

Bodhimandala

Truth-plot, holy sits, place of Enlightenment, the place where the Buddha attained Enlighten

Bodhisattvas

Those who aspire to Supreme Enlightenment and Buddhahood for themselves and all being can therefore stand for a realized being such as Avalokitesvara or Samantabhadra but also developed the Bodhi Mind, the aspiration to save oneself and others.

Bodhisattva-Tao

The way of the practitioner of Mahayana Buddhism. One following this path aspires to the a Enlightenment for the sake and benefit of all sentient beings.

Brahma Net Sutra (Brahmajala Sutra)

This is a sutra of major significance in Mahayana Buddhism. In addition to containing the te of Mahayana (not to kill, steal, lie, etc.) the Sutra also contains forty-eight less important inju These fifty-eight major and minor precepts constitute the Bodhisattva Precepts, taken by mo and nuns and certain advanced lay practitioners.

Brahmacarya

Lit., Brahma or purified life, usually connoting the practice of celibacy.

Brahmajala

Or Indra's net, characterized by holding a luminous gem in every one of its eyes. (Hindu myt

Brahmin

The highest of the four Castes in Hinduism. They served Brahma, his offering, the keepers o priestly.

Buddha

Lit., the Awakened One; one who through aeons of spiritual development has attained Anutt This epithet usually refers to Sakyamuni Buddha, who lived and taught in India some 2,600

Buddha Nature

The following terms refer to the same thing: Self-Nature, True Nature, Original Nature, Dhar Mark, True Mind, True Emptiness, True Thusness, Dharma Body, Original Face, Emptiness According to the Mahayana view, [buddha-nature] is the true, immutable, and eternal nature Since all beings possess buddha-nature, it is possible for them to attain enlightenment and b regardless of what level of existence they occupy ... The answer to the question whether bu immanent in beings is an essential determining factor for the association of a given school w Mahayana, the two great currents within Buddhism. In Theravada this notion is unknown; he become a buddha is not ascribed to every being. By contrast the Mahayana sees the attainm the highest goal; it can be attained through the inherent buddha-nature of every being throug spiritual practice. (The Shambhala Dictionary of Buddhism and Zen.)

See also "Dharma Nature."

Buddha Recitation

See "Buddha-Remembrance".

Buddha-Remembrance

General term for a number of practices, such as i) oral recitation of Amitabha Buddha's nam visualization/contemplation of His auspicious marks and those of the Pure Land.

In reciting the buddha-name you use your own mind to be mindful of your own true self: how considered seeking outside yourself?

Reciting the buddha-name proceeds from the mind. The mind remembers Buddha and does is called buddha remembrance, or reciting the buddha-name mindfully.

The most common Pure Land technique is recitation of Amitabha Buddha's name. See also

Buddhadharma

Lit., Teaching of Enlightenment. Originally apllied to designate the teaching of Shakyamuni B by the term "Buddhism" in its later historical development.

Buddharupa

A statue or Image of the Buddha, used for devotional purposes.

Bhutatathata

The Real as thus, always or eternally so; i.e., Reality as contrasted with unreality.

C

Caitya

Tumulus, a mausoleum; a place where the relics of Buddha were collected; hence, a place w images are placed.

Cakravala

The nine cakravala or concentric mountain ranges or continents, separated by eight seas, o

Candana

White candana, or white sandalwood.

Chan

See Zen.

Ch'an-Ting

Lit., mind still and quiet: the Chinese translation of the Sanskrit terms Dhyana-Samadhi, mea contemplative practice or yogic absorption.

Charity

or almsgiving, the first Paramitas. There are three kinds of charity in terms of goods, teachin courage (fearlessness). Out of the three, the merits and virtues of the teaching of the Buddh most surpassing. Charity done for no reward here and hereafter is called pure or unsullied, w charity is done for the purpose of personal benefits. In Buddhism, the merits and virtues of p the best.

Chiliocosm
Countless Universes.
Chih-Kuan
In practice there are three contemplations; seeing such abstractions: (1) by fixing the mind c
navel, etc. (2) by stopping every thought as it arises; (3) by dwelling on the thought that no t
itself, but from a preceding cause.
Chung Yin Shen
See Bardo.
Cintamani
The talismanic pearl, a symbol of bestowing fortune and capable of fulfilling every wish.
Citta
Mind or heart. the two terms being synonymous in Asian religious philosophy.
Conditioned (compounded)
Describes all the various phenomena in the world - made up of separate, discrete elements,
with no intrinsic nature of their own. Conditioned merits and virtues lead to rebirth within sam
unconditioned merits and virtues are the causes of liberation from Birth and Death. See als
"Unconditioned."
D

Dana
The practice of generosity or charity: one of the Paramitas as well as one of the All-Embraci
it means, in the latter, giving others what they want just to lead them towards the truth.
Dedication of Merit
See "Transference of Merit."
Delusion (Ignorance)
"Delusion refers to belief in something that contradicts reality. In Buddhism, delusion is ... a
awareness of the true nature or Buddha nature of things, or of the true meaning of existence
the Buddhist outlook, we are deluded by our senses-- among which intellect (discriminating,
thought) is included as a sixth sense. Consciousness, attached to the senses, leads us into
us to take the world of appearances for the world of reality, whereas in fact it is only a limited
fleeting aspect of reality." (The Shambhala Dictionary of Buddhism and Zen.)
Demons
Evil influences which hinder cultivation. These can take an infinite number of forms, includin
hallucinations. Disease and death, as well as the three poisons of greed, anger and delusion
to demons, as they disturb the mind.
The Nirvana Sutra lists four types of demon: i) greed, anger and delusion; ii) the five skanda
obstructions caused by physical and mental functions; iii) death; iv) the demon of the Sixth H
Desire).

The Self-Nature has been described in Mahayana sutras as a house full of gold and jewelry
riches, i.e., to keep the mind calm, empty and still, we should shut the doors to the three thie
anger and delusion. Letting the mind wander opens the house to "demons," that is, hallucina
Thus, Zen practitioners are taught that, while in meditation, "Encountering demons, kill the d
encountering Buddhas, kill the Buddhas." Both demons and Buddhas are mind-made, Mind
For a detailed discussion of demons, see Master Thich Thien Tam, Buddhism of Wisdom an

Devakanya

Goddess in general attendance on the regents of the sun and moon.

Deva

Lit., "A shining one". An inhabitant of the heavenly realms, which is characterized by long life
surroundings and blissful states of mind. In the Buddhist tradition, these states are understo
impermanent, not eternal.

Deva King

The four Deva Kings in the first, or lowest, Devaloka on its four sides are the following: East-
South-Virodhaka; West-Viropaksa; North-Dhanada, or Vaisravana.

Dharani

Extended mantra used in esoteric branch of Buddhism to focus and expand the mind. Its wo
not communicate any recognizable meaning.

Dharma

a) The teachings of the Buddhas (generally capitalized in English); b) duty, law, doctrine; c)
phenomena, everything.

Dharma-dhatu

The Law-doctrine that is the reality behind being and non-being. It is interpenetrative and all
just as the rotation of the earth holds both night and day.

Dharma Door

The doctrines or wisdom of Buddha regarded as the doorway to Enlightenment; a method.
84,000 delusions, so the Buddha provides 84,000 methods (Dharma-Doors) to deal with the

Dharma-Ending Age, Degenerate Age, Last Age.

The present spiritually degenerate era, twenty-six centuries after the demise of Shakyamuni
concept of decline, dissension and schism within the Dharma after the passing of the Buddh
teaching of Buddhism and a corollary to the Truth of Impermanence. See, for example, the D
6 in the translation by A.F. Price and Wong Mou-lam). The time following Buddha Shakyamu
into three periods: i) the Perfect Age of the Dharma, lasting 500 years, when the Buddha's te
meditation) was correctly practiced and Enlightenment often attained; ii) the Dharma Sembla
about 1,000 years, when a form of the teaching was practiced but Enlightenment seldom att
Dharma-Ending Age, lasting some ten thousand years, when a diluted form of the teaching
Enlightenment is rarely attained.

Dharma Gate

See "Dharma Door."

Dharma Nature

The intrinsic nature of all things. Used interchangeably with "emptiness," "reality." See also "
Nature."

Dharmakara

The Bodhisattva who later became Amitabha Buddha, as related in the Longer Amitabha Su
Dharmakara is famous for forty-eight Vows, particularly the eighteenth, which promises rebi
Land to anyone who recites His name with utmost sincerity and faith at the time of death.

Dharmakaya

See "Three bodies of the Buddha."

Dasabhumi

The "Ten Stages" in the fifty-two sections of the development of a Bodhisattva into a Buddha

Dhyana

The practice of concentration--i.e., meditation. Also, more specifically, the four form concent
four formless concentrations.

Diamond Sutra

"An independent part of the Prajnaparamita Sutra, which attained great importance, particula
It shows that all phenomenal appearances are not ultimate reality but rather illusions, projec
own mind ... The work is called Diamond Sutra because it is 'sharp like a diamond that cu
unnecessary conceptualizations and brings one to the further shore of enlightenment.'" (The
Dictionary of Buddhism and Zen.)

Difficult Path of Practice (Path of the Sages, Self-Power Path)

According to Pure Land teaching, all conventional Buddhist ways of practice and cultivation
the Vinaya School ...), which emphasize self-power and self-reliance. This is contrasted to th
Practice, that is, the Pure Land method, which relies on both self-power and other-power (th
assistance of the Buddhas and Bodhisattvas).

Duskrta

Wrongdoing, evil action, misdeed, sin; external sins of the body and the mouth; a light sin.

Dusts (Worldly Dusts)

A metaphor for all the mundane things that can cloud our bright Self-Nature. These include f
taste, touch, dharmas (external opinions and views). These dusts correspond to the five sen
discriminating, everyday mind (the sixth sense, in Buddhism).

Dviyana

Lit., two vehicles. The two vehicles or practice paths of Sravakayana and Pratyekabuddhaya

Dwo-Shih

An unusual term indicating one who has practiced the Tao with great diligence and blessing
lifetime and who, after his death, does not want to enter just any womb, but prefers to wait
auspicious condition, usurping such a good position from another, less highly developed sp

E

Easy Path of Practice
Refers to Pure Land practice. The Easy Path involves reliance on the power of the Buddhas particular Buddha Amitabha ("other-power") in addition to one's own cultivation("self-power") contrasted with primary reliance on self-power (Difficult Path of Practice), taught in other Bu Equal reliance on self-power and other-power distinguishes the Pure Land School from mos Buddhism. The distinction is, however, a matter of emphasis, as all schools of Buddhism re lesser extent, on both self-power and other-power. See also "Other-power".
Eight Divisions of Gods and Dragons
Devas (gods), Nagas (Dragons) and others of eight divisions (classes): deva, nagas, yakas, garudas, kinaras, mahoragas.
Eight Sufferings
(1) Suffering of Birth; (2) Suffering of Old Age; (3) Suffering of Sickness; (4) Suffering of Dea Suffering of being apart from the loved ones; (6) Suffering being together with the despised Suffering of not getting what one wants; (8) Suffering of the flourishing of the Five Skandhas
Eight Winds
Winds of Eight Directions. Most people are usually moved by the winds of the eight directior Ridicule; (3) Suffering; (4)Happiness; (5) Benefit; (6) Destruction; (7) Gain; (8) Loss.
Eightfold Path
The eight right ways leading to the cessation of sufferings. (1) Right View; (2) Right Thought Speech; (4) Right Action; (5) Right Livelihood; (6) Right Effort; (7) Right Remembrance; (8) Concentration.
Endurance (World)
See "Saha World."
Enlightenment
See "Awakening vs. Enlightenment."
Evil Paths
The paths of hells, hungry ghosts, animality. These paths can be taken as states of mind; i.e has a vicious thought of maiming or killing another, he is effectively reborn, for that moment,
Expedient means (Skillful means, Skill-in-means, Upaya)
Refers to strategies, methods, devices, targeted to the capacities, circumstances, likes and sentient being, so as to rescue him and lead him to Enlightenment. "Thus, all particular form Teaching are just provisional expedients to communicate the Truth (Dharma) in specific con Cleary.) "The Buddha's words were medicines for a given sickness at a given time," always to the conditions of the audience.
Externalists

Literally, followers of non-Buddhist paths. This term is generally used by Buddhists with refe
followers of other religions.

F

Five Bhikshus

The first five of Buddha's converts: Ajnata-Kaundinya, Asvajit, Bhadrika, Dasabala-Kasyapa
Mahanama-Kulika. They were the first five disciples that Shakyamuni preached when he bec

Five Corruptions

See "Five Turbidities."

Five Desires (Five Sensual Pleasures)

Desires connected with the five senses, i.e., form, sound, aroma, taste and touch.

Five Eyes

1. human eye; 2. divine eye; 3. dharma eye; 4. wisdom eye; 5. Buddha eye.

Five Fundamental Conditions of Passions and Delusions

1. Wrong views which are common to triloka; 2. Clinging or attachment in the desire realm; 3
attachment in the form realm: 4. Clinging or attachment in the formless realm which is still m
state of unenlightenment which is the root-cause of all distressful delusion.

Five Natures

The natures of (1) Bodhisattvas, (2) Sravakas and Pratyeka buddhas, (3) ordinary good peo
(5) heretics.

Five Offenses

The five rebellious acts or deadly sins: (1) parricide; (2) matricide; (3) killing an arhat; (4) she
blood of a Buddha; (5) destroying the harmony of the sangha, or fraternity.

Five Precepts

The precepts taken by lay Buddhists, prohibiting i) killing, ii) stealing iii) lying, iv) sexual misc
v) ingesting intoxicants. See also "Ten Precepts."

Five Skandhas

The five groups of elements (Dharmas) into which all existences are classified in early Budd
are: Rupa (matter), Vedana (feeling), Sanjna (ideation); Samskara (forces or drives) Vijnana
or sensation). Group, heap, aggregate; the five constituents of the personality; form, feeling
impulses, consciousness; the five factors constituting the individual
person.

Five Turbidities (Corruptions, Defilements, Depravities, Filths, Impurities)

They are. 1. the defilement of views, when incorrect, perverse thoughts and ideas are predo
defilement of passions, when all kinds of transgressions are exalted; 3. the defilement of the
condition, when people are usually dissatisfied and unhappy; 4. the defilement of the life-spa
human life-span as a whole decreases; S. the defilement of the world-age, when war and na
rife. These conditions, viewed from a Buddhist angle, however, can constitute aids to Enligh

may spur practitioners to more earnest cultivation.

Flower Store World

The entire cosmos, consisting of worlds upon worlds ad infinitum, as described in the Avatar
the realm of Vairocana Buddha, the transcendental aspect of Buddha Shakyamuni and of al
World, the Western Pure Land and, for that matter, all lands and realms are within the Flowe

Four Aspects (of Buddha Dharma)

(1) the teaching; (2) the principle; (3) the practice; (4) the fruit/reward/result.

Four Elements

All matters are formed and are composed by four conditioned causes :
(1) earth, which is characterized by solidity and durability; (2) water, which is characterized b
liquid/fluid and moisture; (3) fire, which is characterized by energy and warmth; (4) wind, wh
characterized by gas/air movement.

Four Fruits of the Arhat

See under Arhat entry.

Four Great Bodhisattva

They represent the four major characters of Bodhisattva:
1.Manjusri - Universal Great Wisdom Bodhisattva;
2.Samantabhadra - Universal Worthy Great Conduct Bodhisattva;
3.Ksitigarbha - Earth Store King Great Vow Bodhisattva;
4.Avalokitesvara - Guan Shr Yin Great Compassion Bodhisattva.

Four Great Vows (Four Universal Vows)

The four vows held by all Bodhisattvas. These vows are called great because of the wondro
compassion involved in fulfilling them. They are as follows: Sentient beings without number
enlighten; Vexations without end we vow to eradicate; Limitless approaches to Dharma we v
Supreme Awakening we vow to achieve.

Four Noble Truths

1) Sufferings; 2) Cause of Sufferings; 3) Cessation of sufferings; 4) The Path leading to the
sufferings.

Four Pure Lands

A classification by the Pure Land and T'ien T'ai schools of the pure realms subsumed under
Amitabha Buddha, as described in the sutras. They are:
i) the Land of Common Residence of Beings and Saints (Land Where Saints and Ordinary B
where all beings, from the six lower worlds (hells, hungry ghosts ...) to the Buddhas and Bo
together (further divided into two, the Common Residence Pure Land and Common Resider
ii) the Land of Expediency (Land of Expedient Liberation), inhabited by Arhats and lesser Bo
iii) the Land of Real Reward, inhabited by the highest Bodhisattvas;
iv) the Land of Eternally Quiescent Light, in which the Buddhas dwell.
These distinctions are at the phenomenal level. At the noumenon level, there is, of course, n

among them.
Four Reliance (to learning Buddhist Dharma)
The four standards of Right Dharma which buddhist should rely on or abide by:
(1) to abide by the Dharma, not the person;
(2) to abide by the sutras of ultimate truth, not the sutras of incomplete truth;
(3) to abide by the meaning, not the word;
(4) to abide by the wisdom, not the consciousness.
Four Unlimited Mind
The mind of Bodhisattva: 1. Kindness; 2. Compassion; 3. Delight; 4. Renunciation.
Four Virtues
The four Nirvanic virtues: (1) Eternity or permanence; (2) Joy; (3) Personality; (4) Purity. The
important virtues are affirmed by the sutra in the transcendental or nirvana-realm.
Four Ways (of learning Buddhist Dharma)
(1) Belief/faith; (2) Interpretation/discernment; (3) Practice/performance; (4) Verification/assu
are the cyclic process in learning a truth.
Four Wisdom
The forms of wisdom of a Buddha. (1) the Great- Mirror wisdom of Aksobhya; (2) the Univers
Ratnaketu; (3) the Profound Observing Wisdom of Amitabha; (4) the Perfecting Wisdom of
Fourfold Assembly
Or the Four Varga (groups) are bhiksu, bhiksuni, upasaka and upasika, i.e. monks, nuns, ma
devotees.

G

Good Spiritual Advisor
Guru, virtuous friend, wise person, Bodhisattva, Buddha -- anyone (even an evil being!) who
practitioner progress along the path to Enlightenment. This notwithstanding, wisdom should
factor in the selection of such an advisor: the advisor must have wisdom, and both advisor a
must exercise wisdom in selecting one another.
Great Awakening
See "Awakening vs. Enlightenment."
Great Vehicle
See Mahayana.

H

Hua T'ou
Lit., ante word. The reality prior to the arising of thought.

Heaven of the Thirty-Three
A heaven in the Realm of Desire, with thirty-two god-kings presided over by Indra, thus total located at the summit of Mt. Sumeru (G.C.C. Chang).
Heretical views
The sutras usually refer to sixty-two such views. They are the externalist (non-Buddhist) viev Buddha Shakyamuni's time.
Hinayana
The Lesser Vehicle; a term applied by the Mahayana to those schools of Buddhism that prac fruits of Sravakayana and Pratyeka buddhayana and do not attempt to attain the Anuttara- Buddha.
Holy One
Holy or Saintly One; One who has started on the path to Nirvana.

I

Icchantika
One who has no interest in the path to Awakening, or one whose good roots are completely

J

Jambunada-suvarna
Jambu River gold; the golden sand of the Jambu river.
Jetavana
A park near the city of Sravasti, said to have been obtained from Prince Jeta by Anathapindi monasterial buildings were erected; the favorite resort of Sakyamuni.
Jewel Net of Indra
This is a net said to hang in the palace of Indra, the king of the gods. At each interstice of th reflecting jewel, which mirrors not only the adjacent jewels but the multiple images reflected famous image is meant to describe the unimpeded interpenetration of all and everything.

K

Kalpa
Periodic manifestations and dissolutions of universes which go on etemally. Great kalpas asamkhiya kalpas corresponding to childhood. maturity, old age and the death of the univer
Karma
Volition, volitional or intentional activity. Karma is always followed by its fruit, Vipaka. Karma are oftentimes referred to as the law of causality, a cardinal concern in the Teaching of the B

Common karma: the difference between personal and common karma can be seen in the fo
country goes to war to gain certain economic advantages and in the process, numerous sold
are killed or maimed. If a particular citizen volunteers for military service and actually particip
carnage, he commits a personal karma of killing. Other citizens, however, even if opposed to
benefit directly or indirectly (e.g., through economic gain). They are thus said to share in the
of killing of their country.
Fixed karma: in principle, all karma is subject to change. Fixed karma, however, is karma wh
changed in extraordinary circumstances, because it derives from an evil act committed simu
mind, speech and body. An example of fixed karma would be a premeditated crime (versus
Kaliraja
A king of Magadha noted for his violence; it is said that in a former incarnation he cut off the
and hands of the Buddha, who bore it all unmoved.
Kasaya
The monk1s robe, or cassock.
Klesa
Passion, desire, impulse, instinctive desires, including 1) craving; 2) hatred; and 3) ignoranc
forces, passions, instinctive cravings, drives, defilements, desires; that which binds one in sa
Ksana
An inconceivably short mind-moment.
Ksanti
Patience or forbearance, one of the Six Paramitas.
Ksantyrsi
The Rsi who patiently suffered insult; i.e., Sakyamuni, in a former life, suffering mutilation in
convert Kaliraja.
Ksatriya
The second of the four Hindi Castes at the time of Shakyamuni, they were the royal caste, th
the warriors and the ruling castes.

L

Laksana
A distinctive mark, sign, indication, characteristic or designation. A Buddha is recognized by
characteristic physiological marks.
Lankavatara Sutra
The only sutra recommended by Bodhidharma, the First Zen Patriarch in China. It is a key Z
the Diamond Sutra (recommended by the Sixth Patriarch), the Surangama Sutra, the Vimala
Avatamsaka Sutra ... The last four sutras are referred to frequently in Pure Land commentar
Last Age

See "Dharma-Ending Age."

Law of Interdependent Causation

It states that all phenomena arise depending upon a number of casual factors. In other word
exists in condition that the other exist; it has in condition that others have; it extinguishes in c
that others extinguish; it has not in condition that others have not. For existence, there are tw
the chain:

* Ignorance is the condition for karmic activity;
* Karmic activity is the condition for consciousness;
* Consciousness is the condition for the name and form;
* Name and form is the condition for the six sense organs;
* Six sense organs are the condition for contact;
* Contact is the condition for feeling;
* Feeling is the condition for emotional love/craving;
* Emotional love/craving is the condition for grasping;
* Grasping is the condition for existing;
* Existing is the condition for birth;
* Birth is the condition for old age and death;
* Old age and death is the condition for ignorance; and so on.

Lesser Vehicle

The early Buddhism. A term coined by Mahayanists to distinguish this school of Buddhism [v
descendent is Theravada] from Mahayana. It is so called because the teaching of this schoo
one's own liberation, whereas the teaching of Mahayana stresses the attainment of Buddhal
beings. Theravada is now prevalent in southeast Asia, while Mahayana has spread over the
Vietnam, Korea, Japan ...) (G.C.C. Chang).

Lotus Grades

The nine possible degrees of rebirth in the Western Pure Land. The more merits and virtues
accumulates, the higher the grade.

Lotus Sect

A Buddhist sect founded by the great Master Hui Yuan about 390 A.D. at his monastery on
Province in China. The Lotus Sect believes in and honors Amitabha Buddha and declares
chanting of his name and by purifying and finally ridding oneself of desire, one can be rebor
Land. There one is born of a lotus, and, depending on one's degree of purification and pract
into one of the nine grades of the lotus: upper superior, middle superior, lower superior, etc

Lotus Sutra

Or Saddharma-pundarika, Dharma Flower, or "The Lotus of the True Law." The sutra is the
sect (T'ien-t'ai in Chinese). Among the sutras of the Mahayana canon.

One of the earliest and most richly descriptive of the Mahayana sutras of Indian origin. It bec
for the shaping of the Buddhist tradition in East Asia, in particular because of its teaching of

Vehicle under which are subsumed the usual Hinayana [Theravada] and Mahayana division
the Tendai [T'ien T'ai] school. (Joji Okazaki.)
This School has a historically close relationship with the Pure Land School. Thus, Master T'a
the Lotus Sutra and the Amitabha Sutras were closely connected, differing only in length.
Lotus Treasury World
See "Ocean-Wide Lotus Assembly."

M

Maha-Bodhisattva
Also, Mahasattva; a great Bodhisattva who has reached the advanced stage of Enlightenme
Mahakaruna
Great compassion.
Mahakasyapa
Also, Kasyapa; one of Buddha's disciples. The Ch'an Sect, according to its tradition, claims
patriarch.
Maharaja
A great or superior king.
Mahayama
The mother of Shakaymuni. She was a Koliyan Princess and married to Suddhodana.
Mahayana
Lit., great vehicle; the dominant Buddhist tradition of East Asia. Special characteristics of Ma
Emphasis on bodhisattva ideal, 2. The accession of the Buddha to a superhuman status, 3.
extensive philosophical inquiry to counter Brahmanical and other scholarly argument, 4. The
elaborate devotional practice.
Mahasattva
See Maha-Bodhisattva.
Mahasthamaprapta (Shih Chih, Seishi)
One of the three sages in Pure Land Buddhism, recognizable by the water jar (jeweled pitch
crown. Usually represented in female form in East Asian iconography. Amitabha Buddha is f
standing between the Bodhisattvas Avalokitesvara and Mahasthamaprapta.
Maitreya
Sanskrit word, literally means friendly and benevolent. He will be the next Buddha in our wo
preaching in Tusita Heaven. In China, he is usually represented as the fat laughing Buddha.
Maitri
Loving-kindness.
Manas
The name of the seventh of the eight consciousnesses. I refers to the faculty of thought, the

function of consciousness.

Mani

A jewel, gem, precious stone; especially a pearl bead or other globular ornament.

Mantra

A syllable, word or verse which has been revealed to a seer in meditation, embodiment in so
spell or incantation.

Mara

Death; the slayer and foe of what is skillful and wholesome. The Buddhist "Tempter"; the pe
all evil and passion, whose baits and snares are the sensory pleasures. Sometimes identifie
skandhas and with what is impermanent, suffering and not-self; Devil, the Evil One, the Grea
Demon King, who attempted to destroy Buddha and Buddhism.

Marks

Characteristics, forms, physiognomy. Marks are contrasted with essence, in the same way
contrasted with noumenon. True Mark stands for True Form, True Nature, Buddha Nature, a
True Mark of all phenomena is like space: always existing but really empty; although empty,
The True Mark of the Triple World is No-Birth/No-Death, not existent/not non-existent, not lik
that. True Mark is also called "Self-Nature," "Dharma Body," the "Unconditioned," "True Thu
"Dharma Realm.11 See also "Noumenon/Phenomena."

Meditation Sutra

One of the three core sutras of the Pure Land school. It teaches sixteen methods of visualiz
Buddha, the Bodhisattvas and the Pure Land. This sutra stresses the element of meditation
also "Three Pure Land Sutras," "Vaidehi," "Visualization."

Merit and Virtue

These two terms are sometimes used interchangeably. However, there is a crucial differenc
blessings (wealth, intelligence, etc.) of the human and celestial realms; therefore, they are te
subject to Birth and Death. Virtues, on the other hand, transcend Birth and Death and lead t
virtues are mentioned in Pure Land Buddhism: eternity; happiness; True Self; purity. An id
(e.g., charity) can lead either to merit or virtue, depending on the mind of the practitioner, tha
whether he is seeking mundane rewards (merit) or transcendence (virtue). Thus, the Pure L
should not seek merits for by doing so, he would, in effect, be choosing to remain within sam
be counter to his very wish to escape Birth and Death.

Middle Vehicle

Also called Middle Doctrine School or Madhyamika; one of the two main schools of Mahayan
the Void as the only really real or independent, unconditioned Reality.

Mind

Key concept in all Buddhist teaching.

Frequent term in Zen, used in two senses: (1) the mind-ground, the One Mind ... the buddha
thusness ... (2) false mind, the ordinary mind dominated by conditioning, desire, aversion, ig

false sense of self, the mind of delusion ... (J.C. Cleary, A Buddha from Korea.)
The ordinary, deluded mind (thought) includes feelings, impressions, conceptions, conscious
Self-Nature True Mind is the fundamental nature, the Original Face, reality, etc. As an analo
Self-Nature True Mind is to mind what water is to waves -- the two cannot be dissociated. Th
but they are also different. To approach the sutras "making discriminations and nurturing att
different from the Zen allegory of a person attempting to lift a chair while seated on it. If he w
get off the chair, he could raise it easily. Similarly, the practitioner truly understands the Dha
the extent that he "suspends the operation of the discriminating intellect, the faculty of the in
dialogue through which people from moment to moment define and perpetuate their custom
perception." (See this book, Introduction.)
See also the following passage:
The mind ... "creates" the world in the sense that it invests the phenomenal world with value
this situation, according to Buddhism, is to still the mind, to stop it from making discriminatio
nurturing attachments toward certain phenomena and feelings of aversion toward others. W
calmness of mind is achieved, the darkness of ignorance and passion will be dispelled and t
perceive the underlying unity of the absolute. The individual will then have achieved the stat
enlightenment and will be freed from the cycle of birth and death, because such a person is
indifferent to them both. (Burton Watson, The Zen Teachings of Master Lin-Chi.)
Mindfulness of the Buddha
Synonymous with Buddha Recitation. See "Buddha Recitation."
Mount Sumeru
The central mountain of every universe. Also called Wonderful Height, Wonderful Brilliancy,

N

Nagarjuna (2nd/3rd cent.)
"One of the most important philosophers of Buddhism and the founder of the Madhyamika s
major accomplishment was his systematization of the teaching presented in the Prajnap
Nagarjuna's methodological approach of rejecting all opposites is the basis of the Middle Wa
Dictionary of Buddhism and Zen.)
Narayana
Name of a deva, a strong, manly hero having divine power.
Nirmanakaya
See "Three bodies of the Buddha."
Nirvana
The deathless; the cessation of all suffering. The very opposite of the Wheel of Birth-and-De
those in the Buddhist tradition aspire to experience. The Absolute, which transcends design
characterization.

Nirvana Sutra
The last of the sutras in the Mahayana canon. It emphasizes the importance of Buddha-natu
as Self-Nature.
Non-Birth (No-Birth)
"A term used to describe the nature of Nirvana. In Mahayana Buddhism generally, No-Birth
'extinction' of the discursive thinking by which we conceive of things as arising and perishing
attachments to them." (Ryukoku University.) See also "Tolerance of Non-Birth."

O

Ocean-Wide Lotus Assembly
The Lotus Assembly represents the gathering of Buddha Amitabha, the Bodhisattvas, the sa
other superior beings in the Land of Ultimate Bliss. This Assembly is "Ocean-Wide" as the p
infinite in number -- spreading as far and wide as the ocean. The term Ocean-Wide Assemb
associated with the Avatamsaka Sutra, a text particularly prized by the Pure Land and Zen s
Once-returner
A sage who has only one rebirth left before reaching Arhatship and escaping birth and death
One-Life Bodhisattva
A Bodhisattva who is one lifetime away from Buddhahood. The best known example is the
One-Vehicle Dharma
The one Yana, the vehicle of Oneness. The one Buddhayana, the One Vehicle, i.e., Mahay
the final or complete Law of the Buddha and not merely a part, or preliminary stage, as in H

Ultimate Enlightenment. The Lankavatara Sutra (the only sutra recommended by Bodhidha
Sutra (described by D.T. Suzuki as the epitome of Buddhist thought) are emphatically clear
As long as [conversion] is an experience and not mere understanding, it is evident that self-
an important role in the Buddhist life . but .. we must not forget the fact that the Lanka [Lank
also emphasizes the necessity of the Buddha's power being added to the Bodhisattvas', in
of spiritual development and in the accomplishment of their great task of world salvation.
Teitaro Suzuki, tr., The Lankavatara Sutra, p. xviii.)
The Avatamsaka Sutra states:
Having purified wisdom and means in the seventh stage ...
The great sages attain acceptance of non-origination ...
On the basis of their previous resolution, the buddhas further exhort them ...:
"Though you have extinguished the burning of the fire of affliction,
Having seen the world still afflicted, remember your past vows;

Having thought of the welfare of the world, work in quest Of the cause of knowledge, for the
world."
(T. Cleary, tr., The Flower Ornament Sutra, Vol II, p. 86)
See also "Easy Path of Practice."

P

Parajika
Lit., defeat or the conditions leading to the defeat of the Bodhicitta. Also. the conditions lead
defeat of the Bhiksu's life.
Paramita
: Refers to the six practices, the perfection of which ferries one beyond the sea of suffering
to Nirvana. The six Paramitas are the following: (1) Dana, charity or giving, including the be
truth on others; (2) Sila, keeping the discipline; (3) Ksanti, patience under suffering and ins
Virya, zeal and progress; (5) Dhyana, meditation or contemplation; (6) Prajna, wisdom, the
reality or truth. It is the perfection of the last one -- Prajna -- that ferries sentient beings acr
ocean of Samsara (the sea of incarnate life) to the shores of Nirvana.
Parinirvana
The Buddha's final Nirvana, entered by him at the time of death.
Polar Mountain
In Buddhist cosmology, the universe is composed of worlds upon worlds7 ad infinitum. (Our
small part of one of these worlds). The Polar Mountain is the central mountain of each world
Polaris
The North Star, polestar; star of the second magnitude, standing alone and forming the end
constellation Ursa Minor; it marks very nearly the position of the north celestial pole.
Prajna
True or transcendental wisdom. Last of the paramitas. One of the highest attainments of Bu
Pratyeka Buddha
A solitary Buddha; one who has achieved Awakening through insight into the dependent orig
body. Pratyekabuddhas lead only solitary lives, and they do not teach the Dharma to others
any desire to do so.
Pretas
Hungry ghosts. who are tormented by continual and unsatisfied cravings. The preta-realm is
states of woe (apaya-bhumi) and one of the six realms of existence.
Priyavacana
Lit., loving or affectionate speech. This beautiful and affectionate speech is one of the Four
Virtues and is used to lead sentient beings toward the truth.
Pure Land

Generic term for the realms of the Buddhas. In this text it denotes the Land of Ultimate Bliss
of Amitabha Buddha. It is not a realm of enjoyment, but rather an ideal place of cultivation, b
Triple Realm and samsara, where those who are reborn are no longer subject to retrogressi
distinction between the Western Pure Land and such realms as the Tusita Heaven. There a
the Pure Land: as different and apart from the Saha World and as one with and the same as
the mind is pure and undefiled, any land or environment becomes a pure land (Vimalakirti, A
...). See also "Triple Realm."

Pure Land School

When Mahayana Buddhism spread to China, Pure Land ideas found fertile ground for devel
century, the movement crystallized with the formation of the Lotus Society, founded by Mast
(334-416), the first Pure Land Patriarch. The school was formalized under the Patriarchs T'a
and Shan Tao (Zendo). Master Shan Tao's teachings, in particular, greatly influenced the d
Japanese Pure Land, associated with Honen Shonin (Jodo school) and his disciple, Shinran
school) in the 12th and 13th centuries. Jodo Shinshu, or Shin Buddhism, places overwhelm
element of faith.

[Pure Land comprises the schools] of East Asia which emphasize aspects of Mahayana Bud
Amida, meditation on and recitation of his name, and the religious goal of being reborn in his
"Western Paradise." (Keith Crim.)

Note: An early form of Buddha Recitation can be found in the Nikayas of the Pali Canon:

In the Nikayas, the Buddha ... advised his disciples to think of him and his virtues as if they s
before their eyes, whereby they would be enabled to accumulate merit and attain Nirvana or
transmigrating in the evil paths ... (D.T. Suzuki, The Eastern Buddhist, Vol.3, No.4, p.317.)

Pure Land Sutras

See "Three Pure Land Sutras."

Q

R

S

Saddharma-pundarika

See entry under Lotus Sutra.

Saha World

World of Endurance. Refers to this world of ours, filled with suffering and afflictions, yet glad
its inhabitants.

Sakra
God of the sky who fights the demons with his vajra, or thunderbolt.
Sage
A wise and virtuous person, an accomplished one who is second in rank to a saint.
Sala
Or Salavana, the grove of sal(teak) trees near Kusinagara, the place of the Buddha's death.
Samadhi
Deep concentration: the state of one-pointedness of mind characterized by peace and impe
is also one of the Paramitas and is indispensable on the path to Bodhi.
Samanarthata
Cooperation with and adaptation to others for the sake of leading them towards the truth. Sa
of the Four All-Embracing Virtues.
Samantabhadra
Also called Universal Worthy or, in Japanese, Fugen. A major Bodhisattva, who personifies
practices and vows of the Buddhas (as compared to the Bodhisattva Manjusri, who represen
wisdom). Usually depicted seated on an elephant with six tusks (six paramitas). Best known
Vows."
Samatha
Quiet, tranquillity, calmness of mind, absence of mind.
Sambhogakaya
See "Three bodies of the Buddha."
Samsara
Cycle of rebirths; realms of Birth and Death.
Samyak Sambodhi
Correct universal intelligence; correct, equal or universal Enlightenment.
Sangha
Lit., harmonious community. In the Buddhadharma, Sangha means the order of Bhiksus, B
and Sramanerikas. Another meaning is the Arya Sangha, made up of those individuals, lay
attained one of the four stages of sanctity. Also, the Bodhisattva Sangha.
Sangharama Body
A monastery with its garden or grove, a universal body.
Sanskrit
Learned language of India. Canonical texts of Mahayana Buddhism in its Indian stage were
Sariputra
Major disciple of Shakyamuni Buddha, foremost in wisdom among His Arhat disciples.
Sastra
Commentary; the commentaries constitute one of the three parts of the Buddhist canonical s
Self-Nature

One's own Original Nature, one's own Buddha Nature.
Self-Power
See "Difficult Path of Practice."
Seven Treasures
Gold, silver, lapis lazuli, crystal, agate, red pearl and carnelian. They represent the seven pc
perseverance, sense of shame, avoidance of wrongdoing, mindfulness, concentration and w
Siddham
Blessed, endowed with supernatural faculties. This same term refers to the Sankrit alphabet
likewise, transliterated as Hsi-ta in Chinese.
Siddhanta
The four siddhanta. The Buddha taught by (1) mundane of ordinary modes of expression; (2
treatment, adapting his teaching to the capacity of his hearers; (3) diagnostic treatment of th
diseases; and (4) the perfect and highest truth.
Siksamana
A lay-disciple who maintains the eight precepts, either temporarily or as preparation for leav
Sila
Moral precepts. These number 5,8,10,250 or 350. Also, one of the Paramitas.
Six Directions
North, South, East, West, above and below, i.e., all directions. In the Avatamsaka Sutra, the
include points of the compass in between and are referred to as the Ten Directions.
Six Dusts
See "Dusts."
Six Organs
The six indriyas, or sense organs: eye, ear, nose, tongue, body and mind.
Six Paramitas
See "Paramita"

Six Planes of Existence (Six Paths)
The paths within the realm of Birth and Death. Includes the three Evil Paths (hells, hungry gl
and the paths of humans, asuras and celestials. These paths can be understood as states o
"Evil Paths."
Sixth Patriarch
Hui Neng (638-713), the Sixth Patriarch of the Chinese Zen school and author of the Platfor
Skandhas
As taught by the Buddha, the skandhas are the components of the human so-called entity th
changing. They are: I. Name/form; 2. Feeling; 3. Conception; 4. Impulse; 5. Consciousness.
Skillful Means

See "Expedient Means."

Small Vehicle

See entry under Hinayana.

Spiritual power

Also called miraculous power. Includes, inter alia, the ability to see all forms (deva eye), to h
sounds (deva ear), to know the thoughts of others, to be anywhere and do anything at will.

Sramana

Lit., laborer; applied to those who wholeheartedly practice toward enlightenment; root word c
for novice monk.

Sramanera

A novice monk holding the 10 precepts.

Sramanerika

A novice nun holding the 10 precepts.

Sravakas

"Lit., 'voice-hearers': those who follow [Theravada] and eventually become arhats as a resul
the buddhas and following their teachings" (A. Buzo and T. Prince.) See also "Arhat."

Sudhana (Good Wealth)

The main protagonist in the next-to-last and longest chapter of the Avatamsaka Sutra. Seek
he visited and studied with fifty-three spiritual advisors and became the equal of the Buddha
lifetime. Both his first advisor and his last advisor (Samantabhadra) taught him the Pure Lan

Suddhodana

Pure Rice King, the father of Shakyamuni, ruled over the Sakyans at Kapilavatthu on the Ne

Sudra

The lowest of the four Hindi Castes at the time of Shakyamuni. They were peasants, slaves

Sumeru

Lit., exalted, excellent; the mythical "world mountain" that rises through the center of a Budd

Surangama Sutra

Also called Heroic Gate Sutra.

The "Sutra of the Heroic One" exercised a great influence on the development of Mahayana
[and neighboring countries]. It emphasizes the power of samadhi, through which enlightenm
and explains the various methods of emptiness meditation through the practice of which eve
realize ... enlightenment „ (Shambhala Dictionary of Buddhism and Zen.)

Sutra

An aphorism; a thread of suggestive words or phrases summarizing religious and philosophi
buddhism, it refers to a discourse by the Buddha or one of his major disciples. The Sutra col
the three divisions of the Buddhist scriptures.

T

Tao
Path or Way. The Sanskrit equivalent to this Chinese term is marga.
Tathagata
Usually translated as "Thus Come One."
He who came as did all Buddhas, who took the absolute way of cause and effect, and attain
one of the highest titles of a Buddha (Charles Luk).
Ten Directions
North, South. East, West; N-F, N-W, S-F, S-W, Zenith and Nadir.
Ten Evil Acts (Ten Evil Deeds, Ten Sins)
1. Killing; 2.stealing; 3. sexual misconduct; 4. lying; 5. slander; 6. coarse language; 7. empty
covetousness; 9. angry speech; 10. wrong views. See also "Ten Precepts."
Ten Great Vows
The famous vows of the Bodhisattva Samantabhadra in the Avatamsaka Sutra. These vows
quintessence of this Sutra and are the basis of all Mahayana practice. Studying the vows an
practice is tantamount to studying the Avatamsaka Sutra and practicing its teachings. See a
"Samantabhadra."
Ten Precepts
Include an expanded version of the Five Precepts of body and mouth (not to kill, steal, enga
lie, or take intoxicants) with the addition of the virtues of the mind (elimination of greed, ange
delusion). See also "Five Precepts," "Ten Evil Acts."

Ten Stages of a Bodhisattva's Progress
They are the following: (1) Joy at having overcome former difficulties and at now entering t
Buddhahood; (2) Freedom from all possible defilement, the stage of purity; (3) The stage of
enlightenment; (4) Glowing wisdom; (5) Mastery of the utmost or final difficulties; (6) The op
wisdom that is beyond purity and impurity; (7) Proceeding afar, above the concept of "self"
others; (8) Attainment of calm imperturbability; (9) Achievement of the finest discriminatory
knowing, expediently, where and how to save; possessing the ten powers; (10) Attainment
powers of the Law Cloud.
Ten Virtues
The virtuous modes of behavior, which are the positive counterparts to the Five Precepts.
The Grades of Bodhisattva Faith
1) The stage of Bodhisattva faith; 2) The stage of rememberance or unforgetfulness; 3) The
progress; 4) The stage of wisdom; 5) The stage of Dhyana; 6) The stage of non-retrogressio
protection of the Dharma; 8)The stage of reflective powers; 9) The stage of discipline (sila);
of the mind of high resolve.
The Stages Before Attainment

1) The purposive stage; 2) The stage of control of the mind-ground; 3) the stage of Bodhisat
The stage of noble birth; 5) The stage of all-in-readiness for Enlightenment; 6) The stage of
becoming Buddha-like; 7) The stage of non-retrogression; 8) The stage of Bodhi in its infanc
the heir to the King of the Law; 10) The stage of investiture.

Theravada

Lit., the School of the Elders; one of the two main forms of Buddhism known in the world tod
chiefly in south-east Asia; has the Pali Canon for textual foundation; this tradition advocates
Arahantship.

Third Lifetime

In the first lifetime, the practitioner engages in mundane good deeds which bring ephemeral
(wealth, power, authority, etc.) in the second lifetime. Since power tends to corrupt, he is like
evil karma, resulting in retribution in the third lifetime. Thus, good deeds in the first lifetime a
potential "enemies" of the third lifetime. To ensure that mundane good deeds do not become
practitioner should dedicate all merits to a transcendental goal, i.e., to become Bodhisattvas
in Pure Land teaching, to achieve rebirth in the Pure Land -- a Buddha land beyond Birth an
In a mundane context, these three lifetimes can be conceived of as three generations. Thus
prominent family, through work and luck, amasses great power, fortune and influence (first li
children are then able to enjoy a leisurely, and, too often, dissipated life (second lifetime). By
generation of the grandchildren, the family's fortune and good reputation have all but disapp
lifetime).

Thirty-seven Limbs of Enlightenment

These are: a. the four mindfulnesses; b. the four right efforts; c. the four bases of miraculous
the five roots; e. the five powers; f. the seven factors of enlightenment; and g. the eightfold r
(G.C.C. Chang).

Thirty-two Laksanas

The physical marks of a Cakravarti (Wheel-King), especially of the Buddha.

Three bodies of the Buddha (Skt. trikaya)

1. Dharmakaya: The Dharma-body, or the "body of reality", which is formless, unchanging, t
inconceivable. Synonymous with suchness, or emptiness.

2. Sambhogakaya: the "body of enjoyment", the celestial body of the Buddha. Personificatio
perfection in its ultimate sense. It "resides" in the Pure Land and never manifests itself in the
world, but only in the celestial spheres, accompanied by enlightened Bodhisattvas.

3. Nirmanakaya: the "incarnated body" of the Buddha. In order to benefit certain sentient bei
incarnates himself into an appropriate visible body, such as that of Sakyamuni Buddha.

The incarnated body of the Buddha should not be confused with a magically produced Budd
real, tangible human body which has a definite life span, The latter is an illusory Buddha-form
produced with miraculous powers and can be withdrawn with miraculous powers (G.C.C. Ch

Three Evil Paths

See "Evil Paths."
Three Jewels (Three Precious Ones, Three Treasures)
In Sanskrit, Rathatraya. Buddha, Dharma and Sangha; sometimes referred to as the Teache
Taught.
Three Karmas
The three conditions, inheritances or karmas, of which there are several groups, including th
deeds, words and thoughts.
Three Poisons
Craving, aversion and delusion; also, these are termed the three root-stains or the three roo
unskillfulness.
Three Pure Land Sutras

Pure Land Buddhism is based on three basic sutras:
a) Amitabha Sutra (or Shorter Amitabha Sutra, or Smaller Sukhavati-Vyuha, or the Sutra of A
b) Longer Amitabha Sutra (or Longer Sukhavati-Vyuha, or the Teaching of Infinite Life);
c) Meditation Sutra (or the Meditation on the Buddha of Infinite Life, or the Amitayus Dhyana
Sometimes the last chapter of the Avatamsaka Sutra ("The Practices and Vows of the Bodh
is considered the fourth basic sutra of the Pure Land tradition. Note: in Pure Land, the Longe
is considered a shorter form of the Lotus Sutra.
Three Realms (Triple Realm, Three Worlds)
The realms of desire (our world), form (realms of the lesser deities) and formlessness (realm
deities). The Western Pure Land is outside the Triple Realm, beyond samsara and retrogres
Land."
Three Refuges
Taking refuge and possessing confidence in the Buddha's Awakening, in his Teaching and i
enlightened disciples.
Three Vehicles
The yanas of Sravakas, Pratyekabuddhas and Bodhisattvas.
T'ien T'ai (Tendai) School
A major school that takes the Lotus Sutra as its principal text. Historically, it has had a close
with Pure Land. See also "Lotus Sutra."
Tolerance of Non-Birth
"Tolerance" (insight) that comes from the knowledge that all phenomena are unborn. Somet
"insight into the non-origination of all existence/non-origination of the dharmas."
A Mahayana Buddhist term for the insight into emptiness, the non-origination or birthlessnes
beings realized by Bodhisattvas who have attained the eighth Stage [Ground] of the path to
Bodhisattva realizes this insight he has attained the stage of non-retrogression. (Ryukoku U
The Pure Land School teaches that anyone reborn in the Pure Land attains the Tolerance o

reaches the stage of non-retrogression, never to fall back into samsara. See also "Non-Birth

Transference of Merit

The concept of merit transference, or sharing one's own merits and virtues with others, is re
following passage:

Some of us may ask whether the effect of [evil] karma can be... [changed] by repeating the r
This question is tied up with that of rebirth in Sukhavati [the Pure Land] and it may be answe
that invocation of Kuan-Yin's name forms another cause which will right away offset the prev
know, for example) that if there is a dark, heavy cloud above, the chances are that it will rain
know that if a strong wind should blow, the cloud will be carried away somewhere else and v
rain. Similarly, the addition of one big factor can alter the whole course of karma

It is only by accepting the idea of life as one whole that both Theravadins and Mahayanists c
practice of transference of merit to others. With the case of Kuan-Yin then, by calling on Her
identify ourselves with Her and as a result of this identification, Her merits flow over to us. Th
which are now ours then counterbalance our bad karma and save us from calamity. The law
still stands good. All that has happened is that a powerful and immensely good karma has o
weaker one. (Lecture on Kuan-Yin by Tech Eng Soon - Penang Buddhist Association, c. 196

Triloka or Trailoka

See "Threee Realms."

Tripitaka

Lit., three baskets: The earliest Buddhist canonical text consisting of three sections: 1. Budd
(sutras), 2 Rules of Discipline (Vinaya), 3. Analytical and explanatory texts or commentaries
usually referred to as the Pali canon.

Triple Jewel

See "Three Treasures."

Twelve Nidanas

The twelve links in the chain of existence or causation; they are as follows: 1) Avidya, ignora
unenlightenment; 2) Samskara, action, activity, conception, "dispositions"; 3) Vijnana, consc
Namarupa, name and form; 5) Sadayatana, the six sense organs, i.e., eye, ear, nose, tongu
Sparsa, contact, touch; 7) Vedana, sensation, feeling; 8) Trsna, thirst, desire, existing; 9) Up
hold of, grasping; 10) Bhava, being, existing; 11) Jati, birth; 12) Jaramarana, old age and de

Two Truths

1) Relative or conventional, everyday truth of the mundane world subject to delusion and dic
the Ultimate Truth, transcending dichotomies, as taught by the Buddhas.

According to Buddhism, there are two kinds of Truth, the Absolute and the Relative. The Abs
Void) manifests "illumination but is always still," and this is absolutely inexplicable. On the ot
the Relative Truth (of the Unreal) manifests "stillness but is always illuminating," which mean
immanent in everything. (Hsu Heng Chi/P.H. Wei).

Pure Land thinkers such as the Patriarch Tao Ch'o accepted "the legitimacy of Conventiona

expression of Ultimate Truth and as a vehicle to reach Ultimate Truth. Even though all form acceptable and necessary to use form within the limits of causality, because its use is an ex saving others out of one's compassion for them and because, even for the unenlightened, th lead to the revelation of form as nonform" (David Chappell). Thus to reach Buddhahood, wh cultivator can practice the Pure Land method based on form.

Tzung

A term originally used to mean "sect", but later appropriated by the intuitional school known (Japanese, Zen) for use in special contexts.

U

Unconditioned (Transcendental)

Anything "without outflows," i.e., free of the three marks of greed, anger and delusion. See a "Conditioned."

Upasaka/Upasika

Buddhist lay disciple (man/woman), who formally received five precepts or rules of conduct.

V

Vaidehi

The Queen of King Bimbisara of Magadha, India. It was in response to her entreaties that Bu preached the Meditation Sutra, which teaches a series of sixteen visualizations (of Amitabha Land ...) leading to rebirth. in the Land of Ultimate Bliss.

Vaidurya

A precious substance, perhaps lapis lazuli or beryl.

Vairocana

The main Buddha in the Avatamsaka Sutra. Represents the Dharma Body of Buddha Shaky Pure Land is the Flower Store World, i.e., the entire cosmos.

Vaisravana

One of the four maharaja-deva graudians of the first or lowest devaloka on its four sides. Va the north.

Vaisya

The third of the four Hindi Castes at the time of Shakyamuni. They were merchant, entrepre farmers, manufacturers, etc., but not well-educated.

Varuna

God of the sea and of the waters; guardian of the western quarter of the compass.

Veda

True or sacred knowledge or lore; name of celebrated works which constitute the basis of th

the Hindu religion.

Vimalakirti Sutra

Also called Vimalakirti Nirdesa Sutra. A key Mahayana sutra particularly popular with Zen ar extent Pure Land followers. The main protagonist is a layman named Vimalakirti who is the Bodhisattvas in wisdom, eloquence, etc. He explained the teaching of Emptiness in terms of "The true nature of things is beyond the limiting concepts imposed by words." Thus, when as define the non-dual Truth, Vimalakirti simply remained silent.

Vinaya

Disciplined conduct, referring specifically to the monastic rules for the disciples who have lef one of the three divisions of the Buddhist scriptures.

Vipasyana

Discernment; also, insight, correct perception or view.

Virtue

See "Merit and Virtue."

Virya: Energy

The energy necessary to maintain and progress in spiritual development. Also, one of the Pa

Visualization

See Meditation Sutra for explanation.

The visualizations [in the Meditation Sutra] are distinguished into sixteen kinds [shifting from scenes to Pure Land scenes at the third Visualization]: (1) visualization of the sun, (2) visual water, (3) visualization of the ground [in the Pure Land], (4) visualization of the trees, (5) visu of the lake[s], (6) unified visualization of the [50 billion] storied-pavilions, trees, lakes, an forth, (7) visualization of the [lotus throne of Amitabha Buddha], (8) visualization of the imag Buddha [Amitabha] and Bodhisattvas [Avalokitesvara and Mahasthamaprapta], (9) visualiza body of Amitabha Buddha, i.e., the form in which He appears in the Pure Land], (10) visualiz Avalokitesvara, (11) visualization of Mahasthamaprapta, (12) visualization of one's own rebi below], (14) visualization of the rebirth of the highest grades, (15) visualization of the rebirth middle grades and (16) visualization of the rebirth of the lowest grades. (K.K. Tanaka, The D Pure Land Doctrine.)

The 13th Visualization has been summarized as follows:

If one cannot visualize the [Reward body of Amitabha Buddha], focus on the small body, wh high (the traditional height of Shakyamuni while he dwelt on earth); contemplate an intermin [Reward] and small bodies. (1oji Okazaki, p.52.)

Visualizations 14-16 refer to the nine lotus grades (of rebirth), divided into three sets of three each.

W

Way (Path, Tao)
The path leading to Supreme Enlightenment, to Buddhahood.
Wisdom-life
The life of a Buddha or Bodhisattva, which is sustained by wisdom, just as the life of an ordi
sustained by food.

X

Y

Yama
In the Vedas, the god of the dead.
Yana
Sankrit term, commonly translated as vehicle; means spiritual vehicle, path or career.
Yasodhara
The wife of Siddhartha Goutama. Later became a nun.
Yogacara School.
Another name for the Mind-Only school, founded in the fourth century by the brothers Asang

Z

Zen.
A major school of Mahayana Buddhism, with several branches. One of its most popular tech
on koans, which leads to the generation of the Great Doubt. According to this method:
The master gives the student a koan to think about, resolve, and then report back on to the
Concentration intensifies as the student first tries to solve the koan intellectually. This initial
proves impossible, however, for a koan cannot be solved rationally. Indeed, it is a kind of sp
intellect. Concentration and irrationality -- these two elements constitute the characteristic ps
situation that engulfs the student wrestling with a koan. As this persistent effort to concentra
intellectually becomes unbearable, anxiety sets in. The entirety of one's consciousness and
now filled with one thought. The exertion of the search is like wrestling with a deadly enemy
make one's way through a ring of flames. Such assaults on the fortress of human reason ine
a distrust of all rational perception. This gnawing doubt [Great Doubt], combined with a futil
way out, creates a state of extreme and intense yearning for deliverance. The state may per
weeks or even years; eventually the tension has to break. (Dumoulin, Zen Buddhism, Vol. I,

Cherry Pie (The deal requires a slice of her pie)
byvelvetpie©

The funeral was over and I had had enough of Aunt Enid's preaching so I left my grandmoth into downtown Lexington. The evening traffic had ended and I found myself trolling the back childhood, remembering the old haunts that I'd visited when I was last here.

I'd had such a good time growing up in Kentucky. We were poor but we always found some cousin, Laurie, and I were especially close, being the same age and graduating the same ye school that we both had the bad luck to attend. We laughed through most of the ceremony, to the after parties together, having possibly the best times of our lives.

Laurie did not attend the funeral and I headed over to the last address I had for her, astounc strange woman at her door.

"Does Laurie Metcalf live here?"

"Yes."

Her clear green eyes scoured me and I felt naked under her scrutiny. "Uh, can I talk to her?"

"Who are you?"

"Her cousin! Who the hell are you?"

"Look, I don't know who the hell you are and I'm not letting anyone else hurt her ... "

"Gina!"

The shout from behind the door caused the handsome woman to shut up and she stepped c opened and my cousin stood there, her eyes widening at the sight of me. "Gary!" We hugge Gina a mean glance, then closed my eyes and pressed my cousin's ripe body against mine. were here."

I stepped back, looking at her. "Why didn't you come to the funeral?"

"You know why. You know those stupid people." She let me in, standing next to Gina. "Gary Gina. Gina, this is my brother, Gary."

"I thought you said you were an only child." Gina said but Laurie smiled at me.

"Gary and I are legally cousins but we feel like we're brothers." She sneezed and we both st

"She has a cold." Gina said, pushing her toward the bedroom. "She won't go to bed."

"Laurie, you need to go to bed." I helped Gina steer her into the bedroom. Gina shook her he
me.

"You know her well, eh?"

"We grew up together." I spoke a little louder so Laurie could hear my words. "And I know th
when she gets sick."

"Gary ... "

"You don't have anything to say, Laurie. He knows you better than I do."

I looked across the bed at Gina and grinned. "I don't know about better ... " Her cheeks flam
finished tucking Laurie into the bed, pinching her cheek as our grandmother used to do to us
I expect you to go to Grammy's grave with me tomorrow."

Laurie sniffled, pulling the covers up around her. "Do I have to?"

"Did Grammy love you?"

"Yes."

"And did you love Grammy?"

"Yes."

"Then you know that you have to go see Grammy."

My cousin started sobbing and Gina hugged her while I looked on, rubbing both of their bach
fallen asleep. We quietly left the room and Gina went into the kitchen, gathering glasses into
rinsing them.

"You know, she wanted to go." Gina began. "But your Aunt Enid told her that she couldn't br

"Doesn't surprise me." I sat at the island, noticing the graceful swell of her breasts and the s
in her long legs. "Our family's pretty much fucked up but Grammy was always cool."

"Yeah, I know." Gina smiled warmly. "We visited her in the hospital just before she died. Eni

I returned her smile. "Guess you lucked out."

Gina didn't reply immediately, then turned to me. "Want a piece of cherry pie? I made it mys

I was really ready to leave but I couldn't turn down a piece of homemade cherry pie. "Okay."

I wasn't really paying attention as I slugged down the beer that Gina gave me. When she ca
amazed at what I saw. Gina was naked, her beautiful body open to my scrutiny and a slice o
artfully placed at her crotch. "Laurie told me about you two fucking. I just hoped that you'd in
the festivities."

I thought for a moment, temporarily upset at the fact that Laurie had revealed our secret to s
understanding enough to realize that she cared that much about Gina. "Gina ... "

"I thought you'd need some time to get used to it so I'm just asking for you to have a little pie
her legs farther open, looking at me with a smile. "Please?"

I couldn't really think. I leaned between her legs and took a big of the cherry pie, pushing my
her pussy lips. She moaned and I repeated the action, each time clearing a little more pie ar
her pussy. I continued to press my tongue into her cherry slit, enjoying the thick red juice an
with her clear pussy juice. Gina was tasty and I loved every bit of her, sucking, licking and cl
the only piece remaining was a tiny scrap of crust and one glistening cherry.

Gina leaned back, raising the hood on her mound and giving me a wink. I dove. Cherry and
my lips and my tongue wrapped around her clit, catapulting her into the stratosphere. Her cu
sweet cherry juice and I stood up, licking my lips.

"Pretty good." Gina slid down, her legs still trembling. "Shall we have it a la mode?"

Civilized Shamans: Buddhism in Tibetan Societies. (book reviews)Civilized Shamans: Buddhism in Tibetan Societies

Reviewrd by Cathy Cantwell

MAN
Vol.29 No.3
Sep 1994
Pp.776-777
Copyrighy by Royal Anthropological Institute

Samuel, Geoffrey. x, 725 pp., bibliogr. Washington, London: Smithsonian Institution Press, 1993. 51.50[pounds]

Civilized shamans is the first major comparative study of the Tibetan-speaking peoples written by an anthropologist. Earlier Tibetologists -- such as Tucci, Stein, Snellgrove and Richardson -- wrote general books on Tibetan society which remain useful introductions, although today their content and analysis appear dated. Since these pioneers, most Tibetologists have contributed more academically rigorous specialized studies. Because of the Chinese occupation of Tibet, anthropologists have usually worked with Tibetan refugees -- some producing reconstructions of communities within Tibet -- or in areas outside the modern boundaries of the People's Republic of China, such as Nepal, Bhutan and Ladakh. The problem of assessing their work on relatively marginal communities and understanding the general features of pre-modern Tibet remains. In this encyclopaedic book, Samuel draws together the work of Tibetologists of different disciplines, to analyse the patterns structuring the great variety of specific social, political and religious forms throughout the Tibetan-speaking region. He argues that concentration on the formal features of the political hierarchy of Central Tibet prior to 1959 has distorted our understanding of Tibetan society, when even Central Tibet was in practice fairly decentralized, especially

before this century.
Much of the first part of the book is made up of extremely useful succinct ethnographics of different Tibetan areas, drawing on the works of numerous anthropologists and other scholars who have written in European languages. He outlines the kinds of political organization associated with the various regions at different times, and relates them to his fourfold classification of Tibetan social structures: centralized and remote agricultural communities, pastoral and urban communities. He points out that the diversity of social systems over time and place can be seen in terms of variations on common themes, such as the institution of estates (gzhung), which were flexible enough to adapt to changing political realities.
In the second part of the book, Samuel explores the nature of Tibetan religion, discussing three approaches which may be said to characterize Buddhist societies: the `pragmatic', `karma' and `bodhi' orientations. He argues that the `karma orientation', which puts emphasis on a well disciplined monastic sangha, ethical conduct and gradual training, has tended to be dominant in Theravada Buddhist countries, with the `pragmatic orientation' relegated to the sphere of non-Buddhist practice, performed by low-status religious specialists, and the `bodhi orientation', which is concerned with the realization of Enlightenment, relatively marginalized, confined to groups of forest ascetics. In Tibet, however, all three orientations are integrated in Buddhist practice and in the same religious specialists, and the karma orientation' is rarely dominant. Samuel stresses the variety and fluidity of religious roles, practices and institutions. He relates the difference between Tibet and other Buddhist societies to the weakness of the State in Tibet: it never succeeded in controlling Buddhist monasteries and their lamas, or making the religious system completely `clerical'.
Part 3 is an account of historical developments in the religious ideas and practices in the Tibetan cultural world. Samuel links the complex combinations of religious trends in India prior to the importation of Buddhism to Tibet, and throughout Tibetan history, to social and political changes. The final chapters examine the two major cultural streams of the later period: the dGe-lugs-pa order

and the Ris-med movement. The dGe-lugs-pa became politically dominant and especially from the late nineteenth century, moved towards a more centralized state structure in the political sphere, a more hierarchical monastic order and a relatively dogmatic and graduated religious path. The Ris-med -- non-sectarian -- movement emerged in Eastern Tibet in areas under threat from the expansion of the Central Tibetan State, and remains a major influence on contemporary Tibetan Buddhism. It emphasized the primacy of tantric meditative insights and the numerous routes to Enlightenment. While the dGe-lugs-pa graded and excluded teachings, Ris-med gathered together and transmitted teachings of all the lineages, including those of the non-buddhist Bon-pos and minor Buddhist lineages which may otherwise have been lost. The contrast is one of emphasis: the dGe-lugs-pa were never entirely rationalized', while the non-dGe-luge-pa orders maintained monastic colleges and scholastic traditions.

The book uses the theoretical perspective Samuel outlined in Mind, body and culture: anthropology and the biological interface (Cambridge Univ. Press, 1990). The concluding chapter summarizes this approach, which essentially assumes that political, economic, social, religious and cultural developments are inseparable processes. He acknowledges a debt to Weberian sociology, while arguing that primacy should not he given to the political and economic spheres.

Civilized shamans is a clear, readable account integrating research on Tibet in terms of Samuel's theme of the synthesis of `clerical' and `shamanic' cultural patterns, in this unusual society in which a complex literate culture maintained `shamanic' insights and procedures as its highest achievement.

There are some problems with the system used for transcribing Tibetan: the elimination of hyphens or spaces means that words such as roue snyom become `ronyom' rather than `roue-nyom' and the appropriate pronunciation might be less clear to a non-tibetanist than the use of correct spelling, which would have been preferable for the specialist.

[from the back cover]:

Notes

Introduction

On the morning of October 5, 1989, history intruded unexpectedly into a private meeting bet
the XIVth Dalai Lama of Tibet and a small group of neuroscientists and psychiatrists. Leade
they had come together to explore what insights the Western sciences of the mind and Budd
each other. The second Mind and Life Conference was gathered at the Newport Beach hom
Clifford Heinz, when a predawn phone call from Oslo announced that His Holiness had been
Prize for Peace.

Considering how public awareness of the situation in Tibet has grown in the West in rece
easy to forget how significant the Dalai Lama's Nobel Prize was at the time. After decades o
neglect, the award was an important turning point for the Tibetan cause, recognizing the Tib
struggle against Chinese oppression as well as the Dalai Lama's commitment to a nonviole
continuing conflict.

Shortly after the first phone call, other calls began coming in from the television networks
o'clock, His Holiness had made the decision to continue with the conference as scheduled, a
the group convened. By the time His Holiness entered the living room, which had been rear
conference, and took his seat in the circle, an extraordinary sense of joy and excitement had
house. Robert Livingston, the scientific coordinator, spoke a few warm words of congratulati
responded to the effect that the prize should not be considered as a recognition of any perso
his own, but was important as a recognition of the path of nonviolence he followed.

Even those closest to him, who well knew the Dalai Lamas characteristic humility, were s
nonchalance that day, and the more so for their own excitement. Those who were meeting h
first time were profoundly struck by his equanimity at receiving this highest honor of humanit

The Dalai Lama's decision to proceed with the conference as planned that day is evidence o
these dialogues hold for him. The first Mind and Life Conference had met two years earlier,

The meetings were initiated jointly by Adam Engle, a U.S. attorney and businessman, and D
a neurobiologist at the National Center for Scientific Research, in Paris, in response to His H
lifelong interest in the sciences, and a growing awareness of the potential for a serious dialo
Buddhism and Western science.

The conferences would meet every two years, usually in the remote but idyllic setting of t
home in Dharamsala, India, for five full days each time. The first conference had provided a
the mind sciences, with presentations on scientific method, perception, cognitive psychology
intelligence, developmental neurobiology, and evolution. In years to come, the third and four
would continue the emphasis on mind sciences, focusing first on the effect of emotions on h
sleep, dreaming, and dying. The fifth conference in 1995 moved further afield, into the study
altruism, and ethics. Most recently, in 1997, the dialogue has moved in a new direction, addr
physics, cosmology, and quantum mechanics.

The second conference, reported here, was unusual among the series in that it was only
took place in the West, in Newport Beach, California. Dr. Robert Livingston, M.D., Professor
Neurosciences at the University of California, San Diego, who had been invited to participate
Mind and Life dialogue two years before, took on the responsibility of being the scientific coo
this conference. The colleagues he selected to represent their fields were outstanding indivi
formidable as a group.

Patricia Smith Churchland, Ph.D., Professor of Philosophy at the University of California
set the context of the dialogue in the philosophical and historical origins of Western sciences
Antonio R. Damasio, M.D., Professor of Neurology at the University of Iowa College of Medi
findings on the relationship between the anatomy of the brain and mental functions. Larry R.
Professor of Psychiatry at the University of California at San Diego, introduced the science o
Allan Hobson, M.D., Professor of Psychiatry at Harvard Medical School, provided an overvie
knowledge on sleep and dream states. And Lewis L. Judd, M.D., then Director of the Nation
Mental Health, outlined current views on mental illness and psychopharmacology. Translatio
Thubten Jinpa and B. Alan Wallace.

The format of the Mind and Life Conferences consists of formal presentations from each of t
scientists and philosophers, alternating with open-ended discussion. In the context of this di
scientists are committed to representing consensus in their respective fields, as this is not se
appropriate forum for airing controversial material or furthering debate within the academy.

The presentations are interrupted often, as the Dalai Lama asks a question or offers an i
response to a point. The discussion is often sparked by the preceding presentation, but may
from previous conversations. In the account that follows, portions of dialogue from different s
grouped together, tracing themes that developed gradually over the course of the meeting.

Throughout the meetings, His Holiness listens intently to each speaker, following most of
though occasionally turning to the translators to ask for clarification. In his own responses, h

speaks through the translators when dealing with Buddhist philosophy or scientific concepts breaks into English to communicate ideas that are less technical-to express his feelings, to r to describe his own experiences-and these are moments of special warmth.

In preparing the text of this book, the contributions of the translators, Thubten Jinpa and A have been rendered transparent, except on rare occasions as they voice their own concerns communication in process. Thus, when His Holiness speaks through a translator, the speech his own.

In addition to his role as a translator, Alan Wallace has contributed significantly to the sha book by adding commentary to clarify the Buddhist viewpoint on issues that were raised at th well elucidated at the time. We hope that the value of this commentary, especially as it touch that are easily misconstrued in the cross-cultural dialogue, will outweigh the dangers of allow the debate to add a last word after the meeting has ended. But of course, the dialogue betw Western science continues, and this book is only a snapshot of one particularly lively mome discourse.

---Zara Houshmand

1. Opening Remarks: Brain Science as a Path to World Peace

Robert Livingston opened the morning session on the first day of the conference by voicing at the news, just announced, that the Dalai Lama had been awarded the Nobel Peace Prize scientific coordinator, Dr. Livingston articulated his personal vision of the purpose of the dial better understanding of the brains complexity and adaptability, and of the resulting diversity consciousness, is critical to global human survival. In the light of the Nobel Prize announcem carried a profound sense of the responsibility of each of the participants gathered in that roo face-to-face engagement of Western science with the Buddhist tradition of enquiry into cons well have deep ramifications for world peace.

ROBERT LIVINGSTON: This initiates the second dialogue between Western neurosciences These two radically different ways of looking at mind and life have existed, mostly apart, ove about 2,500 years. They have been following such separate paths that there has been almo cross-communication. So for all of us this is a significant opportunity. We anticipate that the dialogues will improve and increase communications and strengthen ties in terms of mutual neurosciences, consciousness, brain, mind, and the like, and also add new insights into hun believe can contribute to world peace.

There are indeed two great fundamentals underlying this dialogue. First, the issues up fo here are not only of great importance in each individual human life, but their comprehension may indeed be pivotal for human survival on a global scale. Such issues relate to individual differences in perception, judgment, behavior, and communication. And second, the human

resourceful instrument for survival. It has always been obliged to be-and continues to be-con
adaptive. Yet its full potential will not be realized until the brain is better understood, particula
terms of its individuality and the consequent diversity of world views.

The brain is constructively adaptive in the sense that it is continually self-actuating and self-organizing with respect to its own body, and its projection and testing of images and ma world. According to its own timetable, it changes its internal states and partitions its activities and in a comprehensively integrated way.

There is a prior, slower brain dynamic in evolution, shaped by selective forces acting ove long periods of time. In all history, the most abrupt response to selection forces affecting bra was the approximately threefold volumetric expansion of the hominid brain, which began ab years ago with a common ancestor from which we diverged from present-day chimpanzees. human lifetimes, the brain is dynamic, too, in its embryonic, fetal, and childhood developmen remarkable adaptation to a given environment and culture, and its diminishing powers assoc and aging.

These evolutionary and life-span changes are structurally dynamic at gross, microscopic, ultrastructural levels of neuroanatomy. Changes in ultrastructure-at the level of electron micr occurring dynamically even as we think, talk, behave, and remember events. Changes at mi organization take place at a slower rate in accordance with our use or desuetude of particula conscious and unconscious experiences. Brain states arise from neuronal activity that involv bioelectrical and biochemical events, and that can change the ultrastructural features of the architectures of cellular neighborhoods.

Very importantly, the brain is dynamic in an integrative sense. Whenever we examine so drugged, diseased, or damaged brain, we observe what that particular brain can do as a wh enduring damage may have occurred, and despite whatever transient interferences may be words, the brain as a whole tends to do the best it can by integrating all of its resources that available.

The brain is likewise dynamic in a personal, subjective, interactive sense, which I should illustrate for you now. For this purpose, I invite your participation so that your Holiness can f consciously on some subjective experiences as they take place within your own brain.

Tibetan people have undoubtedly gazed at waterfalls often and for prolonged periods. W at a waterfall, steadily at one point in the falls, for at least a few minutes, and then looks awa wall of the mountain adjacent to the waterfall, something amazing happens perceptually. Sp of rock, in a width corresponding to the waterfall, now appears to move upwards and does s

This tells us that something dynamic has happened within particular brain circuits that pr perception. Some among them have become temporarily actively engaged in adapting their discriminative analysis to the problems of better perceiving swiftly falling water. We infer tha has gazed at the waterfall for a short while, the perceptual apparatus has adapted itself so a the motion of the falling water, perhaps to allow it to be more precisely observed. The evider

slowing down process, which is confined to a well-defined patch of the visual field centered
persists in dynamic fashion after one looks away, and operates to produce the reverse moti
objects perceived by that transiently adapted sector of the visual field.

You have probably noticed also on a sea voyage, that after much rolling and pitching mo
a similar sense of motion can persist for many hours after you go ashore. Or following flight
your hearing may be affected for some hours after landing. There are many other commonp
witnessing dynamic features of brain mechanisms. For example, when you have traveled ac
in an airplane, you have undoubtedly experienced jet lag. Your body, including your endocri
digestion, and sleep mechanisms, takes some days to recover normal rhythms while your b
your daylight cycle entrainment in accordance with the new time zone.

At this point, Dr. Livingston asked His Holiness to participate in an exercise to become cons
one's own brain during voluntary performance. He demonstrated by spreading and closing h
fanlike motion, and asked the Dalai Lama to copy this action.

When you do this, you are first of all politely acceding to my request that you do so. Ther
engaging in voluntary, deliberately willed actions. This involves certain parts of your motor c
discrete and complicated pattern of electrochemical activity. You can subjectively recognize
generated by your intentions, your initiatives, and the corresponding perceptual experiences
your fingers, hands, and vision, to inform you that you have performed the actions more or l
Dr. Livingston then took the Dalai Lama's hand in his own, holding his fingers together.

If I restrain your fingers so that your voluntary actions are gently prevented, and ask you
nevertheless continue spreading your fingers in the same way, you can immediately apprec
required by having to make extra brain efforts, or willpower, as well as extra muscular effort

DALAI LAMA: So what is the meaning of this?

ROBERT LIVINGSTON: Using Western neuroscientific techniques we could obtain simultan
subjective evidence that many specific parts of your brain were performing certain orderly, y
complicated, operations: responding to my request, deciding whether to comply, executing p
performances, doing so against resistance, and so forth. Altogether a fantastically large num
distinctive parts of your brain were involved in these activities-auditory, visual, visceromotor,
somesthetic, etcetera-and individual body parts have been commanded discretely, differenti
exquisite sequential precision. In short, for this simple performance, there has been a specta
orchestration of activities among many discrete parts of your brain. I venture to say that at le
dozen billion nerve cells and numerous scores of trillions of electrochemical signals were ac
course of this modest exercise. These brain events involved near and remote circuits and m
cortical and subcortical cellular constellations, all of which were harmoniously integrated.

We take this entirely for granted, but it is nonetheless quite astonishing to consider. I sug
need to engage in this kind of thinking in order to gain an inkling of the complexities and fine
brain processes, and to hold the brain's potentialities in sufficient awe. These are the kinds o
considerations that bring Western neuroscientists to determine experimentally how detailed

occur during perception, judgment, and behavior. How are such detailed brain events chann bodies, to produce sentences, to generate ideas, experience, and manifest emotions? What central brain command, and, more broadly, how do dynamic changes of brain state take pla wakefulness, or between sleep, deep sleep, and dreaming sleep? How are these changes o controlled? More broadly still, what is the role of consciousness in such activities?

These are the kinds of questions we would like to open for free discussion with you in this pay our respects to two cultural traditions which have been separated for so very long and n opportunity for exchange by virtue of your curiosity, initiative, and generosity. This opens for neuroscientists an excellent opportunity for professional enrichment because Buddhists hav about consciousness, mind, and body for a very long time along different conceptual paths. our own humility and naivete: there are many things that we don't yet know about the brain a many about which we are unsure, and others still about which we remain unknowingly in err

We shall attempt to represent Western neurosciences in a fair way. We can then become helping insofar as possible to increase mutual understanding in both directions, and to disso have too long separated these two insight-seeking cultures.

In the process, it should be possible to devise innovative experimental strategies directed objectifying phenomena studied according to both traditions.

Many fundamental concepts are swiftly changing in Western neurosciences' views relatin mechanisms. So we must stay tuned in order to move together within this tumbling stream o innovation.

One of the fundamentals underlying these dialogues is our mutual concern for world pea believe that several pertinent disciplines from both traditions are of great importance for hum in the development of more rational human self-knowledge, cross-cultural mutual understan all urgently needed to safeguard this planetary habitat and to ensure equitable sharing of its

2. Toward a Natural Science of the Mind -- Patricia Smith Churchland, Ph.D.

As a general rule, each Mind and Life Conference opens with a presentation, often from a p historian of science, that maps out some of the deep assumptions and cultural givens of the covered in the dialogue. These buried foundations of our intellectual constructs determine w legitimately belonging to the realm of science. This is, of course, vital information for anyone different tradition who seeks to understand Western science on its own terms. This is also th defend irrationally as well as rationally, and where we need to work hardest to open our min engage seriously with a very different world view.

Patricia Churchland's presentation explores the roots of modern Western understanding between the mind and the brain. She traces the history of modern science back to its origins philosophy. The investigations of philosophers such as Aristotle and Plato into the nature of

and of human perception and conceptual representation of that universe, created templates
powerful influence on our own thinking. She describes the Dualist position as formulated by
separation of body and mind, of physical and spiritual worlds, that has dominated Western t
centuries and remains current both in Western religions and in the popular imagination. In o
she defends the Materialist position that underlies most modern scientific thought. In this vie
exists other than the physical, and consciousness is understood as an emergent property of
organization of the brain.
PATRICIA CHURCHLAND: I think most scientists who work on the brain probably do feel, fi
is not independent of the brain; second, that memories are a function of the way the brain or
and third, that perception is dependent upon the way parts of the brain are organized and in
what I want to try to do is to ask the larger question about the relation of brain and mind.
DALAI LAMA: What do you mean by consciousness?
PATRICIA CHURCHLAND: I mean that we are aware of colors, smells, shapes, sounds, an
embarrassment. I don't mean that consciousness must be a thing. That's a question to be a

I wanted to sketch out how it came to be that many neuroscientists, and I, too, have beco
that the mind is not independent of the brain-that mind is, in fact, the brain understood as or
functioning in a certain way.

The Philosophical Roots of Science

I want to start with the ancient Greeks who formulated many concepts and ideas that hav
Western science. There are many scientific questions that originated in the Greek tradition i
philosophy. Aristotle and Plato were profoundly puzzled about the nature of space and time,
nature of substance. They wanted to know what matter is made of, how it is put together. Th
things change, and why they change, was also questioned. They noticed that certain things
systematically and other things change apparently at random. They wanted to know about t

Additionally, of course, they wanted to know about the origins of life, where it all came fro
asked particular questions about humans. They wanted to know how it is that humans can k
them according to some kind of internal representation. How is it that with just a head and e
is nonetheless possible to know what's going on outside in an immense and complicated wo
things exist independently of you in the world, and to know that sometimes how things seem
from how they in fact are. These are basic mysteries. They would use the example of your p
thrust a stick into water: the stick looks bent. That is how you perceive it to be, but some oth
your knowledge represents it as being, in fact, straight. They were intrigued by the fact that
distinguish between how things seem to be and how they actually turn out to be. They were
that we can think about things when they are not present. Thus, I can think about my childre
they are not here.

DALAI LAMA: This is a function of the conceptual mind, to create the imagery correspondin
event.
PATRICIA CHURCHLAND: But how this is done by the mind/brain is the question. The Gree
perceptual experience has a kind of unity. They realized that we see shapes and colors as p
such as a tree. There is also unity across different sense modalities. One can see and hear,
both senses arise from the same object. One can see the lyre being played and hear the so
that it is part of one thing.

There is also a unity through time. Thus, I know that I am the same person today that I w
that I was the day before. I can look at this room, scanning different areas of space at differe
yet it remains a unified room for me. It is not a bit here, a bit there, a bit elsewhere as my ey
is understood by me as belonging together, as a whole.

On Perception, Representation, and Conceptualization

DALAI LAMA: When you say represent, are you referring only to conceptual impressions, or
impressions such as visual and auditory perceptions-or do you mean both?
PATRICIA CHURCHLAND: I mean to cover both. Representations can be perceptual or con
sensory representation from touch, as well as from vision, hearing, and other sense modaliti
include memory representations that occur in the course of just thinking about things. We co
these brain processes as constituting representations.

When you think about what you are going to say next, and you frame it or mull it over in y
you are engaging a linguistic representation. But the critical point is that all of this is occurrin
brain.
DALAI LAMA: Is this function of representation common to all higher animals, at least the m
ones, or is it unique to human beings?
PATRICIA CHURCHLAND: Nobody really knows. But I would suspect that it is found in man
also in reptiles and fish.
DALAI LAMA: Do you believe that this is so for both sensory perception and conceptual facu
PATRICIA CHURCHLAND: Yes. But for very simple animals, and for us too, there are some
like reflexes. If touching an animal provides an input signal to its nervous system, and this is
required to generate a stereotyped response, no mediation beyond some relatively simple re
necessary. In a sense, a reflex reflects a very primitive representation. Or you might say, in
case, that there is little or no representation.
DALAI LAMA: Is there not even a sensory representation in that straight reflex situation?
PATRICIA CHURCHLAND: I don't have a decisive answer to that. It is probably not useful to
involving sensory representation. It can take place in the absence of consciousness.
ALLAN HOBSON: It is doubtful whether animals have conceptual representation. It is hard t

language how a concept can arise. I think most scientists would have grave doubts about th
ROBERT LIVINGSTON: Certainly animals have memories; they have a keen sense of spac
sense of loyalty.
ALLAN HOBSON: But are those concepts?
PATRICIA CHURCHLAND: It is hard to say in animals. There are of course anecdotes invol
appear to be looking for things that they expect to find in a certain place where they have ne
before. That would indicate that they have a representation.
DALAI LAMA: They do have memory. Isn't memory included in the conceptual faculties? Isn
conceptual process?
PATRICIA CHURCHLAND: There may be different kinds of memory. Some are conceptual a
habituation, are not. But let me say that the notion of representation is not precise.
ANTONIO DAMASIO: Perhaps it would be useful to think of representation as having many
are representations that can correspond to very objective things in the outside world, such a
representation of Pat, or of this table. There are other representations that do not relate to th
world as we perceive it, but are still representations in the sense that they exist in the brain i
of patterns of activity.

Thus, if you have a reflex, there is in fact a representation of some sort, which correspon
sequence of activities that neurons and their synapses perform in order for the reflex to hold
to respond characteristically, repeatedly. It is just that it is not a representation in the sense
picture, an image. But I think we can talk about it as a representation.

And on the issue of conceptualization in animals, I would say that although language ado
concepts, that animals, certainly animals such as a chimpanzee, do have concepts.
PATRICIA CHURCHLAND: Some of the questions that were of interest to the ancients had
space and time and substance, and so forth. As people began to construct hypotheses abou
as they began to test them experimentally, the questions began to shift into a different doma
part of what was established as very probably true, what we call "reality." Thus, very good th
about astronomy. It began to be known, certainly by the fifteenth century, that the earth was
center of the universe, though that disappointed many people. Galileo introduced theories o
through the work of Newton the nature of motion became well understood; and this was follo
century by an understanding of heat as molecular motion.

Questions about the nature of substance, what makes up stuff, and how one kind of stuff
another shifted over into the domain of chemistry, which likewise became a science, and so
Issues that used to belong to natural philosophy became part of natural science and were in
experimentally; hypotheses were tested and technology advanced.

Just as some of the other great questions became scientific as hypotheses and technolo
we also develop a natural science of the mind? This has now become an important contemp

Some scientific work has been done at the level of psychology. For example, we try to ch
capacity, such as the capacity for seeing in depth, in terms of behavioral responses. But of c

really want to know is, how is that possible? What is the mechanism for seeing in depth? We accurate depth perception can be; we know some of the scope and limits of that capacity, bu understand is: How does it work? How can something produce depth perception?

And similarly with memory: How is it possible that we can be exposed to something, and day later, or a year later, or ten years later? How does memory work?

Mind and Brain: One and the Same?

Now, within the considerations of Western philosophy, there is an assumption behind this qu we can develop a natural science of the mind, and we need to tackle that assumption first. T that we need to address has to do with whether mental states or the mind are identical to bra mental states, in fact, states of the physical brain, or are they something that can exist indep the brain? When I remember something, is that a state of my brain, organized and processin way? When I see something, is that a state of the physical brain, or is it a state of something

As you know, there is a deep division on this question. Some people will answer yes, and answer no. First, I want to look at the negative answer.

Descartes was a classic Dualist. His idea was that mental states and the brain are two ve kinds of thing. The brain, like the body, is a physical thing, which, as he put it, has extension and mass. The mind does not.

DALAI LAMA: In this view, is there an assertion of a self? Is the self equated with the mind t distinguished from the brain? Are they one and the same? Do the philosophers make the as Dualistic theory that the mind is a soul after all?

In this instance, the translator's choice of words moves the discussion into a realm that was the original query, but was fruitful nonetheless. The Tibetan term gang zag, translated as "so means "person" or "individual"; this does not carry the heavy religious and metaphysical con word "soul" as it is used in English.

PATRICIA CHURCHLAND: Yes, the soul, the spirit, the mind, are rather interchangeable ac Cartesian concept.

DALAI LAMA: But are they separate? Do they have separate identities? Do you distinguish t from the mind?

PATRICIA CHURCHLAND: I think from Descartes' point of view, one uses "the mind," "the s interchangeably.

DALAI LAMA: Is there a sense that the soul itself simply sees, or that the soul sees via perc awareness that is somehow distinct?

PATRICIA CHURCHLAND: I don't think it is supposed that the soul sees through anything. I that the soul sees, the soul is aware, the soul thinks, the soul reasons, by itself, though in re impact on the body.... Some people might think that there are parts to the soul. But basically

Dualist, you thought that the thing that did the thinking and feeling, the thing that was aware that was conscious, was the mind or soul.

ALLAN HOBSON: I think it is not just history but that most people believe this now.

PATRICIA CHURCHLAND: Eccles is a contemporary neuroscientist, a Nobel laureate, who Dualistic theory.

DALAI LAMA: Would you say that most people believe this, but that most scientists do not?

PATRICIA CHURCHLAND: Most neuroscientists and scientists generally do not hold this vie the only exception. I wanted to mention him to recognize that there are some very knowledg hold this view. I think a great many nonscientists, perhaps the vast majority of the populatior Dualistic lines.

ALLAN HOBSON: The essential linkage to what I understand Buddhist tenets to be is that c by Dualists to be able to exist apart from and in some degree independently from the brain.

A Materialist Critique of Dualism

PATRICIA CHURCHLAND: Remember our question: Are mental states really states of the p Materialists, also called Physicalists-these terms are interchangeable-would say yes. They h isn't any independent stuff, any kind of substance, any independent thing. There is just the b organized in ways that we don't yet really quite understand, that produces things like conscie and so forth.

I want to say a little bit about what would motivate someone to be a Materialist. I think it r motivation in the first place because feelings, such as sadness, for example, really do seem from, say, a piece of bone or flesh in your arm, or a piece of the brain in your head. Activity o the brain seems to be very different from having a feeling of sadness or happiness, or havin blue, and so on.

Even Descartes had contemporaries who said that die idea that there should be two very things (body and mind) is very problematic. They posed the great question as to how there c interactions between two such disparate and incommensurable things. How is it that a mind made of completely nonphysical stuff, can interact with something physical? How can it caus happen in the brain? If it is supposed to cause us to move, for example, what is the nature o transaction? That was what Descartes really struggled with. And he said that the transaction the pineal gland, a little gland in the middle of the brain which we now know has nothing to c functions.3 But Descartes liked the idea that the pineal gland was in the center of the head.

But even that didn't help with the question of what such a transaction would be like. He s fine, very subtle substance interacted with the physical substance. His critics, especially the priest, Father Malebranche, pointed out that that was not a satisfactory answer. To have a p there should be a measurable physical cause by this immaterial stuff. And they didn't see ho

happen.

The second argument of Descartes' critics was that reality can be very different from app know that substances can be made of elements that individually look one way, and behave combined, look and behave in different ways. We know the earth looks flat but turns out to b on. Critics argued that even though our experience seems to be very different from the beha cells, that doesn't mean they are different. Seeming to be different is not in fact evidence for actually being different. That was a criticism made in the seventeenth century that still persis

Amongst contemporary scientists, there is more than just negative criticism of Dualism. T positive reasons for believing that Dualism is probably false. One of the most important reas with the dependencies between psychological states and changes in brain states that we ca quantify. For example, by administering specific drugs, we can change a person's perceptio capacity to remember things. These observations suggest that there is a very close relations particular chemical substances, particular psychological states, and particular brain states. I relation between psychological states and brain states is probably one of identity.

Antonio Damasio and Larry Squire will both talk about brain lesions, where damage to ce brain interrupts or changes psychological functions, so that people are altered in what they c remember, what they experience and how they think. A lesion may change whether they ca they can see color, and so on. These changes seem to be very specific and to be related to brain structures. Once more, there is a structural/functional dependency that is very striking- that it does not appear necessary to postulate some other agency such as a nonphysical so as though the only thing necessary is this wonderfully complicated, dazzlingly organized bra example concerning mind/brain dependencies, consider electrical stimulation. With the brain patient undergoing brain surgery, the surgeon may need to test and identify certain brain str functionally, to map specific sensory or motor areas by eliciting corresponding responses to stimulation. Using fine electrodes and weak electrical current, localized parts of the brain ha explored in this way in many patients. This provides a very striking example of dependencie more exhaustively explored in animals, particularly in primate studies. When a particular par stimulated, the patient may find that they can't express certain words that they would like to may unexpectedly experience very specific memories that return to them from the remote pa old popular songs.

If there were a soul in there, you might wonder how the electrical current has these effec soul somehow intervene at the points of stimulation? It doesn't appear likely.

We also know about external and internal accidents affecting brain tissue, with localized disorganization and even generalized degeneration of brain tissue, which are associated wit variety of specific psychological effects. Once more, there is a remarkable correspondence b distribution of brain damage and the kind of disruption or degeneration of psychological func of perceptual, emotional, judgmental, and behavioral abilities. Loss of visual, language, or m are among the most instructive.

If it were the case that there is a consciousness independent of the brain, and which can brain at the time of death, then that consciousness is supposed to carry along with it memor person possessed. But when the brain deteriorates and memory correspondingly deteriorate brain degenerates long before death and the memory similarly declines beforehand, how do nevertheless retain memories intact? What is your explanation?4

Or suppose that a given brain didn't degenerate prior to death. If memories are encoded result of the way that selected neurons interact and change their shape and establish unique that be recorded, or conveyed to, or carried by the nonphysical soul or mind? How can elab ultrastructural physical changes upon which the memory depends, and precise kinds of stru the brain undergoes whenever we remember anything, relate to the nonphysical soul? How transferred into the soul so that, after death, the soul can retain those memories?

How might it work, say, in patients with brain degeneration, who can't remember where t what they did yesterday, or who their children are? Would the memories of things that they h years ago be preserved in the soul, but be unavailable now? That is implausible.

Each of these distinctive sorts of dependencies seems persuasive on its own, and they a compelling. Thus, the hypothesis that there is a soul-the Dualist hypothesis-is not probable. highly improbable.

None of these lines of evidence shows absolutely that Dualism is false. I don't think that show that for any sort of general supposition in science, or anywhere else, for that matter. B think, make Dualism virtually impossible.

The data base for all the several kinds of dependencies is very long and I have provided examples. I think another good example has to do with the structural defects and functional observe in brains as a result of genetic errors, or as the result of interference with developm who are born after a difficult delivery where the oxygen supply to the brain was cut off may h are very defective. You wouldn't expect that reduction in oxygen supply would bother a soul. would also do so in the course of ordinary dying.

Finally, there is the question as to how the idea of the mind or soul fits in with the rest of There again, I think, the Dualist hypothesis is not very compatible with the rest of establishe Admittedly, no one can be quite sure that established science is true, but it looks like the bes got so far, and like Buddhism, it is subject to correction in the light of evidence.

The Dualist hypothesis does not fit very well with evolutionary biology. You have a seque increasingly elaborate animal species, and then abruptly, lo and behold, humans appear. Ur previously, they possess a soul. This abrupt endowment is especially unlikely because there similarities in genetic material, brains, and behavior between nonhuman primates and huma correspondingly no abrupt discontinuities down the evolutionary ladder.

Finally, I would like to pick up on some of the criticisms that were leveled at Descartes. F hard to see what kind of thing a soul could be. If it does leave the body and brain to become independent, how does it maintain its integrity? How can it be one thing, presumably unparti

like a distributed fog that merges into other things? And if it has parts, such as a conscious p
nonconscious part, how do the parts interact? What are the nature of any divisions within the

If a mind is a state of the brain, then we might be able to say quite a lot about the differen
what it is when you are conscious and what it is when you are not conscious. But I don't thin
what those state change differences would be in the case of a mind or soul.

And similarly with respect to perception: Quite a lot of progress has been made by neuro
psychologists working together to understand perception in terms of the way the cells in the
interact, and so forth. There isn't any account of what the mechanisms or process would be
flow of consciousness or thoughts would proceed. If you do postulate the existence of a sou
great many explanatory difficulties. Moreover, there is no need to postulate a nonphysical m
from the brain, because we can account pretty well already for these phenomena in terms o
dynamic circuitry, electro-physiological properties, etcetera.

I will say one last thing, picking up on Bob Livingston's introduction. Within the last three
there has been spectacular, unanticipated, almost incredible progress made in the neuroscie
we are living at a very special time when psychological properties can find solid explanation
neurobiological properties.

It is not surprising that understanding about the mind/brain comes so recently, because i
brain is a highly technical affair that requires a great deal of specialized technology. When p
understand brains or minds before physics and chemistry, before evolutionary biology and m
before microscopes-including electron microscopes-before electronic computers, and magn
they could not get far. Until very recently we did not have either the theoretical foundations o
technical finesse required to investigate these extremely delicate yet comprehensively integ
Now things are really coming together, and although it is only a beginning, it is a very promis

The Technological Bias of Mind/ Brain Metaphors

Robert Livingston adds a coda to Patricia Churchland's presentation, pointing out how roote
fascination with technology, and thus culturally bound, are the various metaphors that scien
envision the relationship between mind and brain.

ROBERT LIVINGSTON: In a way, Your Holiness, models proposed to account for the corres
and consciousness on the one hand, and brain mechanisms on the other, historically have c
the contemporary technology. For example, Descartes accounted for this relationship by ana
systems popular then for making elaborate fountain displays, operating clockworks, and ani
hydraulic systems were invoked by him to explain nervous system functions in relation to the
nerves were hollow tubes containing fluid. He knew that they are arranged in an orderly fash
and centrally. They responded to stimulation by imparting motion to the fluid. Descartes thus
first comprehensive physiological explanation of the nervous system as an automaton. He p

nerves all terminated by opening into the brain ventricles. Their activation would project extr
effects, by means of fluid jets directed against the pineal gland. Thus, when a particular part
affected, such jets would ballotte the pineal delicately from that particular direction.

Descartes illustrated this with the picture of a young boy near a flame. The boy is looking
which is quite close to his foot. Descartes writes that the quickness of the fire transmits itself
and the nerves in the skin. And these pass by through the leg and spinal marrow, to the inm
brain, where they debouch into the cerebral ventricule. When nerves in the foot are activated
fine jet of fluid which strikes the pineal gland from a specific angle. By virtue of the orderly di
of nerves in the body and their debouchment into the ventricular pool, the fluid jet informs th
in the pineal gland that there is fire in the vicinity of the foot. This is accompanied by conscio
perception of heat, reflex withdrawal of the foot, and willed retreat. The pineal commanded r
behavioral responses by perturbing the ventricular chambers and hence the corresponding r
how it also controlled consciousness, sleep, and dreaming, by inflating and conflating the ve
Thus, Descartes understood reflexes and gave them that name by analogy with the geometr
reflection of light from a surface.

In more modern times, it was traditional to speak of brain mechanisms as if they were sim
telegraph, then later as telephone systems with switchboards, and now the computer. As yo
Greenleaf in the first Mind and Life Conference, computer scientists and cognitive scientists
using various configurations of solid state physical systems (euphemistically called "neurons
decision-making machines, language-interpreting machines, and so on. This gives people a
feeling that they are making progress in understanding the brain.

But I think Western neuroscientists are inclined to believe that there is no model that is e
appropriate, as yet, for the brain. Living cells possess awe-inspiring capabilities: extremely fi
that are dynamic and responsive to their near and remote environments with very complicat
structural relations that thrive and are selected as circuits according to nerve impulse traffic.
importantly, they are organized in ways that provide for local decision making, even within th
ultrastructural architecture of a small number of cells. Does that sound reasonable to you?
PATRICIA CHURCHLAND: I don't know whether that is widely held, but I would argue that t
computer. It clearly isn't a kind of hydraulic system, or telegraph, or telephone switchboard.
really is a kind of computer. What kind of computer it is, we don't know yet, although we hav
ideas. It is clearly not exactly like the kind one has on a desk. It doesn't have that sort of arc
and it doesn't use those principles. But it must be the case that the brain is doing computatio
if we are to be able to see stereoscopically, for instance. It has to take information from the t
compute the disparity, and then determine depth and what is behind what. Doing that throug
interactions of neurons is best understood as computing. The exciting thing, I think, is that w
what kind of computer it is, that will give us radically new ideas for technology.

There already are powerful and capable network models that are yet too simple to be rea
the brain, but they have all the right "smell" about them. Currently, simple models of neural n

perform interestingly complex computations. They seem to be on the right track as models c
And they promise to become technologically enormously valuable.

3. A Buddhist Response -- B. Alan Wallace

By drawing a line between the two camps of Dualism and Materialism, Dr. Churchland defin
purely Western terms. Buddhism, however, fits comfortably into neither camp. Many of the a
long been leveled at religious thinking by scientists are aimed squarely at the Judeo-Christia
miss the mark when turned on Buddhism. Some of these issues are addressed in the discus
the two days of the conference, but the absence of a shared terminology and the limited tim
left important aspects of Buddhist philosophy and psychology incompletely articulated in the

It is not evident, for example, that the Western scientists participating in the conference u
that Tibetan Buddhism explicitly rejects any substantial dualism of mind and matter in which
asserted as self-existent things or substances. For example, at one point Patricia Churchlan
don't have the slightest idea of what it would be for a soul to see red, or feel pain, or think in
thoughts." But here, the "soul" is being treated as a unified "thing"-a concept utterly alien to
Buddhist psychology, in contrast, examines individual perceptual and conceptual processes
causal nexus in which each of them arises.

Serious misconceptions can pass unnoticed when we equate superficially similar constru
in fundamentally different systems of philosophy. Tibetan Buddhism has never harbored the
day-to-day mental processes exist independently of the body, as Allan Hobson implies wher
relationship between Buddhism and Dualism: "The essential linkage to what I understand Bu
is that consciousness is held by Dualists to be able to exist apart from and in some degree i
the brain." Nor has Buddhism ever drawn anything like the Cartesian distinction between hu
the Buddhist view, both humans and animals are similarly endowed with consciousness, wh
dependence upon their physical organisms.

But the lack of congruence between Tibetan Buddhism and Dualism is not by any means
is in agreement with the Materialist ideology promoted by Professor Churchland.

A Middle Path between Dualism and Materialism

In order more fully to understand the Tibetan Buddhist perspective concerning the body and
by looking at its view regarding the nature of phenomena in general. The Madhyamaka, or C
by Tibetan Buddhism at large challenges the assumption that any phenomena that comprise
experience exist as things in themselves. Thus, not only does this view reject the notion that
inherently existent substance, or thing, but it similarly denies that physical phenomena as we

are things in themselves. For this reason, the notion of an absolute, substantial dualism betw
matter is never entertained.

According to the Madhyamaka view, mental and physical phenomena, as we perceive ar
in relation to our perceptions and conceptions. What we perceive is inescapably related to o
modes of observation, and the ways in which we conceive of phenomena are inescapably re
and languages. This theory is not alien to science. One of the great architects of quantum ph
Heisenberg, declares, for example, "What we observe is not nature in itself but nature expos
of questioning."5

In denying the independent self-existence of all the phenomena that make up the world o
the Madhyamaka view departs from both the substantial dualism of Descartes and the subst
seems to be characteristic of modern Materialism, or Physicalism. The Materialism propoun
conference seems to assert that the real world is composed of physical things-in-themselves
phenomena are regarded as mere appearances, devoid of any reality. Much is made of this
appearances and reality.

The Madhyamaka view also emphasizes the disparity between appearances and reality,
different way. All the mental and physical phenomena that we experience, it declares, appea
existed in and of themselves, utterly independent of our modes or perception and conceptio
things in themselves, but in reality they exist as dependently related events. Their depender
(1) phenomena arise in dependence upon preceding causal influences, (2) they exist in dep
own parts and/or attributes, and (3) the phenomena that make up the world of our experienc
our verbal and conceptual designation of them.

This threefold dependence is not intuitively obvious, for it is concealed by the appearance
as being self-sufficient and independent of conceptual designation. On the basis of these mi
appearances it is quite natural to think of, or conceptually apprehend, phenomena as self-de
themselves. This tendency is known as reification, and according to the Madhyamaka view,
delusion that provides the basis for a host of mental afflictions. Reification de-contextualizes
phenomena without regard to the causal nexus in which they arise, and without regard to the
observation and conceptualization by which they are known. The Madhyamaka, or "Centrist
because it seeks to avoid the two extremes of reifying phenomena on the one hand, and of
of phenomena on the other. From this perspective it seems that the above materialist ideolo
extremes, by reifying physical phenomena and by denying the existence of mental phenome

In the Madhyamaka view, mental events are no more or less real than physical events. In
common-sense experience, differences of kind do exist between physical and mental pheno
commonly have mass, location, velocity, shape, size, and numerous other physical attribute
generally characteristic of mental phenomena. For example, we do not commonly conceive
affection for another person as having mass or location. These physical attributes are no mo
other mental events such as sadness, a recalled image from one's childhood, the visual perc
or consciousness of any sort. Mental phenomena are, therefore, not regarded as being phys

reason that they lack many of the attributes that are uniquely characteristic of physical phen
Buddhism has never adopted the Materialist principle that regards only physical things as re

4. The Spectrum of Consciousness: From Gross to Subtle

Patricia Churchland's presentation sparked a discussion in which the Dalai Lama distinguish
different types of awareness. Buddhist psychology identifies a spectrum of consciousness fr
with the gross being equivalent to those aspects of consciousness dependent on the brain th
by Western science. At the far end of the range, subtle consciousness is least dependent on
brain. The very idea of subtle consciousness is problematic for the scientists here, who assu
consciousness to be an emergent property of the physical organization of the brain. Aside fr
philosophical problems surrounding causal relationships between nonphysical phenomena a
there are also problems of a different order, as two disciplines try to communicate without a
terminology. Where Tibetan Buddhism uses the term "subtle" with the technical precision ap
elaborate body of theoretical knowledge and a long tradition of empirical testing of that know
meaning to the scientists is vague and sometimes contradictory. The problem of subtle cons
again in various forms throughout the conference and proves to be the most stubborn of stic
dialogue.

DALAI LAMA: There are a great many varieties of awareness, and degrees and qualities of
which are of a grosser nature, are entirely dependent on the brain. In respect to them, unles
functions, these grosser mental experiences will not occur.

That is interesting, but I should like to know: What happens when you get down to a subt
functioning in the brain-a level of functioning that is very minute in scale and degree-do you
grosser levels of mind, or awareness, are heavily dependent upon the physical brain. If we t
farther into fine detail and subject it to analysis in its finest, uttermost detail, the question is:
that level of awareness arise in response to stimulation, or can subtle activation of the brain
by a subtle change in the mind, or by something else, perhaps extra-corporeal?

I think of awareness as being of two types: conceptual awareness and sensory awarenes
that sensory awareness is directly dependent upon the physical components and functioning
turning to conceptual processes, when we think about something, isn't it evident that change
occur as a result of our thinking? When conceptual processes occur, are they produced by n
which give rise to the mental processes, which in turn give rise to further ramifications in the
it otherwise?

Sometimes when we recall something, we get some kind of image; then, depending on th
in various thoughts. There will certainly be some physical basis, some physical stimulation, t
to that original recollected image.

But isn't it true that on some occasions-seemingly out of the blue, as it were-a thought ari

image comes into awareness, which may have a number of important implications, repercus
question then is: What causes those conceptual events which occur without any cause that
subjectively? Are they elicited by something occurring in the brain, or might they have some
origin of stimulus?
PATRICIA CHURCHLAND: It must have a cause in the brain, or at least that's our expectati
has proved that that is inevitably the case, because our investigations of the brain haven't pr
far. But it is hard to see how it could be otherwise. Not being aware of the cause does not er
is no cause. It is just hidden from awareness. People were unaware for a long time of the ca
motion, but it definitely has causes.
ANTONIO DAMASIO: There is one example that might be important at this point. When som
coming out of the blue, one possibility is that it may be triggered by something explicit, but th
to us to come out of the blue because our conscious attention is focused elsewhere. We nor
focus only on a small fraction of brain events at any given time, and most of what is happeni
and also around us is in fact not under the range of our attention. This applies not only to wh
hear outside, but also to what goes on in our internal thought processes.

There is definitely only a very small range and content of information that we can ever att
something that was not attended to, a stream or ongoing chain of thoughts that you might no
could suddenly pop up. If your attention had not moved in that direction, then that would app
of a sudden, out of the blue. Yet, it was associated with a quite different chain of thinking tha
not then attending to, and which would still be dependent upon regular brain mechanisms.
DALAI LAMA: Must all mental events, even those that seem to come out of the blue, have p
your assertion here based upon a great number of observations-that a great number of men
do arise as a result of cerebral events? Are you making this generalization because it may b
admit that there could be exceptions? Or, have you established with one hundred percent ce
exceptions do not occur and you know explicitly why?
ANTONIO DAMASIO: As Pat said, there is very little that we have established at one hundre
anything.
DALAI LAMA: Isn't it the case that you have simply not found any mental events independen
rather than finding that there are no mental events independent of physical events? That is a
important distinction.
ALLAN HOBSON: Science will never be able to prove the latter assertion. Tomorrow we will
Dreaming depends explicitly on brain states that used to be considered extremely subtle, wi
physical explanation in brain activity. At present, I think it is very clear that all aspects of spo
thoughts that arise in dreams are related to specific activation of the brain and come from no
DALAI LAMA: According to Buddhist theory, there are some things that belong to subtle con
mind, that are independent from the body, from the brain. There is no assertion in Buddhism
thing called a soul or a thing called consciousness, some thing that exists independently of t
is no such thing existing independently of the brain or being dependent upon the brain. But n

consciousness is understood as a multifaceted matrix of events. Some of them are utterly de
brain, and, at the other end of the spectrum, some of them are completely independent of th
no one thing that is the mind or soul.

I am uncertain about Buddhist philosophy or psychology here in terms of the relation betw
and the body. Although in the traditional Buddhist context there is no specific reference to br
to conceptual thinking, there is reference to the physical activities, faculties, and organs invo
perception. Vision is understood to be a subtle form of matter which is in the eye, but I don't
specific reference, apart from the eye, for connections back and forth with the brain.

There is a distinction between sensory awareness and mental awareness, and in terms o
there is conceptual as well as non-conceptual mental awareness. And certainly it is a fundar
Buddhism that there is disparity between appearances and reality.

So what criticism do you have of the position I have outlined here?

ALLAN HOBSON: I would like to respond directly to the stated theory. I would say the claim
mentation which is independent of the brain is "subtle" is a function of our ignorance of the s
brain.

DALAI LAMA: When we speak of mental awareness, it does not always refer only to the sub
time of conception to the time of death, the body is obviously functioning in some way, but w
ceases to function as a body, there is still a very subtle form of consciousness and that is ind
the body. The fact that the body is able to act as a basis for mental events is dependent on t
of a subtle form of consciousness.

What you call consciousness has its basis in a subtle type of awareness. There is a capa
awareness, a kind of luminosity which is of the nature of awareness itself, which must arise
moment of awareness. In other words, there is a continuum of awareness that does not itsel
brain. This basic capacity exists right from the initial formation of the conceptus, prior to the
the brain itself.

ALLAN HOBSON: Western science would obviously not agree with that part of Buddhist the
that conscious awareness arises at some stage during brain development, when there are e
elaborate enough connections to support conscious activity. We would hold that there is no
consciousness. Consciousness, therefore, is not infinite in our view. It originates in brains, a
essentially expandable according to the number of brains that have been sufficiently evolved

When Does Consciousness Begin?

The discussion then turned to an issue that has received much attention in the West. A dete
consciousness begins is pivotal in the right-to-life debate that has polarized American societ
an active committee of the American Academy of Arts and Sciences that is pondering this p
know that the basic architecture of the brain is formed during embryogenesis, and that the b
remarkably well organized in its basic plan by the beginning of fetal life, after only eight wee

gestation.

But for all the attention the question has received, there is a startling lack of consensus a participants at this meeting on even the most basic criteria for determining whether an orgar The confusion is revealing. The scientific exploration of consciousness in the West is so you even a definition of consciousness that would allow us to recognize it unequivocally.

DALAI LAMA: At what point in the formation of the fetus do you posit consciousness arising

ALLAN HOBSON: It is impossible to say at this point.

ROBERT LIVINGSTON: Biologically it originates gradually, so it is hard to say precisely at w sufficient to meet some particular definition of consciousness, to measure its beginning. The biological organization, and probably the beginnings of consciousness, arise asymptotically with a biological schedule of neuronal and glial cell divisions, migrations, and elaborations in embryonic brain, with continuing development throughout gestation and post-natally. The br about 350 grams. It doubles in volume by six months. It doubles again by about the fourth bi Thereafter, it increases by only about ten percent, reaching its maximum around, roughly, th Consciousness certainly begins before birth, but how early is by no means established.

PATRICIA CHURCHLAND: How can you be so sure that consciousness begins before birth

ROBERT LIVINGSTON: For example, you can condition a baby beginning with the early par and can do so more and more subtly throughout that period.

ALLAN HOBSON: Conditionability doesn't imply consciousness.

ROBERT LIVINGSTON: I would have assumed that there was awareness, consciousness, sometimes red and sometimes completely black, that moves about, and manifests noises lik sounds or the sounds of blood coursing through the placenta. In this dynamic enclosure one against both elastic and contractile forces, change posture, relax, suck one's thumb, and eve outside sounds, such as voices and melodies. I would apply the same criteria that I would ap to decide whether it was conscious or not. A newborn babe looks around, reaches for the so sound, responds differentially to its mother's voice, and, when hungry, certainly seeks the br olfactory, gustatory, and tactile cues, and lets go of the breast when satiated and goes off to think the child is not conscious until it has linguistic categories in its head?

ANTONIO DAMASIO: It is a tough question. You can have conditioning, but that's it.

DALAI LAMA: I assume that even a fetus well along in its development in the womb must ha tactile sensation. I suppose it is unlikely that it has auditory or visual sensations.

ROBERT LIVINGSTON: It has auditory ability and, specifically, auditory memory. Even a ch by some weeks can recognize its own mother's voice differentially. It exhibits a change in he level of alertness when its mother's voice is presented by tape recorder. This means it has s elaborate acoustic memories before birth. And, it does not manifest such responses when th newborn's mother reads the same text on the tape recorder.

PATRICIA CHURCHLAND: Also, a fetus will jump-I mean when you are carrying it, it will jun can tell you. But this does not imply anything about awareness.

DALAI LAMA: It must have some experience and feeling.
PATRICIA CHURCHLAND: Not necessarily. It could be just responding reflexively.
ROBERT LIVINGSTON: But recognition of the mother's voice means the child has learned t
that voice, and pays attention to that particular voice.
ANTONIO DAMASIO: But it doesn't mean it is conscious.
ROBERT LIVINGSTON: You're right. But then, that leaves moot many questions about cons
animals. We depend medically mostly on behavioral manifestations. Are we not conscious o
for which we may be open-eyed and fully responsive, even behaving admirably, as in habitu
driving a car, but about which events we do not thereafter remember?
LARRY SQUIRE: I think that the neuroscientists would say that just as there is tremendous
subtlety to consciousness, so the brain has every bit as much complexity and subtlety and d
into the brain in increasing detail, one sees extraordinary specialization, especially in the pri
humans. For example, the brain has developed from fifty to one hundred different little areas
and temporal lobes, all specialized for different aspects of vision. Within each of those areas
of neurons and connections. Although one cannot prove the hypothesis in any final way, the
the brain has the capacity, and the complexity, for all of the subtlety that consciousness disp
neuroscientists would be sympathetic to the viewpoint that consciousness itself can have ca
of organization of whole systems, consciousness itself can roll forward, causing the events t
sequence. But the planning and execution of behavior is all attached to the physical substra
along with it. There could be little causal events at tiny places in our brain, or larger causal e
states of the brain, or constituents of the brain, that are organized essentially at the level of
thinking-events that are attached to the brain and organized at a level that moves forward as

On Specialization and Adaptation

DALAI LAMA: So, for example, in very deep meditation, when the mind is brought to a fine p
concentration, would you assume that this is associated with certain parts of the brain? Som
to concentrate very, very powerfully, and others have a limited capacity for that. Do you und
be a result of differences or deficiencies in the cells?
PATRICIA CHURCHLAND: Yes, there are differences in some aspects of the brain just as w
neuronal differences between people who manifest different musical capacities. Some sing
sing off pitch, others have perfect pitch. It is the same with concentration and other mental ta
evidently these capacities are similarly subject to improvement and discipline with training. It
wonderful to discover precisely the nature of the biological differences. It would be very inter
what goes on in the brain during meditation, for example, and how that compares with playin
listening to music.
ANTONIO DAMASIO: There could actually be two types of differences. One is one's genetic

brain development reflected in inborn aptitude or potential skill, such as aptitude for acquirin
talent, or the ability to express oneself well in language. Secondly, there may be differences
learned, and how one has developed through education.

Differences in ability, such as the ability to meditate and concentrate very deeply, would l
exaggerated by practice based on the original differences. But all that would certainly be asc
events. There are differences that could occur in different brain regions in a concerted fashic
augmented or entrained by practice, that could relate to those particular abilities to concentr
a given point.

At this point Robert Livingston provided an illustration of how the mechanisms of perception
unconsciously, to compensate for an inborn disability. In children with alternating strabismus
a muscle weakness prevents the eyes from converging correctly.

ROBERT LIVINGSTON: In these cases, the child automatically learns to depend on one eye
eye and then the other alternately. Otherwise he would see two images and not be able to te
rely upon. Such a child can do very skillful things like playing ping-pong or basketball, using
other, without being himself aware of which eye he is using. At the same time, conscious pe
dealing strictly with information from one eye or the other at any given time. This is indispens
child's correct application of consciousness to spatial judgments, and behavior. His conscio
swiftly and quite reliably switching alternately between the two eyes, and also switching cont
perception in order to guide body musculature, eye movements, etc. The brain is responsibl
instantaneous switching between two elaborate neuronal patterns of distribution, serving pe
but without self-consciousness being exerted on the control of the switching itself. The switc
entirely automatic and unconscious in cases of alternating strabismus.

The Continuity of Subtle Consciousness

Allan Hobson now addressed a direct question to the Dalai Lama, the first to be so boldly sta
of anticipation fell over the room. Years later, Larry Squire reflected on the lasting impressio
Dalai Lama's response made on him and the others present. His Holiness presents the logic
Buddhist position, but also acknowledges the anecdotal nature of his evidence, and echoes
framed by Churchland and Damasio, that science can very rarely claim one hundred percen
anything. In so doing, he voices a readiness to expose centuries of sacred tradition to the lig
unsparingly rigorous enquiry. It was not so much a concession of a point in the debate as a
willingness to engage with them on their own terms. Would they meet this challenge with eq

ALLAN HOBSON: What is the evidence, from your perspective, that subtle aspects of consc
independent of brain? That's one question. A second question is: Are you really sure about t

DALAI LAMA: When this world initially formed, there seem to have been two types of events
sentient, the other insentient. Rocks and plants, for instance, are examples of nonsentient e

we usually consider them to have no feelings: no pains and no pleasures. The other type, se
awareness, consciousness, pains and pleasures.

But there needs to be a cause for that. If you posit there is no cause for consciousness, t
to all sorts of inconsistencies and logical problems. So, the cause is posited, established. It i
certain.

The initial cause must be an independent consciousness. And on that basis is asserted t
continuation of life after death. It is during the interval when one's continuum of awareness c
one's body at death that the subtle mind, the subtle consciousness, becomes manifest. That
one life with the next.

At this moment, we are using the sense organs at the grosser level; then when we are dr
level of consciousness manifests itself. Then beyond this there is deep sleep without dreami
deeper level of consciousness.

On some occasions, people faint. Even when your breath temporarily stops, during that r
reduced level of consciousness. Consciousness is most reduced late in the course of dying.
physical functions cease, we believe that the "I," or "self," still exists. Similarly, just at the be
of life, there must be a subtle form of consciousness to account for the emergence of consci
individual.

We must explore further the point at which consciousness enters into a physical location.
the moment when and the site where consciousness interacts with the fertilized egg is some
discovered, although there are some reference to this in the texts. The Buddhist scriptures c
but I am interested to see what science has to say about this. During this period we believe
subtle consciousness, there would be a life beginning without consciousness. If that were th
could ever recollect experiences from their past life. It is also in terms of Buddhist beliefs rel
this topic that Buddhism expounds its theory of cosmology: how the universe began and how
degenerates.

Based on this metaphysical reasoning and other arguments, and based on the testimony
are able to recollect their experiences in past lives very vividly, Buddhists make this claim. I
practitioner, so based on my own limited experiences, and the experiences of my friends, I c
hundred percent certainty that there is a subtle consciousness.

You scientists don't posit consciousness in the same sense that Buddhists do. At the mo
conception, however, there has to be something that prevents the sperm and egg from simp
it to grow into a human body. When does that occur? Why does that occur?

ANTONIO DAMASIO: Biological properties....

PATRICIA CHURCHLAND: Of the cell and DNA. It is an important problem, but it has an ex
understand. It requires no special forces, no supernatural processes, no ghostly interventior

DALAI LAMA: We would like to discuss that in the next session. I want to know more, you se
in the fields of cosmology, nuclear physics, subatomic physics, then, of course, psychology,
these fields, there is a cross-connection to Buddhists' explanations. I want to know your view

through you, major scientific viewpoints may suggest some experiments, maybe something
same time, there are some Buddhist explanations that may provide a different perspective fo
experience is something very useful to me. Very, very useful.

Ever since we met, I have wanted to make clear an idea that is basic to Buddhism, espec
Mahayana Buddhist approach. Namely, if strong evidence arises indicating that a given thin
will be accepted. On the contrary, if there is strong evidence that suggests the absence of su
certain things that are specifically asserted in the Buddhist canon, the original words of Budd
then, these words are to be interpreted on the basis of valid evidence, and not to be accepte
value. In other words, we do not adhere to the literal meaning of Buddha's words when they
valid evidence.

Because of this basic Buddhist approach, which is very open, I really want to know your
if you find from your own scientific perspective any arguments against a particular issue ass
Buddhism, I would like you to be very frank, because I will learn and benefit from that.

Cosmology and the Origins of Consciousness

The discussion here returns to the origins of consciousness. His Holiness explains the causa
Buddhist understanding of the origins of consciousness and the role of karma in the formatio
In relation to the Buddhist distinctions between sentient and nonsentient, material and non-m
phenomena, Robert Livingston presents a scientific explanation of the biochemical distinctio
life and inorganic matter.

PATRICIA CHURCHLAND: One part of the picture that I didn't quite understand, or I guess
is the idea that there were originally two very different things that were created. There were
and there were nonmaterial things.

DALAI LAMA: My understanding is that by and large Western cosmologists still adhere to so
Bang theory. The question from the Buddhist view is: What preceded the Big Bang?

ROBERT LIVINGSTON: There are a lot of scientists who think that the time has passed for
of the Big Bang, and that there was not necessarily a Big Bang.

PATRICIA CHURCHLAND: Even if that's true, then all we can say is that we don't know wha
Bang, and it could have been a yet bigger Bang. But I think Western cosmologists would say
any evidence whatever that there was any nonmaterial stuff. We can see the development o
starting with amino acids, RNA, and very simple single-celled organisms that didn't have any
awareness, and the development of multi-celled organisms, and finally organisms with nervo
you find organisms that can see and move and interact. So the conclusion seems to be that
perceive and have awareness and to think, arises out of nervous systems rather than out of
preceded the development of nervous systems.

DALAI LAMA: The Buddhist view is that in the external world there are some elements that a

some that are nonmaterial. And the fundamental substance, the stuff from which the materia
known as space particles. A portion of space is quantized to use a modern term; it is particu
continuous. Before the formation of the physical universe as we know it, there was only spac
quantized. And it was from the quanta, or particles, in space that the other elements arose. T
the physical universe.

But what brought about that process? How did it happen? It is believed that there existed
conditions, or other influences, which were nonmaterial, and these were of the nature of awa
actions of sentient beings in the preceding universe somehow modify, or influence, the form
natural universe.

PATRICIA CHURCHLAND: But then I want to know why you think that. What is the evidenc

DALAI LAMA: There are some similarities between Western science and Buddhist philosoph
dealing with absolutes or one hundred percent conviction. In this way we are both faced with
philosophical limb.

The tradition that evolved in India dealt with many fundamental philosophical issues. We
for the existence of matter in the universe. Do we want to say it arises from a cause or no ca

The first fundamental philosophical question is: How do we determine whether something
That is the initial question. The factor that determines the existence or nonexistence of some
verifying cognition, or awareness: the awareness that verifies. You have some experience; y
so it exists. That's the final criteria.

Within the range of phenomena that fulfill the criteria of existence, there are two categori
that undergo dynamic changes, and things that are permanent, or unchanging. The latter ar
permanent in terms of being eternal, but permanent in terms of not changing. (In Buddhism,
changes is physical.) For the phenomena that undergo change, there should be a reason or
change possible. We can see that both the universe and human beings have this nature of c
they depend upon causes and conditions.

When we search for the causes, there are two types: substantial causes and cooperative
speak of one thing being the substantial cause of another, this means it actually transforms
For example, what exists inside a seed actually transforms into the sprout that arises from it
be the substantial cause of the sprout, whereas the fertilizer, moisture, and everything else w
cooperative causes. A farmer, for example, would be a cooperative cause for the arising of t
he didn't enter into the wheat crop as did the seed.

PATRICIA CHURCHLAND: This is a little like Aristotle, who spoke of proximal cause and eff

DALAI LAMA: So we can look at these phenomena that are subject to change and we can g
beginning, and ask: Did this arise in dependence on a cause, or in dependence on no cause
phenomena which demonstrate the nature of arising from cause, and then posit an initial sta
no cause, that would be inconsistent and very difficult to accept. How can you say, suddenly
happened without previous cause? There's a logical inconsistency in maintaining that somet
nature of being dependent upon cause, while at the same time claiming that initially it had no

In the ancient philosophical treatises in India, there emerged two different philosophical s
schools of thought, on this question. One accepted that the original cause had to be someth
as a God. From the Buddhist perspective, it is logically very uncomfortable to posit God as b
cause of everything. The problem, then, becomes: What created God? It is the same questi
PATRICIA CHURCHLAND: Good. That was the question I was going to ask you concerning
DALAI LAMA: So when we ask, what is the substantial cause of the material universe way b
history of the universe, we trace it back to the space particles which transform into the elem
manifest universe. And then we can ask whether those space particles have an ultimate beg
no. They are beginningless. Where other philosophical systems maintain that the original ca
suggested the alternative that there aren't any ultimate causes. The world is beginningless.
would be: Why is it beginningless? And the answer is, it is just nature. There is no reason. M
matter.

Now we have a problem: What accounts for the evolution of the universe as we know it?
the loose particles in space forming into the universe that is apparent to us? Why did it go th
processes of change? Buddhists would say there is a condition which makes it possible, and
condition as the awareness of sentient beings.

For example, within the last five billion years, the age of our planet, microorganisms have
existence roughly two billion years ago, and sentient beings, perhaps during the last billion y
"sentient" all beings that experience the feelings of pain and pleasure.) Especially during the
billion years then, we see an evolution into more complex organisms. Now we humans are e
world. And there is a relationship between our environment and ourselves, in the sense that
pleasure and pain in relation to this environment.

From a Buddhist point of view, we ask: Why do we experience this universe in this relatio
cause of our experiencing pain and pleasure in this present moment in this particular univers
must have contributed something, somewhere, sometime in the past to the evolution of this
It is in this respect that the question of karma enters. In Buddhism, it is held that there were
beings in a previous universe who shared continua of consciousness with us in this universe
provided a conscious connection from the previous universe to our own.

ALLAN HOBSON: What is the evidence?

DALAI LAMA: Yes, very difficult, very difficult.

THUBTEN JINPA: I would give an answer to that. When someone builds a house to live in,
plan. And on the basis of that plan you build the house, and then later you can live in it. In th
manner, sentient beings who produced the evolution of this present universe made this plan
necessarily consciously, by leaving karmic imprints within their subtle mental consciousness
when activated, made it possible to influence the formation of this universe.

ALAN WALLACE: We do not need to prove everything. We don't need to argue as to wheth
can be experienced. This is obvious.

DALAI LAMA: That's right. Once again, the criterion for determining whether something is ex

it is ascertained by a verifying cognition, which means a cognition that is not mistaken. For e
flower cannot prove the existence of a tree. Because the flower does not have verifying cogn
demonstrate the existence of anything else. Experiential awareness is an instrument throug
whether something is existent or not. So then the question would be: If we really possess av
cognition, then that must also have causes. Specifically, the awareness must have a substa
the substantial cause of awareness is matter, then why is it that some things have no consci
things, such as animals, have consciousness?
ROBERT LIVINGSTON: I have a suggestion here, Your Holiness. The thing that is particula
that they are composed of organic carbon compounds. Carbon has four symmetric valences
assembly of long-chain compounds. Simple carbon chain compounds can build spontaneou
replicating devices such as ribonucleic acid (RNA). And simple proteins are formed from prin
acids. These contribute to the production of more carbon compounds and replicating machin
deoxynucleic acid (DNA) evolves.

Out of a variety of such long-chain compounds come things like membranes. Sheets of c
molecules form membranes, asymmetric on the two sides. By surface tension, these form re
presenting barriers which favor differential transport of substances into and out of the spheru
replicating machinery of DNA, RNA, and enzymes is relatively protected within the spherules
beginnings of cells. The machinery that can replicate the whole aggregate, by replicating the
and the spherule, is favored over less competent systems for survival and continuing replica
operation of this selection process means that evolution is off and running!

Mechanisms for the replication of molecules increased opportunities for the appearance a
reappearance-and persistence, by iterative replication-of specially efficient or adaptive, or ot
advantageous, compounds, cells, and organisms.

The machinery of cells, which is assembled in a variety of short-and long-chain carbon co
composed of elements compounded from inorganic matter, is centrally important here as it c
self-organizing, emergent phenomena. By this time at least, the controlled cascade of electr
earliest beginnings of metabolic machinery, has emerged. Photosynthesis, the process of ca
electrons to make sugars and amino acids out of carbon dioxide and water and nitrogen, is a
source of high-to-low energy electrons. Self-replicating systems, organized functionally by tr
developed subtle metabolic pathways. Ways were "found," or selected, to take electron ener
sequences and branching pathways-from high to low energy levels in small steps. The esse
controlled reduction of electron energy in a staircase of small steps, as in a flowing cascade
rather than in an abrupt fall as in a waterfall. The controlled energy decrements are utilized t
molecules, to transport substances within cells, to transport products across cell membranes
and neurotransmission, to provide motile power to cells, to contract muscles, to control the c
chromosomes and other aspects of cell division, to control the fusion of cells, as in fertilizatio
operate all the innumerable physiological systems in multicellular organisms.

This controlled electron energy decrement is something not seen in the inorganic world. S

radically new has been added to the universe in this process. In the inorganic world, shifts in energy level are brusque, abrupt, jolting, with large, precipitate falls rather than slight decren electron energy levels. In living systems, delicate metabolic machinery is disrupted by such in electron energy levels. The kinds of abrupt shift in electron energy that occur in the inorga actually destructive of life. The effects of ionizing radiation, as in radioactive damage to livin are of this abrupt kind, characteristic of inorganic electron dynamics. This is precisely why io radiation is so disruptive and damaging to living-systems.

The metabolic control of electron energy transfer permits extremely subtle metabolic, ana catabolic processes such as are involved in the construction of the great heterogeneity of ca that are encountered in living systems. These processes are manifested in all sentient being ultimately, in the development and evolution of nervous systems.

ANTONIO DAMASIO: It is possible in fact that certain things came about by processes of se Bob suggests. Out of a prior low-level of order, certain chance events contribute to an increa which, by selection, is preserved and elaborated, providing new opportunities for the additio complexity and higher-level order. In this way, by Darwinian selection, higher forms of life er of life are self-organizing, including ourselves.

Presently, we have examples in mathematics and in certain systems that have been simu that indicate convincingly that there is absolutely no guide, no supervisor, no controller nece certain things to happen in an orderly and reasonably predictable way. As Ilya Prigogine has information can be gained without violating the Second Law of thermodynamics.

And the same thing applies to the way embryogenesis organizes complicated physical st brain. So, the thing we are questioning is whether you need to go back always to some origi supervisor.

In fact, when Thubtenjinpa had introduced the metaphor of the universe built, like a house a under the influence of the actions of sentient beings, he emphasized that this was "not nece consciously" done. Dr. Damasio's attribution of this influence to "some originating planner or tends toward a Judeo-Christian conception of a creator God and misrepresents whatjinpa ha articulate. To address this, the Dalai Lama adds the following clarification.

DALAI LAMA: Perhaps an understanding of what Buddhist philosophers call the four princip helpful in understanding how karma conditions the processes of evolution in the universe, ar sentient beings who inhabit the universe. Those four principles are: (1) the principle of depe principle of efficacy, (3) the principle of valid proof, and (4) the principle of reality.6

Generally speaking, that philosophy states that the universe arises and evolves in depen But how far, and how deep, does that dependence go? To what extent does the karmic influ and evolution of the universe and on the way the universe functions? What are the limits? W of effect of karma?

And also, in what categories of the four laws would the influence of karma come into effe extent is it through the law of nature, the law of dependence, the law of function, or the law o

myself am eager to investigate the limits of karma. I doubt that all natural phenomena, such
the planets, and how a particular tree may grow, depend upon karma, or are influenced or d
I suspect that these may be determined or brought about by influences apart from karma.

5. Mapping Brain Functions: The Evidence of Damage to Specific Brain Regions -- Antoni

The second presentation of the conference, from Antonio Damasio, provides concrete exam
between the brain anatomy and functionality. Damage to specific regions of the cerebral cor
precise and predictable effects on human perception, recognition, and language. Such corre
fundamental to the Western scientific understanding that consciousness exists solely as a p
complex architecture of the connections between neurons.

ANTONIO DAMASIO: I have some concrete evidence for Western science's view on the bra
examples of changes in mind-processes in individuals who suffer from localized brain dama
suffered a stroke, and had thereby lost a particular area of the brain, that would provide an o
study the results of the loss of that part. We would learn what the brain can do in the absenc
particular part. I shall present examples of what the consequences are for persons who lose
areas as opposed to those who lose other areas.

A very important fact is that the surface of the brain, the cerebral cortex, is made up of di
areas, each of which has characteristic functions. Cortical areas appear similar on the outsid
study them under the microscope, they reveal specialized organization and distinctive neuro
cooperate with each other.

Thus, a million cells here and another million cells there can communicate with each othe
very specific connections. There is no possibility for any one group to talk to all other cells, b
specific groups talk to one another, and receive responses from other particular groups of ce
arrangement is exceedingly orderly and systematic: certain strict principles of organization o
distinctively different patterns of intrinsic organization and external connections for each part
cortical area. There is a distinctive architecture, area by area.

At this point, Dr. Damasio projected a photograph of a building. The left half of the image wa
black and white photograph, while the right half appeared in full color.

ANTONIO DAMASIO: What this picture depicts corresponds to the subjective experience th
patient described to us, namely, the loss of color vision on the left visual field, with color visio
preserved on the right. This is an experience that many patients have. They report loss of th
color in one half of their visual field, left or right, rather in the same way that you can lose co
television screen if you turn the color knob. You can still see different shapes, and perceive
whether an object moves. But you cannot see color in half the visual field.

We have studied the brains of many such individuals over several years and found that th
critical area on the inner side of each hemisphere in the brain, damage to which leads to this

half-field color loss. On each side of the brain, this area is responsible for providing colored v
experiences to the visual field on the opposite side. It is important to observe that when you
similar damage to cortex elsewhere in the brain, no color loss occurs. We can confirm this lo
living patients using magnetic resonance images (MRI).
Dr. Damasio showed the group a series of MRI brain scans with the fusiform gyrus marked i
such images are obtained without doing any harm to the patient.
ANTONIO DAMASIO: Once you lose this particular area, and this alone, your visual experie
except for the loss of color in one half-field. There is no possibility of learning or otherwise re
experience of color vision in that affected field. If you produce equivalent cortical damage els
such loss will occur. In other words, there is a one-to-one relationship between color loss in
corresponding half-field of vision and this particular area of cortex. This area controls a colo
neuronal system.

We find a similar color vision deficit from removal of the equivalent cortical area in the bra
monkey. Further, we know that neurons in this region in the monkey are responsive to color
contralateral visual field. In other regions neurons may be responsive to visual shape or mot
color, or only incidentally to color, as in passing along color information to this particular area
region, therefore, there are neurons which specialize in the color processing necessary for c
perceptual experience of color.
DALAI LAMA: It is possible to see shape without color, for example, in the case of someone
but is it possible to see color without shape?
ANTONIO DAMASIO: That is an interesting point. If other parts of the visual system were da
particular area were left intact, we might suppose that we could perceive impressions of colo
seeing blueness, redness, colors without borders. Yet color perception is characteristically c
specific shapes: for example, this table, your garment, and so on. When we lose the ability t
also lose the ability to see light, and we develop a blind field. It is evident that the color-bear
traverse most visual pathways but that they contribute to conscious perception of color as an
cortical analysis in this location.

Now I want to show you another interesting example of mind changes resulting from a str
lesion demonstrated here (in the medial occipital temporal region) the patient loses the abilit
familiar faces. The patient is unable to recognize the faces of friends, members of one's own
one's own reflection in a mirror, nor can the patient recognize the faces of familiar public per
deficit in facial recognition is specific to particular cortical areas. It is only when you damage
particular area that this phenomenon occurs; damage elsewhere does not cause this effect.

Something quite interesting happens in patients who lose the ability to recognize familiar
consciously. They are still capable of exhibiting recognition of which they are entirely uncons
of learning about this is to measure skin conductance in such patients. It is known that norm
the process of recognition generate a dramatic shift in electrical resistance of the skin. If I we
encounter Pat Churchland, my conscious recognition of her would be accompanied by just s

response. If we encounter someone with whom we have had no previous experience, there recognition and there is no galvanic skin response, or only a small, weak response. A patien consciously recognize faces still produces a galvanic skin response which occurs only on ex faces, signaling an unconscious physiological response that accompanies recognition at sor With a specific type of brain lesion, we may be consciously oblivious of recognizing someon time there will be physiological signs of recognition at a lower level of brain organization, acc galvanic skin response. This indicates clearly that at some unconscious level I do know that

DALAI LAMA: The person in this case fails to recognize a specific face, but does he recogni human face?

ANTONIO DAMASIO: Absolutely. That is an important point. The person knows not only tha but also whether it is a smiling or a sad face, a good looking or an evil looking face, old or yo female. And yet, the conscious identification of the familiar face is not available. At some de however, there is a specific, personalized, unconscious discrimination.

Now we are considering levels of consciousness in physiological terms and at the level o When a patient has suffered the loss of this particular region of cortex, he cannot muster co recognition. The patient is unable to use features that identify that unique individual accordir patients unique personal experiences-the features that evoke the memoranda that identify th at a lower level of neuronal processing, the patient generates an electrical skin response tha unequivocal, unmistakable evidence that in fact his brain knows that person from prior exper sure sign of previous encounter and thus a sign of unconscious recognition.

The existence of evidence of this sort strongly reinforces the point that different regions c are making decisions, and are contributing in different ways to the integrative mechanisms t consciousness.

Categorical Distinctions in Consciousness

Is there or is there not a characteristic difference in brain structures and functions involved w to represent, recognize, and categorize different types of objects?

Let's consider responses to a human face, to an object such as a table, to an animal, or t now have very solid evidence to indicate that the brain areas, or systems, specifically conce face processing in conscious experience are entirely distinct in location and response from s with man-made objects, such as tables or chairs or glasses. And those in turn are distinct, a concerned with representation, recognition, and categorization of living things such as anima Our evidence comes from the study of patients in whom we recognized that damaging one a eliminates the recognition of animals and flowers and other natural objects, but does allow th respond quite rapidly to a long list of inanimate artifacts; for example, that this is a pointer, th are glasses, that this is a table, and so on.

We also have patients who lose their ability to recognize, for instance, a manipulable obje
be held and changed in shape by use of one's hands, and yet they can recognize natural ob
to us that there are distinctions, to a greater or lesser degree, among different categories of
are represented in our brains. The evidence indicates that different categories of stimuli are
differently in respect to how they are stored in memory, and how they are retrieved from me

There are, of course, other distinctions. For instance, take our ability to recognize musica
to learn melodies. Musical abilities occupy distinctly different brain regions, and I may say, e
different brain strategies, from any other categories of stimuli and brain processing capabiliti
destroy selectively the ability to recognize melodies and to identify pitch correctly, and yet pr
categorizing skills.

The ability to learn a motor skill involves entirely separate brain regions from those involv
ability to recognize faces, and is likewise distinctly separate from those involved in learning
general, language is quite a separate function, distinguished from the rest of these processe
location and functional organization.

Another area in which there is a critical difference has to do with the complexity of an obj
instance, picking up on your Holiness' earlier question, when I look into Larry Squire's face,
know that it is a face, a human face, and masculine. And I could even make a suggestion ab
instance, he might be like as a person. All of that is far simpler in terms of mental determinat
saying that this is the face of a particular individual, and still distinct from the further determi
that identifies Larry Squire s face as familiar to me. For that particular aspect of brain proces
Squire's unique physiognomy, there are uniquely defining features, united in a particular fac
representation and connected with a complicated and unique ensemble of associated exper

Evidently, the brain is continually pigeonholing objects into broad but distinctive categorie
flower is a natural object; that a face is a natural object; that a car is an unnatural, man-mad
object. This prompt broad categorization allows the neuronal representations of these differe
objects to be separately distributed in the brain for further processing and further categoriza
separate, more specialized, areas of the brain. Following "first echelon" initial categorization
channeling to more specialized brain regions, more refined and specialized brain processes
discriminanda by which the objects are further specified and individuated.

With respect to human faces, there are millions of male faces, millions of male faces with
millions of male faces with beards and glasses. These are obviously easy discriminanda, si
they enable initial brain processing to arrive rapidly at useful general categorizations. When
knowing that this face is Larry Squire's, that that object is the Eiffel Tower, that that dog is La
this flower is a cymbidium from my garden, this requires particularizing strategies in speciali
that can make use of unique, locally-stored information. Eventually, to be recognized as fam
individualized objects of whatever category have to be linked to remembrances involving un
experiences.

So there are evidently numerous ways by which the brain is able to recognize and disting

categories in an almost infinitely complicated universe. Separate and distinct brain systems
managing successive stages of distinctive kinds of categorization.

My final example shows that brain damage in a different brain system, rather than produc
the recognition of faces, or objects, or colors, produces a disturbance in the way the patient
different objects, and the way he examines the visual field. If we are afflicted by this kind of l
called the Balint syndrome, we see the world as though we were perpetually peering throug
field in which parts of objects seem to merge into one another and nothing is clear. In these
patient can never attend to more than one particular part of the visual field at a time. The Ba
is a major perceptual disturbance, but curiously, it permits recognition effaces and colors. Th
individual complains of not seeing things clearly, and seeing only bits and pieces at a time. Y
familiar face or image comes into a limited field, they say almost immediately, "Aha! There is
identify a particular person correctly. And when the color red comes into a functioning part o
field, they describe seeing the red distinctly.

Again, this points to the tremendous specialization of particular brain structures and oper
of which process color, others form, others motion, and still others categorize whole entities.
put various perceptual and mnemonic components together, presenting consciousness with
represented as categorized, coherent, integrated recognizable objects.

DALAI LAMA: This deficit involves only damage to the brain, not to the sensory faculties suc

ANTONIO DAMASIO: Exactly. If you lose both eyes, you are obviously blind. But in your inn
would not have any disturbance of this sort. If you become blind you can still think in color. Y
think of people's faces, by type or as particular individuals. And you can still imagine a lands
perfectly coherent and dynamic way. If you lose only one eye, you only lose binocularity, but
field is nearly as complete as before.

The patients I report as seeing everything in a fog are not suffering sensory disturbances
are suffering disturbances of higher order integration of perceptual information as processed
parts of the brain. Although the world is put together for us in consciousness, it is assembled
distributed, analytical, decision-making apparatus which has a surprisingly marvelous gross,
ultrastructural architecture.

Another quick example-I think you will enjoy learning about this example because it is qu
you lose a particular very small area in the left hemisphere, you find among Westerners who
Indo-European languages a loss of the ability to read, but not of the ability to write. The patie
text and is able to say, "Well, indeed, there are words here, there are letters, but I don't know
mean." They just look at the text line by line without being able to read it. But when I ask the
down a text which I dictate they fully comprehend the message and write it out correctly. Thi
are working with a different information system in their brain, one which allows the patient to
hand and write cogently. If, two minutes later, I ask the patient to read what he has written, h
it. He is absolutely unable to do so.

ROBERT LIVINGSTON: You might be able to remember it, perhaps, but you could not read

ANTONIO DAMASIO: Yes. This only happens with damage to the left hemisphere. If you ha
discrete area on the opposite side, on the right side, it will not have this effect.
Now it is extremely interesting that if a person speaks a language that is not phonemically-b
combination of letters for each sound, but instead a language written with ideograms, where
corresponds to an object, a word, or an idea, then the patient will not lose his ability to read
left-sided damage. But the patient will lose the ability to read the ideographic language if he
lesion in the corresponding part of the right hemisphere. Thus, following a lesion in his left h
patient would not have a reading problem if he has learned a language in which there are id
to letters representing phonemes. And a person with similar left hemisphere damage is not
understanding sign language, which is a visual language based on the production and interp
using hand motions and gestures. Once again, this emphasizes how separate and distinctiv
streams of brain information processing.
ALLAN HOBSON: How does the area represented in this brain lesion differ from that which
color perception?
ANTONIO DAMASIO: It is a slightly different lesion in terms of size, and the lesion that caus
is localized to the gyrus. It does not involve the depths of the sulcus. However, if the lesion g
Dr. Hanna Damasio calls the paraventricular area, then you have alexia, the inability to read
is further forward, you get color anomia, in which case colors are perceived but without the p
able to name them.

The Brains Representation of Body Awareness

There are patients who have damage to structures in the right hemisphere, as opposed to th
damage on the right side involves areas in the parietal lobe, and sometimes in the frontal lob
something quite peculiar happens in relation to the patient s awareness of his own body. Th
write, talk, and be very articulate, but if there is a pain or paralysis affecting his body, the pat
unable to report, in fact unable to realize, that he has any such a disorder. And, the patient d
the normal anguish and concern that one normally associates with cancer or a paralytic disc

I think there is interest on the part of Buddhists to discover that there are areas of the bra
control the processing of body awareness. There are areas in the brain that integrate summ
of body imagery, in much the same way that there are areas that provide smoothly integrate
the visual world. Somehow these parietal and frontal areas are important for us to feel the e
going on in our own bodies.

I would like to suggest that when we distance ourselves from our body in meditation, som
our brains that allows this conscious perception of separation to occur. It appears to allow pe
processing to change connections between areas dedicated to body imagery and the rest of
evidently happens that divides consciousness and separates perception of one's own body f

other events of which we are conscious. This, of course, would be an entirely normal proces
some of us would be unable to achieve without disciplined training. I wish I could do that, to
a switching of connections in a physiologically reversible way, as a Buddhist might in a norm
way, as opposed to simply determining neurologically that such a separation can occur as a
brain injury or stroke.
ALAN WALLACE: As interpreter, I am concerned with your terminology. You said when a pe
damage to the right hemisphere of the brain becomes subject to cancer or paralysis, the per
Are you saying that the person does not feel physical pain, or does not feel the mental angu
accompanies that pain or paralysis?
ANTONIO DAMASIO: The person can feel a sensation that he or she actually describes as
experiencing the usually accompanying suffering.
ALAN WALLACE: You mean mental suffering?
ANTONIO DAMASIO: First of all, the patient looks calm and unconcerned. When asked whe
anguish, he will ask, "Anguish about what?" you then ask, "Do you feel pain?" In some of the
pain syndrome, they will say yes.
ROBERT LIVINGSTON: Would you like to say something about personal neglect syndrome
ANTONIO DAMASIO: There is a condition occurring with particular lesions, especially involv
hemisphere, although they can also involve the left, in which the patient loses the ability to p
to bodily events that are occurring on the other side of the body. So, if I have a brain lesion i
hemisphere, I may be normally attentive and congruent about what happens on either side o
space around my body. But if the brain lesion is in my right hemisphere, and if, for example,
into my peripheral field of visual from the opposite (left) side, I will not automatically look in th
direction and pay attention to that field of view. Likewise, I will be less attentive to sounds, ex
unanticipated, originating on that side of me. This is "neglect." You would call it hemineglect
left side of the patient's body and the left side of the world from the patient's point of view.

Neglect actually affects not only the way we perceive the world but the way we perceive o
This is quite striking. We could do the following experiment with a person who exhibits this s
Suppose that such an afflicted person, after sitting here at our table, were asked to close his
recall who is seated around this table. A person with right-sided neglect, for example, would
individuals seated on his own right side. When asked, "And who else?" the patient would an
one else."

However, if you then ask the patient to imagine sitting at the opposite side of the table, an
describe, with his eyes still closed, who is seated at the table, the patient would name only th
the right side of his imagined position-the same individuals he was previously unable to iden
he would be unable to name those on the left side of his imagined position.

So in the patient's mind, the representation or evocation that can be elicited by mental re
also affected. This is a disturbance that affects not only one's perception but the geometry in
conscious processing of the recall of perceptual experiences.

DALAI LAMA: Are there are cases in which brain damage can be cured, or may the brain in
or restore, itself? If some portion is damaged and cannot function properly, might other parts
eventually come in to help perform those functions?
ANTONIO DAMASIO: Substitution is a very interesting point. It is true only for certain abilitie
certain faculties.
DALAI LAMA: Is it impossible for substitution to occur in this condition?
ANTONIO DAMASIO: That's true. In most of these cases, they cannot recover normal functi
instance, for motor function, that if you become paralyzed, generally you will recover some s
reason is that the motor system is organized at many different levels, and if you lose motor f
organized at one level, other levels may be able to compensate to a considerable degree.

But for certain abilities, like face recognition, or language, these are highly sophisticated,
corticalized abilities. They are organized asymmetrically in the two hemispheres, with little d
overlap between them. Then little or no recovery can occur. For instance, if a very skilled mu
ability to perceive pitch or to recognize melodies as a result of a stroke, that skill is lost forev

We have studied musically talented patients. We have followed the case of a professiona
suffered a stroke in his right hemisphere affecting his acoustic processing systems. His abili
arias, even from operas he had sung on stage for years, was entirely lost. His ability to sing
also lost. But, he can still go to the piano, with a score in front of him, and play perfectly, with
There is preservation of his ability to read musical notations and to control his piano playing
and feet appropriately. He is able to reproduce music correctly on the piano from musical no
able to match movements appropriate for what is indicated on the musical score. But if he tr
himself at the piano and sing, he cannot perform in that way. He cannot control his own mus
his voice, although he can govern his hands musically in playing the piano.

6. Subliminal Awareness and Memories from Previous Lives

Antonio Damasio's description of patients who show a characteristic electrodermal response
unable consciously to recognize familiar faces struck a chord with the Dalai Lama. He comp
of unexplained affinity for strangers, with the experience of memories surfacing from previou
DALAI LAMA: I think many, if not all of us, have experienced occasions when we meet anot
first time in this lifetime, and we feel some sense of familiarity, or affinity, with that person. T
to be a commonplace experience. We may meet another person for the first time and there i
spontaneous, subjective experience of affinity. In the case of spontaneous affinity experienc
encounter, will there be comparable changes in galvanic skin response?
ANTONIO DAMASIO: An excellent point, indeed. This is what we call "mistaken identity" in
protocols. When we make a mistake in recognition, feeling somehow that we know this pers
turns out that we actually don't, there is indeed a galvanic skin response exactly like that in

recognition. This accounts for about ten percent of all experiences we have when encounter
faces. In fact, from the point of view of conscious experience, some of those responses coin
feeling of familiarity, and the subject often says something such as: "That's very much like s
not quite," or, "That reminds me of...." Or they say, "I have the feeling that I know this person
believe it is not true." Or, "I really do not know this person although I have a vague sense of
DALAI LAMA: Buddhism, of course, asserts the existence of former and later lives. The way
from a Buddhist perspective is that during one's experience in past lives one meets individua
meetings place imprints on one's stream of consciousness. The stream of consciousness is
into this lifetime. There is therefore a subliminal affinity.
LARRY SQUIRE: The neuroscience perspective would be that our memories are relatively i
we encounter a person and believe that there may be a sense of familiarity, we are experien
correspondence and possibly some confusion with many other faces that we have encounte

Indeed, there is a phenomenon in aging individuals that we refer to as "generalization eff
faces become increasingly familiar. It produces a feeling of familiarity with more faces than w
younger because we have had so many experiences with faces. Perhaps our mechanisms f
quite as sharp as formerly. This would make us wonder how, if the memory is retained from
this sense of familiarity is encountered more frequently in later years when you might expect
memories to have diminished.
ANTONIO DAMASIO: Our evidence does not speak to the point made by His Holiness. Our
the fact that such misidentifications do exist. And we attempt to explain them on the basis of
correspondence that certain facial features do have. For instance, with an image that one re
sense of familiarity but which does not correspond to a truly familiar identity, that face tends
certain characteristics in terms of physiognomy with other faces, or with a "target" face.
As the discussion continued, Lewis Judd mentioned two other conditions that might have so
experience of past life memories: the deja vu phenomenon, and a mental disorder called Ca
which is characterized by a subjective certainty that a familiar person has been replaced by
double. Here, His Holiness comes back to the subject.
DALAI LAMA: You have the case of a person who, because of a stroke in a particular area o
recognize familiar faces. But even without conscious recognition of that person, there is a ch
electrical skin response equivalent to responses in instances of familiar conscious recognitio

I would like to continue along the same line of thought, but not concerning whether you h
recollection of another person, or whether your memory is impaired. Rather, I would like to a
question of your sense of affinity, closeness, or attraction to an object, such as a flower or d
cases we may look at a dog and feel an attraction to it. Here it is not a question of whether y
dog before or not, but simply whether you feel an attraction, which in Buddhist understandin
familiarity or habituation from the past. Is this subjective sense of affinity accompanied by th
skin response that we discussed?
ANTONIO DAMASIO: Yes, it is. It is more difficult to study those skin responses when you c

stimuli, because you have many more confounding factors. But you can do it. Your sense of
object, even if it is not an object you have ever encountered before and therefore is a novel
still be explained from the Western neuroscientific point of view, as the result of previous me

affective memory responses in your brain and body. That agreeable state can be described
response, in terms of affect. But the affective memories are evoked in your brain because th
mind (unconsciously perhaps more so than consciously) previous pleasant experiences with
classes of objects. I should point out that emotions and affect are bodily states that result fro
responses that may involve unconscious as well as conscious experiences.

For instance, in our model, a positive or negative emotion can be referenced to a change
a particular region of the body. In other words, we have states of the body that correspond w
This is distinct from states of the body that correspond to sadness, anxiety, anguish, or ange
in the Western view can be seen as the consciousness induced by specific brain states as a
perceptions of a variety of body responses to these states.

I think of human beings as brains with large bodies on their backs. Each brain carries its
time, a bit like a snail carries its shell. "We are more or less aware of carrying this body with
time. This neuroscience view is different from the commonplace view of consciousness acco
perceptions of "the world out there." In effect, we tend to think of ourselves as looking out int
through the telescopic system of an eye, listening through an ear-trumpet of a cochlea in the
the palpable world through a glove-like skin, and so forth. The neuroscience view considers
consciousness are self-organizing, self-activating systems which are central to all experienc
carapace, as it were. The outside world and body are represented in brain.

ALLAN HOBSON: I wanted to clarify two points. I think that the Dalai Lama was intereste
recognition question. I wanted to be sure that we all understood exactly what the implication

It seems to me that his interest concerns responses to faces that seem to be familiar, but
not been encountered previously in this lifetime. I could phrase his question in this way: Cou
technique be used to help decide whether or not there are representations in our brains of p
have met in previous lives?

I think that's the question His Holiness would like to answer. I'm not sure whether you cou
with that. But suppose we took pictures of everyone here. Then we could expose them to the
some future time, and see whether he could tell the difference, by conscious recognition and
skin response, between people that the XIVth Dalai Lama had seen and people that he had
a way to establish whether the number of recognitions is greater than the ten percent that yo
mistaken recognition due to similarities of facial physiognomy.

ANTONIO DAMASIO: I think, first off, that we earnestly hope it will take a long time for such
be feasible.

ROBERT LIVINGSTON: And therefore, that we should have repeated reinforcement of the D

witnessing our faces over those intervening years!
DALAI LAMA: There are instances where small children recollect their past life very vividly.
ALLAN HOBSON: But what is the evidence that they have recollected correctly and accurat
solid, quantitative, documentary evidence, not simply testimony.
DALAI LAMA: There are specific recent instances in which two girls in India recollected the
that they had known in previous lives. They knew the geography and the geographical name
recollect their home village of their previous life and call it by name. They also recognized te
in their studies in a previous life, but they couldn't even read the texts in their present lives.
PATRICIA CHURCHLAND: How old were they?
DALAI LAMA: Four or five.
PATRICIA CHURCHLAND: They could have talked to practically anyone in the meantime w
stories of the region and the people.
DALAI LAMA: In this case, both girls now have four parents each. Because their memory is
convincing, the previous two parents now accept each of them as being also their own child
where the children recollected people and places precisely from their previous lives-places t
been to, where their parents had never taken them, nor had their parents told them about th
out of their experience in the five years of their lifetime. They were able to recognize books t
very fond of in their previous life. Although they couldn't even read, they were specifically att
those particular books.
ANTONIO DAMASIO: A positive response.
DALAI LAMA: I remembered this case because one of the two girls had died in an accident
brain damaged. I myself, as a Buddhist, can't find an explanation for that small girl. You see
her previous parents very clearly, and also recognized her own previous books. Yet she can
Buddhist viewpoint, this is very difficult to explain.
ANTONIO DAMASIO: So she was taken by people to the place where she lived in her previ
DALAI LAMA: That's right.
ANTONIO DAMASIO: And in her previous life she had the accident?
DALAI LAMA: Yes. She was only about fifteen or sixteen when she died in the previous life.
parents, when they first detected these peculiarities, ignored the issue. The girl said this is n
my place is somewhere else which has a different name. The parents of this life didn't take i
thought she was simply fantasizing. But she insisted continuously. One day, her father told h
right, now show me." The small girl took her father very quietly a few miles away, to her prev
PATRICIA CHURCHLAND: It does raise the question of why it doesn't happen more often. I
to have souls that come from other lives, then the problem is why each of us does not recoll
detail an earlier life. I quite honestly don't have any beliefs about my earlier life.
ANTONIO DAMASIO: That's exactly what I was thinking. Why doesn't it happen more often?
was that girl subject to? Was there anything special in that girl's upbringing that would have
likely?

DALAI LAMA: In this particular case, I don't know how to explain it. In her previous life, she v
girl with no special training. Buddhism generally posits many different degrees of vividness o
important thing to note is that in her previous life, she had a healthy body but she met with a

From the Buddhist point of view, her recollection of her past life might have some relation to
experiences that were acquired in previous lifetimes. Ordinarily, it is difficult to remember on
Such recollections seem to be more vivid when the child is very young, such as two or three
even younger.
LEWIS JUDD: Does that recollection attenuate as the child gets older and when they grow u
DALAI LAMA: Yes. When the present body is fully formed, the ability to recall past life seem
LEWIS JUDD: What would the explanation for that be?
DALAI LAMA: Simply the dependence of the mind upon this body. The mental associations
increasingly dominant. There is a close relationship during the first few years of one's life wit
continuum of consciousness from the previous life. But as experiences of this life become m
elaborate, they dominate.

It is also possible within this lifetime to enhance the power of the mind, enabling one to re
memories from previous lives. Such recollection tends to be more accessible during meditat
the dream state. Once one has accessed memories of previous lives in the dream state, one
them in the waking state.

7. Steps toward an Anatomy of Memory -- Larry R. Squire, Ph.D.

Larry Squire presents an overview of the current scientific understanding of memory and how
brain's organization. Functions of memory have been found to be distributed throughout the
memories reactivate the original pathways of the experience remembered. But they are also
specific brain structures that control memory, independent of other aspects of awareness. D
drawn between different types of memory. There is short term and long term memory; decla
we consciously hold a representation of some aspect of experience; and non-declarative, un
that manifests, for example, as improved performance in a learned skill.
LARRY SQUIRE: Problems of brain function are so diverse and numerous that there are ma
investigators in this country studying brain function. There are many groups studying even a
specific as memory from many different points of view. This work is panoramic and is procee
different levels of analysis: How do single neurons change? What is the anatomy, and the ch
changes? How do neurons combine themselves into functional networks? How do these net
memory organized at levels of behavior and cognition? How is memory stored anywhere in t
different kinds of memory are there?

One might say that in the neurosciences there are two great problems: there is the proble

organization of connections among nerve cells in the brain, and there is the problem of how connections can be altered. Initial connections are concerned in part with the things that Dr. talking about. We inherit, when we are born, abilities for many different kinds of functions, fo perceive visually, auditorily, somesthetically, and by means of olfaction and taste. Infants do localizing sounds and responding to melodies. They can distinguish their own mother's voice are able to perform considerable coordinated locomotion. And each normal human baby inh capacity for developing language.

We inherit those abilities that have been shaped by selection during millions of years of e kind of cumulative record or memory of abilities that have favored survival and reproduction ancestors.

In addition to initial neuronal connections that we inherit, most animals also have the abil perceptions and behavior as a result of experiences in their own lifetimes. Experience can m system, and these modifications enable us subsequently to behave differently and think diffe consequence of individual experiences. We call that the ability to learn and to remember.

Although we do not understand the physical basis of memory in much detail, most neuros that memory is recorded in the brain as changes in the strengths of connections among neu networks of neurons that operate initially in a certain way. As a result of experience such ne exhibit changes in the strength of some connections. Some connections may get stronger, c strength. As a consequence of such changes, the network then functions differently.

Memory Reenacts Perception

One can usefully think of memory as an extension of perception. Ordinarily, perception can memory. We use the word "encoding" to refer to memory deposition, or memory registration learning. We know that encoding depends on many different factors such as the amount of a being paid to an event, how important the event is to that individual, and the extent to which can categorize or otherwise organize the event in relation to preexisting knowledge.

The results of the encoding can be held in storage so that later on, even many years or d is possible to recall that event. In part, we think recall occurs through reactivating some of th neuronal patterns that were important when the information was being registered in the first the fundamentals that we hold about memory is that it is directly linked to perception. Not on our brains specialized mechanisms for reading, perceiving music, and discriminating speech the ability to retain in memory the consequences of each of these different kinds of perceptu processing. We believe that memory is stored in a spread-out, neuronally distributed way in that memories are stored physically in the same areas that were initially involved in processi the event that is to be remembered.

Isolating Memory: The Evidence of Damage

One of the surprising discoveries of this century is that despite the fact that memory is close perception and attention and other intellectual faculties, nevertheless, damage to one or two areas of the brain will cause isolated memory problems. In these cases, memory can be imp being any impairment of self-awareness or intellectual functions. A very tiny part of the brain whereby damage can cause such specific memory problems.

Dr. Squire presented a magnetic resonance imaging (MRI) brain scan showing details of the

Here we have an image of the brain of a sixty-five-year-old gentleman who developed a s impairment. In this area of the hippocampus is a very small abnormality-the only abnormality detect using MRI images.

He has a severe memory impairment and is basically unable to learn from new day-to-da essentially forgets the moments of life experience almost as fast as they occur. His memory happened five minutes ago might be about as good as your or my memory for some not ver happened a couple of weeks ago. He also has some loss of memories for things that occurr especially the recent past. His intelligence is normal; he is fully aware and has an intact sens and full insight relating to his impairment. He has an intact memory of his childhood. He has personality and normal skills for getting along in the world.

Until recently, scientists thought about memory as being one thing. We were inclined to p individual had a problem that affected his memory in a global way. Indeed, there is a sense deficit is very pervasive because it affects his ability to learn words, to retain conversations, faces, verbal and nonverbal things, spatial layouts, and so forth. His life is terribly disabled, a appreciate, because of this memory deficit. Nevertheless, this individual, and other persons entirely preserved abilities for some other kinds of learning and memory.

DALAI LAMA: Is that persons long-term memory of events before the disability struck impair

LARRY SQUIRE: That is also affected, especially for recent years prior to onset of the disab

DALAI LAMA: Might a person recollect everything clearly up to a stroke or other impairment?

LARRY SQUIRE: That will often happen, but in cases of specific impairment of memory, it is suffer losses of memory for events that occurred prior to the onset of the disability. We call t memory loss.

DALAI LAMA: Isn't it possible for some patients to remember things from the distant past wit recall recent events?

LARRY SQUIRE: Roughly speaking, that's what we are talking about here. The main deficit store new information. You are particularly able to retrieve older memories of your distant pa

DALAI LAMA: Something that happened five years ago, before the memory deficit began, m to that time everything would be perfectly recorded and still recallable?

LARRY SQUIRE: That's exactly right. How far back in time the impairment goes and how de

will depend upon the severity of the brain defect.
DALAI LAMA: But does it happen, on occasion, that the memory up to the time of disease o
completely unimpaired, leaving memory deficit only for events after the onset of the disease
LARRY SQUIRE: It would be unusual to have previous memory complete up to the second.
accidents may have memories that are accurate up to one or two minutes before the accide
bad afterwards. This individual, however, has difficulty remembering events that happened a
twenty-five years prior to the time his brain became affected.
ANTONIO DAMASIO: Severity really reflects having different kinds of anatomical parts dam
retrograde amnesia. In virtually all patients, there are some kinds of memory loss for some t
accident took place. And in some, if there is a certain type of damage, the loss can be treme
affect retrograde memory for decades.

We have one patient whom we have studied for many years, an individual whom Larry S
also, who has a retrograde memory loss for virtually fifty of the sixty years of his life. There is
little memory left at the level of unique events, although he knows something about his life g
ROBERT LIVINGSTON: I would like to know, in this case, whether the hippocampus was in
intact prior to the stroke. I ask because otherwise a person might have been an alcoholic or
relating to atherosclerosis and be deteriorating as far as memory is concerned well prior to t
perhaps family and physicians didn't pay much attention to that until a stroke wiped out new
capacity.
LARRY SQUIRE: We are confining ourselves to cases where impairment came on in a singl
if the damage is severe enough, they may lose memory access for perhaps ten or fifteen ye
disorder. On the other hand, if the damage is less severe there may be memory impairment
to the disorder. All of these patients that I am talking about here have good, intact memories
life, say the first fifteen or twenty years.
DALAI LAMA: Does this show that there are physically different mechanisms for storing and
different periods of memory?
LARRY SQUIRE: Yes. The implication is that the hippocampus is important for storing new
retrieving recent memories. But as memories grow older, something changes in the brain, so
require this structure for retrieval any more.
DALAI LAMA: Is it possible that the storage facilities in the brain for the memories are unimp
the retrieval system is interfered with? In such a case, might you have the memories cached
not be able to get at them?
LARRY SQUIRE: That is an important question, and often asked. We think that this represe
storage. This is in part because we have patients who have a memory impairment for a shor
day, for example. And when such patients recover function in these brain sites, they never r
that lost day. It is as though those events were never recorded.

Different Types of Memory

DALAI LAMA: In Buddhist psychology, we speak of memory in terms of retention and storag
involve the capacity for retention, but not for the storing of memory?
PATRICIA CHURCHLAND: You don't mean retrieval? Or short-term as compared with long-
ALAN WALLACE: No. Retention is die initial imprinting process, whereas the subsequent st
for a longer term. However, one Tibetan term is used for both processes, imprinting and sto
LARRY SQUIRE: Western neuroscience makes a distinction between what we call short-ter
memory. These amnesic patients with memory impairment have intact short-term memory. T
back a short sentence and they can understand the meaning of such a sentence. Thus, they
for a short period of time.
PATRICIA CHURCHLAND: How long is short-term memory?
LARRY SQUIRE: It can last from many seconds to a few minutes. If you say "Four, three, si
six... four, three, six..." at intervals over a period of fifteen minutes, an amnesic patient can r
repeating it correctly whenever asked. If you leave and come back in a few minutes to ask w
was, he will probably be able to respond correctly, "Four, three, six." But then, if you distract
attend to a different task and ask him again what was that number, he will have no recollecti

So the brain makes a distinction between a short-term and long-term memory and more r
become clear that another and perhaps deeper distinction is very important. This is the disti
make between declarative, or conscious, memory and non-declarative, or unconscious, mer

Amnesic patients have a problem only in acquiring declarative memories, which form the
conscious recollection of past events. Many memories are like that: our memory for convers
to recall a specific face. But there are other kinds of non-declarative memories of which we r
unconscious.
Dr. Squire demonstrated two tests for the acquisition of non-declarative memories. The first
list of uncommon English words printed as though seen in a mirror.

One can learn through practice the skill for reading these words very quickly. Amnesic pa
completely normal ability to do that. In general, skills are abilities that depend on memories r
experience. But skill acquisition does not involve experiences about which we have very mu
knowledge. We don't have much conscious knowledge about reading, or tennis service, for
know consciously what one does exactly even though one has these skills; one simply does
to improve at skills such as reading this kind of text can occur in the absence of the hippoca
despite otherwise severe memory impairment.
The second example consisted of a list of words, followed by another list of the same words
first three letters of each.

Scientists call the second example "priming," as in priming a pump, a useful metaphor fo
You present a list of words to the subject, and then you display three-letter beginnings of tho
say to the subject: "This is not a memory test. This is a puzzle. What I would like you to do is

each stem or fragment to form the first word that pops into your mind." For normal subjects, high probability that the words they think of will be the words that they previously saw. And a memory-impaired patient will have the exact same ability and tendency to say those words.

The normal subject will say in discussion afterwards, "Oh, that's one of those words you j He will have a tendency to complete the word and also to remember that it was a word from memory-impaired patient will produce the correct word, but will not have any conscious reco word had been presented before.

We now think of memory as being composed of many different components. Clearly, we This kind of memory depends on the integrity of the hippocampus. Conscious memory is co It is concerned with making representations concerning the external world, about what occu relationships among events in the world.

Unconscious, non-declarative memories are not concerned with representations of the ex are concerned with behavior, with priming, with improving our ability to correctly identify obje instances, performance improves as a result of experience. But as we have shown, to maint skills, there is no necessity to retain recollections of the past. We simply adapt to the perforn requirements for the skill. We simply change our behavior in the course of acquiring skills.

We consider that non-declarative memories are relatively primitive with respect to evoluti example, snails and other simple animals have some of these abilities to change behavioral skills, as it were. If you touch a turtle on the head many times, it will keep its head inside the same is true for many snails. The animal simply changes its behavior a result of experience. is very different from consciously recollecting. There are unconscious abilities to change beh the abilities to improve the perception of something seen recently, or to develop a new move distinct from the abilities to consciously recollect different occasions of encounters and expe there is one particular brain system, the hippocampus, which is essential for conscious kinds not for developing sensory and motor skills.

One of the things that makes this an exciting time to study memory is that we can also st these phenomena in animals, including conscious memory in the monkey.

In one such study, the animal sees an object which he must push aside to disclose a rais one minute later, the animal is presented two objects. The monkey will now find a raisin only aside the new, unfamiliar object. By its performance, the animal informs us that it has recogn original object as familiar so as to be able to select the other object. Brain lesions in the hipp exactly similar to the patients' lesions, interfere with performance of this task.

One of the important goals of the neurosciences is to understand the significance of brain not only of what is connected to what, but what purposes are served by given connections. F as simple as perceiving a drinking glass on a table, we know now that the brain has two dist are each important for that ability. One area, in the inferior aspect of the temporal lobe, is im identifying what the objects are; the other area, in the parietal lobe, is important for identifyin they are in relation to other objects in space. This dissects perceptual processes in very fun

Now, if perception is to be transformed into memory, there need to be connections down hippocampus, through stations7 in the medial aspect of the temporal lobe. All of these must later on, in order to reactivate the representation of the drinking glass on the table, there mu activity through these circuits at the time of the original perception. These same circuits are critical for the ability to recollect conscious memories.

8. Brain Control of Sleeping and Dreaming States -- J. Allan Hobson, M.D.

Neuroscience and Tibetan Buddhism have both devoted a great deal of attention to sleep ar there is a clear overlap of interests in this area. In fact, the topic generated so much interest sides that it was to become the focus of the fourth Mind and Life Conference8

Allan Hobson provides a general tour of current scientific knowledge on sleep and dream implications of these findings for our philosophical understanding of consciousness. Most sig consciousness is understood to be a natural condition of the activated brain, and most of the associated with various states, whether waking, dreaming, or in deep sleep, is generated int brain itself, rather than being driven by sensory input.

Control of the regular cycles of sleeping, dreaming, and waking states is governed by rec of neurotransmitters. Because of their role in controlling relaxation, these chemical systems play a role in meditation also.

Lucid dreaming, in which the subject is conscious of dreaming even as the dream occurs of particular interest, having only recently been recognized, let alone studied, in Western sci Buddhism has a long tradition of dream yoga which includes training in lucid dreaming.

ALLAN HOBSON: I plan to identify some important themes in the science of sleep and drea discussion toward the clinical and philosophical implications of this work.

Those implications include the following: I think we can now conclude that good sleep an reciprocally related, as Buddhist philosophy has long held. More particularly, I think we can i the brain some of the structural bases of these reciprocal relations. Further, I think we can h how some of the practices that the Buddhist tradition has developed actually work in relation brain mechanisms. That is particularly exciting with respect to future experimental prospects

Obviously, in the West we also believe that sleep is important to health, and to the degre help people learn to sleep without pills, we will be in a much stronger position. One of the gr of the West now is the overuse of sleeping pills. So behavioral techniques, such as those Bu developed, that can be used to help people achieve peace of mind and good sleep are very

The second point about the clinical implications has to do with dreaming itself. I think we objectively identify the brain states associated with dreaming and help people, if they so wis access to their dreams. In other words, we are now in a position more easily to control drea to. I will discuss dream control later.

There are a number of other interesting topics that are of great importance to philosophy

practice. Philosophically, these issues really have to do with the relationship of brain activity consciousness. Perhaps the most important general conclusion coming from sleep research in all its varieties is specifically related to particular brain states. Consciousness seems to be condition of the activated brain. Furthermore, most of the activity of consciousness is interna In other words, the brain contains its own mechanisms for creating information, and most of concerned with processing its own information, input from the outside world being relatively Previously, in the West, models of brain function were largely input driven.

Now, I think we see that the brain has highly organized spontaneous activity, such that th rudiments of consciousness are inherent, self-organized, and built into the system.

So I hope these three themes-the clinical implications for sleep and its relation to waking of dreams and our capacity to access them, and the implications for theories of consciousne discussed following my presentation.

In such a brief time I can't possibly cover the wealth of material now known about these i will review five major conclusions.

Measuring Sleep and Dream Cycles

The first is that sleep can be objectively measured. We can, for example, measure activity o can measure activity of muscles, we can measure activity of the eyes. When we make these we can clearly distinguish three states: waking, sleeping, and sleeping with dreams. Further identify these three states in another way, simply by observing behavior, and using either ph time-lapse video to keep track of changes in body posture that are associated with the unde brain state responsible for the shift from sleeping to dreaming. In time-lapse video, a picture regular intervals, typically every 7.5 minutes, using a video camera instead of a still camera history of postural shifts throughout the night.

We have found that sleepers never make fewer than fourteen major body shifts during th from right side to left side to right side to left side during six to eight hours of sleep. And whe becomes less sound, they make more movements. With respect to some of your traditions c the right side,9 the real issue is, can a trained subject suppress body movement shifting anc normal sleep? This is a very simple experiment which could be performed with very simple t time-lapse video, which is easily portable.

Using measurements of die brain, eye, and muscles, we can identify three states: waking dreams, and sleeping with dreams. Nondreaming and dreaming sleep alternate in a regular about ninety minutes, with about the first sixty to seventy minutes being nondreaming sleep, or twenty minutes being dreaming. This means that in a night of six to eight hours of sleep, y have four or five dream periods, each lasting fifteen to twenty minutes, or longer. This mean given night of sleep, we have as much as two hours of dreaming, distributed at regular inter

the night. There is a lot of time spent dreaming.
DALAI LAMA: Are there any differences due to age?
ALLAN HOBSON: Yes. Sleep generally becomes shorter and shallower with age. And with a
decrease in the amount of time spent in the state of sleep associated with dreaming. The cy
remains fixed throughout the life span, once we are adult. Babies have a shorter cycle, and
lengthens as the brain increases in size. The newborn infant has about four times as much
as the adult does, which is a very interesting point to consider with respect to developmenta
DALAI LAMA: Is there any biological evidence to determine when the infant starts dreaming
ALLAN HOBSON: Biological evidence could never prove when someone starts dreaming be
psychological experience, but we know that REM sleep begins in utero. (Here we must be d
to language. There is an important distinction between language dualism and deep philosop

The three physiological phases that are associated with waking, sleeping without dreams
are characterized by measuring brain wave activity and that of the eyes and muscles. The s
associated with dreaming is called "rapid eye movement" or REM sleep because the eyes m
dramatically. At the same time, muscle activity is blocked. Our muscles are paralyzed excep
muscles. And the brain is activated. This phase of sleep is clearly identifiable in the human f
as thirty weeks of gestation, and it probably begins at least ten weeks earlier in a more prim
as early as at twenty weeks of gestation, the brain has organized and differentiated sufficien
this kind of alternation between brain states. But the dream state is much more prominent in
than in the newborn, so that at thirty weeks of gestation, the estimates are that this state oc
ninety percent of all the time.

Neuronal Controls of Sleeping, Dreaming, and Waking

We know that sleep is organized as an alternating cycle. The next question for the Western
is the cycle organized within the brain? We know that it is controlled by brain structures loca
of the brain stem. The brain stem looks somewhat like the base of a flower. It connects the s
to the blossom just as in a lotus plant. The bulb of the flower, by this analogy, is the brain ste
small but very important part of the brain, between the spinal cord and the rest of the forebra
our conscious activities. Neuronal machinery which controls the alternation among sleep sta
is located in a small region of the brain stem called the pons or bridge.

This location is obviously strategic. It can control inputs and outputs for the whole body. I
control activity throughout the whole upper brain, the forebrain, which we consider to be the
consciousness. Our third point, then, is that this regular alternation in sleep is controlled by t
stem.

The obvious next question is: How does the brain stem do this? Within this pontine regio
populations of nerve cells that have distinctive chemical signatures. One is the neuronal pop

supports the waking state, and we suppose it to be responsible for arousal and even anxiety signaling involves the release of amino acids, hence it is known as an aminergic system. Wh very active, we are very alert, but we may also become too alert. We may become anxiously

It is the proper regulation of this system that I think constitutes one of the goals of Buddh meditative practices. And this same system is obviously of great significance also to Wester is so not only because this population of aminergic neurons controls arousal, wakefulness, a anxiety, but also because outputs of this system affect vital functions like breathing, blood pr other visceral as well as cerebral contributions to our experiences.

This aminergic system in the pontine part of the brain stem is also involved in energy reg energy flow, and probably also with aggressive behavior. I think it is a key to understanding important aspects of human life. Moreover, it seems to play a significant role in many functio importance in Buddhist thought and training.

DALAI LAMA: Are such emotions as aggression, love, and attachment also associated with

ALLAN HOBSON: Not specifically, no. But, as part of the general continuum of activation, ot structures will be engaged, which will then, according to external inputs, govern the emotion individual. The emotional system is rather farther forward in the limbic part of the forebrain, i hippocampus, which was discussed yesterday. This brain stem activation site is not a specif control of emotions. It is a specific system for controlling the level of arousal of the individual whole, which thereby affects other systems, including emotional controls.

The aminergic system is one group of neurons in this critical region of the brain stem. Th of nerve cells in this same region is called a cholinergic system because it's chemical signat neurotransmitter-is acetylcholine. We can identify these two neuronal populations in the pon localize their cells precisely, determine their major connections, their chemical neurotransmi record their patterns of electrical activity.

The cholinergic system is apparently held in restraint by the aminergic system. Thus, whe system is functioning at a high level, the cholinergic system is functioning at a reciprocally re level. That is the situation in the waking state. As we go to sleep, the aminergic system decr activity, and the cholinergic system becomes relatively more active. The cholinergic system progressively more active throughout the period of deep sleep without dreams. Ultimately th populations become radically differentiated: the adrenergic system shuts off completely, and system reaches its highest level of activity just when you enter the dream state. Activation o cholinergic cells generates signals that contribute to eye movements, to inhibition of muscle activation of the forebrain.

These reciprocal shifts of functional states can probably also be influenced through medi

DALAI LAMA: Are you indicating that in the dreaming state you are even more relaxed than state?

ALLAN HOBSON: It is a paradox, because the muscles are completely paralyzed. To speak case is misleading. The muscles are actively suppressed, or inhibited. But the upper brain, t

very active electrically. In contrast to the waking state, this electrically active brain in the dre state is chemically distinctly different because of the shift in the neurotransmitter ratios. The brain is very highly cholinergic, the waking brain is very highly aminergic, while in each of th forebrain is highly electrically activated. We believe that this is very important for understanc differences between the waking state and the dreaming state.

So we now know that sleep is organized into a succession of states. We can identify and distinctive sleep states. We know that the brain stem controls the succession of waking/slee states. And we know that the brain stem controls that succession of states by altering the pr specific neuro transmitters which are represented in two reciprocal systems of neuronal con

The fifth and final point I want to make about the science of sleep is that we have tested making microinjections of very small amounts of chemicals into specific, localized regions of of experimental animals. By this means, we can control the overall brain states of wakefulne other words, by imitating the activation by acetylcholine in very specific, localized parts of th we can convert the whole brain from the waking state to REM sleep almost immediately, an many hours. If we put the same chemical, acetylcholine, into another part of the brain of exp animals, we can produce waking. The differentiation of these control systems is specific and

So we have obtained experimental control of the state of sleep in animals. To some exte experiments have been replicated in humans. Obviously, we don't inject chemicals directly i in humans. We use human subjects to measure states of sleep and wakefulness, and to obt conscious experiences. We use animal studies to investigate what's going on neuronally wit during different sleep and wakeful-ness states. All mammals share identical organization of of wakefulness, deep sleep, and REM-sleep (presumably dreaming) behavior. They all have complete with apparent awareness and interactive behavior with the environment. Such wak with slow-wave sleep, which lacks rapid eye movements and is associated with high-amplitu electrical activity throughout the brain. These slow-wave sleep states cycle regularly into the state associated with globally inhibited body movements except for rapid eye movements, s accompanied by low-amplitude, high-frequency electrical activity throughout the brain. In this all of the objective phenomena are equivalent to the state that in humans is identified by sub testimony of dreaming.

In humans and other mammals we see a complete suppression of muscle tone during R output is actively inhibited. Otherwise our dream states might be accompanied by our getting around-still asleep-acting out our dreams. Our dreams are typically characterized by the hal movements by ourselves and among other animate and dynamic things. That's because the forebrain, is actually generating elaborate visual and motor patterns which are not allowed t our muscles, perforce the general inhibitory control exerted by brain stem mechanisms. Onl are permitted to express this internal sensori-motor dreaming state.

Meanwhile, during REM sleep, the brain is electrically activated, even more so than in qu brain is intensely internally activated: hence we imagine that the dream arises because the

activated brain is actively processing signals that would ordinarily be associated subjectively vivid experiences and outgoing behavior. We hallucinate the experiences and the inhibited b were not inhibited. And that is our dream!

DALAI LAMA: What accounts for the rapid eye movements? The rest of the muscles of the b the dreaming state, and yet the muscles associated with eye movements are not. Why is tha

ALLAN HOBSON: The answer is that the eye muscle system is a very different sort of motor skeletal muscle system. Most of the skeletal muscle system is engaged in maintaining postu and that system is obliged to use a lot of tonic inhibition. The eye muscles don't have to do t are essentially weightless, their specific gravity is about equivalent to their surroundings in th activity of the eyes is to sweep about swiftly and relatively effortlessly. Because they work w beams of light, often from very remote objects, they have an enormous leverage and target accuracy in relation to the visualized world. The eyes are never completely static and they d against gravity.

Secondly, the eye motor nuclei which control eye movements lie upstream in the brain st aminergic and cholinergic state control systems in the pontine brain stem. All other direct mo face and lower muscles, lie within the pons or below the pons along the lower brain stem an Hence, the eye motor nuclei are most anterior of all direct muscle control mechanisms. They far forward of other direct muscle control systems that they are really a part of the forebrain serve conscious experiences and higher mental life.

A third observation is that moving the eyes does not contribute to skeletal motions and ot effects that might have the consequence of jarring us awake.

ANTONIO DAMASIO: Accepting your idea that we have an active suppression of antigravity keep us from moving around, it is clear that the eye muscles would not do that. But do you e movement of the facial muscles, which are controlled only slightly lower, in the lower pontine brain stem? They would not have much skeletal motion effects except by way of jaw movem the face presumably wouldn't have the consequence of waking you up.

ALLAN HOBSON: You don't see a lot of facial muscular movement, but you do see some. In facial expressions in REM sleep are particularly visible and dramatic, and quite charming. Th smiling that is produced during rapid eye movement sleep. If you watch a mother nursing a b see the baby, when he or she becomes satisfied with milk, begin to close the eyes as the su become very regular and rhythmic. Shortly, the eyes start to move actively, and the baby ha eye movement (REM) sleep. Then you see dramatic, spontaneous facial expressions, espec mother believes the baby is sending her a message of contentment and happiness. You can to mothers about this, and they will uniformly interpret the baby's behavior as meaningfully r generosity in giving the baby nourishment. That's quite an important ethological concept, this intergenerational signaling system that is so adaptive and useful in contributing reinforcemen for this uniquely mammalian, altruistic feeding behavior.

DALAI LAMA: Dogs make limb movements, and on occasion when a person has a rough dr

arms may flail about.

ALLAN HOBSON: Yes, but then it is not a nightmare. There are two kinds of frightening exp in sleep. Bad dreams, or nightmares, in which you imagine a scenario and frightening things occur in REM sleep. They can erupt, which usually results in the subject's spontaneous wak another kind of night terror, which tends to occur in nondreaming sleep but not in REM sleep emotional experience, lacking the associated hallucinatory activity that accompanies dreami night terror that may be accompanied by flailing limb movements.

There are some human subjects in whom the brain stem fails to inhibit the skeletal muscl have REM sleep, they act out their dreams. This is a very dangerous brain stem defect.

Now let's look at the way the sleep cycle is organized. First, as the night progresses, com sleep associated with little or no mental activity. Next are periods of sleep associated with dr dream periods tend to become longer as the night progresses, lasting thirty, forty, even fifty time. So the best time to obtain dream reports is in the early morning when these dreaming long.

The cyclic alternation of non-REM and REM sleep is very regular. This suggests that the neuronal controls themselves constitute a clock, or that they observe an accurate clock, whe activation of the dreaming state at regular intervals throughout sleep. This is an automatic, i process. It looks, therefore, as though this activation of the brain for dreaming purposes mus important in some way. We need to understand this better.

What is the Purpose of Dreaming?

This is one of the great mysteries of the science of sleep at present. What is the function of brain activation of dreaming during sleep? It is so prominent, almost dominant, in early life, t attracts Western scientists to the idea that it may be important for the development of the bra childhood and throughout adult life, although it is no longer so prominent, it nevertheless occ and a conspicuous part of one's adult life, ten percent or more. You go from an intrauterine e ninety percent dream time to adult experience of the reciprocal of that. We might suppose th perhaps necessary for maintenance of the brain in some important respect. This is what we for the next ten years: Exactly what benefits does this fore-brain activation, this dreaming sta suspect that it has something to do with the capacity to maintain attention during the waking

ROBERT LIVINGSTON: It might be that dreaming has also to do with problem solving. Amo the subject matter of dreams could well include, directly or by analogy, aspects of frustrated perhaps failed experiences.

There is abundant evidence from among scientists, artists, and others engaged in creativ that many of them have picked up cogent novel ideas and new patterns of thinking and perfo night's sleep, and expressly during dreaming. Many of their most important challenges and f

been cast in new light, opened to new strategies, or reformulated in entirely new and unexpe
thought, action, and pursuit. These intellectually revolutionary solutions have emerged in co
during or promptly following dreams. Perhaps the dreaming state can try out alternative perc
judgments, and behavior without penalty of consequences.

ALLAN HOBSON: As yet we have no specific evidence bearing on that issue. We do not kn
but they show brain waves indicative of activation associated with eye movements, and thes
periodically, at regular intervals, throughout their sleeping behavior. If we measure the electr
of a cat's brain when the cat goes from nondreaming sleep to REM sleep, we see that the hi
electrical waves give way to low-voltage fast electrical activity. At the same time the skeletal
is actively inhibited and the animal is totally relaxed. So the brain is turned on and motor out
off, except for eye movements.

Cells localized to the brain stem, in the vicinity of the nuclei that control eye movements,
to the visual receiving areas of cortex that process visual data. The electrical activity occurs
the execution of eye movements. This means that the brain has a way of keeping track of m
the movements occur. Signals recorded in the visual cortex faithfully encode the direction ar
eye movements, which are actually taking place in the dark. The brain stem is telling the visu
system where and by how much the eyes are going to be displaced, and hence what compa
between subject and visual field during whatever scenario is playing in the dream. The brain
specific information system operating throughout dreaming. This probably is the physiologica
dynamic visual experiences associated with dreaming. Dreams are richly visual because the
stimulated along with activation of the eye muscles.

We now have the interesting paradox that our brain, in the dark, with eyes closed, can tu
initiate messages that relate to vision and other aspects of our life experience. This is, indee
dream is.

DALAI LAMA: It is impossible, isn't it, for a person who has been blind from birth ever to see
dream state?

ALLAN HOBSON: It is impossible for them to realize this activation as visual because they h
of visual experience to bring to this synthetic task. This suggests that our visual system is er
exposure to visual events and that it is not simply intrinsic to that region of the brain. Blind pa
have had some previous visual experience in order to have visual imagery accompany their
acquired blindness see in their dreams, and see only in their dreams.

Yesterday, Dr. Squire distinguished between declarative memory and procedural, or non
We might expect the forebrain, including the hippocampus and cortex, to be responsible for
of memories, and other parts of the brain to be concerned with procedural memories associa
skilled behaviors. This part of the brain is constantly active throughout sleep and dramaticall
during REM sleep. In association with each eye movement, the activity of this part of the bra
leading us to believe that one of the functions of REM sleep may be actually to rehearse bra
the benefit of behavior. This would provide procedural learning during dreaming. So the mai

theory of dreams now attains further specificity. What we may be doing every night in our dr
our basic motor skills, practicing to make perfect, if you like, making certain that the central p
behavior are in good order. Although this is a speculative theory, it is provocative.

Lucid Dreaming

Dr. Hobson introduced the concept of lucid dreaming with an illustration of a man on a flying
is a favorite dream activity, and its obvious unreality provides a way of identifying the dream
ALLAN HOBSON: This man on a magic carpet, flying through the air, has taught himself to
advantage of some of the facts about dreaming. He knows that dreams are strange, that the
characteristics. So he tells himself before he goes to sleep that if he has a conscious experie
strange, he will know that he is dreaming. He needs to do this for about three weeks, every
few seconds before going to sleep, and then he starts to gain consciousness of his dreams.
new state in which part of his brain is acting as if it were awake while the other parts are dre
practitioners of this skill call themselves lucid dreamers. They can watch their dreams while
occurring.
DALAI LAMA: Is there special training that leads to that ability?
ALLAN HOBSON: It is simple. For three weeks you tell yourself before sleep that you ordina
two hours, and that if you have a strange experience, you are going to recognize consciousl
dream. It helps to have a notebook at your bedside and to write down your dream experienc
lucid dreams by this automatic procedure, a split consciousness. In other words, the power
quite appreciable, capable of changing the state of the brain.
ANTONIO DAMASIO: Have lucid dreamers been studied over a long period of time?
ALLAN HOBSON: Lucid dreamers have not been studied over a long period of time in sleep
question would be: What is the functional gain?
ANTONIO DAMASIO: What is the functional loss?
ALLAN HOBSON: Who knows? It could be that you are interrupting sleep in a deleterious w
is that their period of lucidity is fleeting. Even when they become highly skilled, the dream pl
slip away from them.

Until two years ago, there was no physiological evidence for lucid dreaming, and now the
can be trained to make a prearranged sequence of eye movements so as to indicate that the
lucid, and these eye movements can of course be recorded electrophysiologically.

During lucid dreaming, general body muscle tone is still inhibited. But of course they have
control which is presumably under the control of the frontal eye fields in cortex of the frontal
means of testing and documenting lucid dream states, the subjects are told to make three fu
movements to the left followed by three full-excursion movements to the right. The probabilit
occurring spontaneously is essentially zero

DALAI LAMA: In the Buddhist practice of dream yoga, there is a particular practice in which while in the dream state, is told to be conscious of the dream state, and told to meditate on s specific.

ALLAN HOBSON: Yes, it could very well be that this would work, and it could be experiment it has not yet been tried in the Western scientific tradition. It's a doable experiment.

Now this finding has lots of important implications, and I would like to emphasize two. Fo science, it gives us a way of making time labels within the dream so that we can correlate ph activity with mental activity more precisely. And it raises certain problems. It shows how sug contents can be.

What that means is that we can teach subjects to dream anything they want to dream ab the dream is taken as important evidence for a psychological or philosophical theory, we enc of a circular loop. The subject may be dreaming what he expects to dream about in order to and this does not constitute scientific evidence of anything.

DALAI LAMA: Are you implying that in psychology, where a dream may be considered of gre interpreting some of their theories, these experiments reveal that the psychological basis co

ALLAN HOBSON: Yes, precisely. So that's the bad news. The good news is that this lucid d plastic that it can be exploited for a variety of purposes.

DALAI LAMA: From a Buddhist point of view, one might be able to distinguish different state Generally speaking, a dream is a dream, something you can't control. But for the highly adva there could be possibilities for gaining certain insights through dreams.

ALLAN HOBSON: That's possible. Even at that level you encounter the same problem of wo evidence of anything other than purpose and expectation.

DALAI LAMA: I know some Tibetans who lived in Tibet prior to the 1959 uprising. Before the Tibet, they did not know about the natural trails and passes by which to get over the Himalay Some of these people I met had very clear dreams of these tracks and, years later, when the follow the actual trails, they found that they were already familiar with them because of the v dreams they had had previously.

ALLAN HOBSON: This is a so-called precognitive dream and there are many examples of th I would like to defer discussion of that until later, as it is an important question.

Dr. Hobson closed his presentation with another drawing based on a dream image: a man ri bicycles which are connected by an elaborate magical device.

ALLAN HOBSON: The good news is that dreaming is an autocreative state. Its plasticity car number of different purposes. This picture shows another drawing of a dream which indicate nature of dream experiences. What does it mean that there is no one sitting on the second b is a bachelor who throughout his dream journal complains of the fact that he has no compan interpretation and probably can never be proved scientifically, but it is nonetheless poetically Dreams are often poetically compelling and we should not lose sight of that important point.

9. Manifestations of Subtle Consciousness

The discussion now turns back to the question of subtle consciousness. The tantric systems are important in Tibetan Buddhism recognize manifestations of subtle consciousness in dee and in other states including orgasm. These are seen as opportunities to familiarize oneself consciousness in preparation for its manifestation at death.

The long-standing confusion surrounding the term "subtle consciousness" begins to clea discussion. Tibetan Buddhism understands a broader range of meaning in the term "conscio science, and "subtle consciousness" in particular may include mental activity that occurs in t Western science classifies as "subconscious" or even during states which we normally cons

DALAI LAMA: In a certain body of Buddhist treatises known as tantra, there is one called the A theory of this system identifies the following four states: the waking state, the dreaming sle nondreaming sleep state, and, finally, the orgasm. There is a kind of physical substance in t "drops," associated with each of these four states, and each of those four kinds of substance specific source and location within the body.

You have established the relationship of brain states and functions with certain mental st specifically the waking state, the dreaming sleep state, and the nondreaming sleep state. Bu not discussed the mind or brain state relating to orgasm.

In these same tantric treatises there is a lot of emphasis on the state of mind at the point Now there has been some discussion here concerning whether or not subtle states of mind the subtle state of consciousness is often not manifest, not evident. However, it is posited in treatises that at the point of orgasm, the subtle awareness then becomes evident. In fact, th occasions in which to varying degrees the subtle form of awareness manifests itself: orgasm sneezing, and deep, dreamless sleep. In each of these four cases, to varying degrees, the s does become evident. Somehow the consciousness deepens.

ALLAN HOBSON: This is interesting. I would say that both orgasm and sneezing are state-d and they are subsumed in our way of thinking among the other states. For example, sneezin waking state, and never occurs in sleeping. Orgasm occurs in the waking state, and it can o but it does not occur in nondreaming sleep. Yawning occurs in the waking state, when one is

DALAI LAMA: Do you see any physiological differences in the state of the brain during those states?

ALLAN HOBSON: The only work that has been done is in relation to yawning. There is some the brain associated with yawning. Not very much has been done on orgasm in any state. Th in dreaming sleep is so low that it is not easy to study. But lucid dreamers are very good sub study because they can induce orgasm at will. It is one of the reasons people enjoy lucid dre they can have sexual pleasure without a partner, without social consequences.

ANTONIO DAMASIO: There are changes that happen during yawning and sneezing, but bra

orgasm are much more marked. They have to do with changes in oxygen delivery to the bra
changes in breathing patterns, changes in heart rate, sweating, vasodilation, and tremendou
in chemical mediators, including dopamine, serotonin, acetylcholine, and endorphins. There
change in a variety of chemical substances that directly affect the actions of neurons in diffe
So you really can alter consciousness in the broad meaning of the term. Yawning and sneez
briefer periods.

DALAI LAMA: Do you find a common denominator in these states?

ANTONIO DAMASIO: It would be difficult to give an adequate answer. I believe that the kno
answer that question is too limited. Certain things come to mind: changes in oxygen delivery
within the brain and vast chemical changes. So at least those two global shifts which can inf
functions occur in each of the four states.

LEWIS JUDD: There isn't fully substantial data on these problems. And sneezing, at least, is
duration.

ALLAN HOBSON: That is an important point. States relating to sleep might be said to be tor
endure for long periods of time. In contrast, the first three examples you gave-sneezing, yaw
orgasm-are phasic events which occur relatively rapidly and are over fairly soon. The neural
to reflect that difference.

I should like to understand what, according to the Buddhist tradition, is the state associated
nondreaming sleep? How is it experienced? What are its characteristics?

DALAI LAMA: Within the Buddhist tradition, we don't speak in terms of the brain but rather o
awareness, and also energies as these are experienced subjectively. Within that context, a
between grosser and subtler states of consciousness associated with grosser and subtler st
within the body. In deep sleep, the five sensory modalities have become inactive, and corres
centers associated with them have become inactive. These changes are considered relative
take place in a sequential process of going into deep, dreamless sleep, with these grosser s
going dormant and the more subtle state of purely mental awareness becoming evident.

In the mind that is untrained in meditative practice, this sequence of the mind becoming r
frequently not be evident. There are eight stages in this process of going into deep sleep. Fo
very finely disciplined in meditation, each of those stages will become evident experientially.
the nondreaming sleep state, the dreaming state is understood to be somewhat more gross.
certain texts, there are physiological processes that correspond to these different mental sta
are associated with subjectively experienced energies in the body.

To explain this more elaborately, we need to go into the whole system of channels and e
the body, the cakras. But, without going into that for the time being, it can be said that in the
state, these energies tend to be drawn into a locus here in the center of the head, at the leve
forehead. In the dreaming stage, these energies will be even more drawn to a point in the th
sleep state, these energies are more drawn into the heart. The location is not the physical h
but the heart center which is right in the center of the chest.

Certain events are experienced in meditation that seem to corroborate this theory. For ex
meditation, it is possible to bring your awareness into the heart cakra, and sometimes when
person will faint. On other occasions, the meditative awareness, finely concentrated, may be
area of the navel. And at this juncture, it has been found experientially that heat is produced
concentration. If you look at the anatomy of the body, you don't find these cakra points.
ALLAN HOBSON: I would like to come back to the question of the meditation associated wit
sleep in a trained subject. Tell us, for example, what are the characteristics of the deepest s
respond from the point of view of Western science.
DALAI LAMA: I don't know! Through training, at that deep level, awareness eventually becom
deeper. Then, finally, at the deepest experience, breathing stops.
ALLAN HOBSON: In general, I think that our experience is the same. But we must be very c
terminology. We distinguish objectively five stages in our formulation: waking and four stage
DALAI LAMA: From a Buddhist point of view, the eight stages are associated with the dissol
elements within the body. The five elements are the elements of earth, water, fire, air, and c
Bear in mind, "earth" doesn't mean dirt, it refers to the solid constituents of the body; water r
fluid constituents, and so on. The dissolution of these elements takes place through five seq
and there are three more, corresponding to more and more subtle states of consciousness.
most subtle.
ALLAN HOBSON: It might interest you to know that in nontrained subjects, when we perform
various stages of sleep, we get less and less evidence of conscious experience. In other wo
stage of nondreaming sleep, defined physiologically, is associated in our untrained subjects
levels of consciousness. And in fifty percent of the awakenings there is no evidence of cons
That doesn't mean that it couldn't be changed by training the subjects. But the evidence, fro
view of the brain, is that you would need to provide a lot of training relating to the physiology
THUBTEN JINPA: I think there is a certain misunderstanding of this term "consciousness." I
philosophical or psychological term, consciousness is conscious, whereas, when Buddhist tr
term, it has a wider meaning. It includes both the subconscious and unconscious levels as w
ALAN WALLACE: The terms "conscious" and "unconscious" are not used in Buddhism. Rath
differing degrees of clarity and subtlety of awareness. Even when someone has fainted, for e
regarded, in Western terms, as unconscious, from a Buddhist perspective a subtle level of c
still present.
DALAI LAMA: As early as the seventh stage approaching deep sleep, you would say that yo
declined. That is, the mind is not clearly apprehending anything.

In Buddhist psychology, we refer to sleep as one of many mental factors. There are fifty-
factors, among which sleep is one. But it is said that the mental factor of sleep precedes the
state, meaning the nondreaming state, just as fear may proceed fainting without going into it
analogy: Once you have fainted, you feel no fear. However, it can be fear that leads to your
fear doesn't go with you into the fainting. Thus, analogously, in the nondreaming deep sleep

factor of sleep has already passed.

It is a matter of terminology. Just how this mental factor of sleep in Buddhist terminology to Western terminology remains to be seen.

ANTONIO DAMASIO: I have a question, for clarification. When you have the very subtle cor supposed to have just before death, that really does not mean that you have heightened, gr rather the contrary. It means that in fact you are reducing perception to very low levels, right

DALAI LAMA: Yes.

ALLAN HOBSON: That is very important.

PATRICIA CHURCHLAND: I had assumed exactly the reverse.

ANTONIO DAMASIO: I also had the opposite idea.

DALAI LAMA: One of the purposes of tantric meditation is to prepare you to be able to utilize opportunity. The point is to transform that stage of mind into wisdom, because it is the most the mind. There is less influence of conditioning, so it is more pure.

ANTONIO DAMASIO: Mental exercise in preparation for death. DALAI LAMA: Yes, it is very

LARRY SQUIRE: Certainly, modern neuroscience is very sympathetic to the importance of t specialization and differentiation of the brain tells us that things are going on sometimes aut sometimes in ways that we just don't have access to, given that we are using language mos understanding as well as communication.

This is dramatically brought out in experiments with patients who have had the two halve separated surgically. In those people you can show that the right side of the brain can be ge and doing things that the left side of the brain, which is the speaking half of the brain, does r understand. The left side may then make up things, confabulate, to explain behavior for whi the origins.

10. What Constitutes Scientific Evidence?

A persistent theme throughout the conference is the criteria for proof of an argument. How d know? When is it reasonable to generalize from particular observations? How do we deal wi Should testimony-allowable evidence in law-be completely discounted by science? How can which relies entirely on "objective" observation, begin to account for the subjective experienc consciousness? Both science and Buddhism rely on methods that constantly test belief agai experience, but Buddhism allows subjective experience as valuable evidence in the study of

DALAI LAMA: There are certain people who feel they have out-of-body experiences while dr

ALLAN HOBSON: This has not been studied in the laboratory, but it is easy to imagine how arise since it is possible to hallucinate practically anything during dreaming.

DALAI LAMA: There are accounts of people experiencing this sense of leaving their body, a things in the external world, and later being able to recall events that presumably took place

the point of being able to read a book in someone else's house. Has there been no scientific
this type of testimony?
ALLAN HOBSON: That is correct, there has been no scientific investigation of these. But I w
discuss this issue because I think that the issue of precognitive dreams, out-of-body experie
of previous lives, all have a problem in common for science. And in discussing this issue, I w
clear, first, that my mind is not closed. But I am a scientist. So the opening in my mind is pro
narrow!

Now this narrow opening, which is guarded by skepticism, is a crucial part of our scientifi
discipline, I believe. It is as important to our understanding of the truth as is inspiration. It is
wish to ignore the truth. It is a wish to critically test belief against experience. So in that spiri
think that Western science has a lot to offer, as a tool, and not as a weapon.
DALAI LAMA: Yes, very good. Beautiful.
ALLAN HOBSON: The question is: How can we advance any of these claims above die stat
testimony and anecdote?
DALAI LAMA: The best thing is to experiment on those people who make these claims.
ALLAN HOBSON: That is one way. But then the question becomes: What kind of experimer
that, let me add one more point that I think is important. In a court of law, testimony is impor
evidence.
DALAI LAMA: Is it not held in science, that if some event or experience is true for a normal p
be true as well for all other normal persons?
ALLAN HOBSON: That generalization is not one of the demands that one makes. It is true t
exceptional individuals. We know that not everyone is a lucid dreamer, for example.
PATRICIA CHURCHLAND: It would have to be that every similar person must have that cap
would be hard to tell whether two or three persons are similar in the right respect. Yet it wou
that everyone who was similar to that person would have that property or share that experie
ANTONIO DAMASIO: Or at least we need to have one example that would be convincing. If
a cat can fly, we would not need to see any other cat fly. If only one had verified flight capab
would be able to refute the statement that all cats cannot fly and we could deny that that's a
All you need is one solid example of something and you have proof.
ALLAN HOBSON: The fewer the examples, the stronger the evidence must be.
DALAI LAMA: Yes, that's right.
ALLAN HOBSON: Generalization will help you, even if the effect is weak, because generaliz
widely distributed. So if you are going to rely on individual cases, exceptional individuals, the
evidence must be particularly convincing. To overcome skepticism- and the skepticism in ou
marked, because there have been so many claims in the West, as in the East, of this sort of
when put to critical test, do not convince us as constituting evidence. It constitutes testimony
evidence.
ROBERT LIVINGSTON: The history of science is largely an account of disabusing ourselves

speculative suppositions. Elan vital and phlogiston are but two examples, each widely adher
ALLAN HOBSON: There is another important point I would like to discuss concerning metho
to me yesterday that there is an important distinction between a retrospective experiment an
experiment. Maybe, Lew, you would comment on that and illuminate the point.
LEWIS JUDD: I think that in the Western scientific tradition, the basis of the ultimate, so-call
truth, is really created when you start from a certain point, establish a set of experimental co
then watch it unfold. This is in contrast to looking back from a point to find evidence by which
scientific truth. So, for example, in one of the issues that was raised yesterday, about the me
two little girls of their past lives, we were saying that there are various ways one might expla
Not necessarily to discount it, but ways that would survive skepticism.

On the other hand, if one were to conduct a prospective experiment, starting from scratch
the information we are gathering today might play out in future lives, there might be a way to
Dalai Lamas as to whether or not they remember neuroscience information that they acquire
years from now, or fifty years from now, or five hundred years from now.
ANTONIO DAMASIO: May I add that any observations made up to now can be the basis for
hypothesis, rather than being immediately taken as evidence. With that hypothesis, with that
can proceed to set up experiments deliberately to test whether the evidence supports the hy
just how strong the evidence is. In experimental research, we tend to go that way. An observ
leads to a hypothesis, a theory is constructed, and then we conduct experiments and decide
hypothesis really is.

It tends to be the case that we never prove anything. In fact, all that we can do, very mod
determine whether or not our experimental results are strongly in favor, or slightly in favor, o
against the hypothesis. We decide on the weight of all pertinent evidence.
LEWIS JUDD: Is Your Holiness familiar with the concept of prospective design of experimen
let's say we have a hypothesis, a theory that if a certain drug A, is given to an individual it wi
certain symptoms. That's the hypothesis. One would then design an experiment to give the d
under controlled circumstances, and measure the effects to establish whether the drug had
other effects. To make the evidence more foolproof, you could conduct double-blind experim
persons administering the drug and those measuring the effects would not know whether the
actually receiving that drug or some substitute drug or a placebo. There are a number of trac
can be used to avoid subjective impressions creating biases and introducing noise into the e
DALAI LAMA: This issue is very clear.
ALLAN HOBSON: Again, I wish to emphasize the point about creative use of skepticism. Wh
do that to you might appear to be negative, is really their attempt not to be fooled. In other w
Western scientist does in constructing prospective experiments is to try to set the conditions
that all alternative explanations will be eliminated and that his hypothesis can be disproved.
important spirit of science is to be open to giving up the hypothesis. That's an important attit
difficult to fulfill.

DALAI LAMA: I suspect that sometimes scientists, too, tenaciously cling to a hypothesis so r
still adhere to it, regardless of contrary evidence.
LEWIS JUDD: Yes.
ALLAN HOBSON: Skeptical investigation is very important.
ANTONIO DAMASIO: Actually, one measure of the quality of a scientist may be how readily
cherished hypotheses. In fact, we are consistently adhering to very good ideas which may in
clearly shown to be wrong. And there are some people who simply can't give them up and w
DALAI LAMA: On one occasion, I met a group of scientists who introduced themselves to m
and one of them told me, "I am a fanatical materialist. I will not accept the existence of mind
question is, for these extreme, radical materialists who refuse mind's existence, insisting tha
does not exist, why are they saying that? What do they mean by the term "mind"?
PATRICIA CHURCHLAND: What they mean by mind is the brain. That's what they mean.
DALAI LAMA: Nobody can deny the existence of the brain.
PATRICIA CHURCHLAND: When they said the mind doesn't exist, they mean there isn't so
is independent of the brain. They think of perceptions or thoughts or dreams as processes o
that was really what I was talking about yesterday. There is a common idea that there is a n
but when you look more closely at what neuroscience has discovered it looks like there is or
DALAI LAMA: Even in Buddhism there is no notion of a self-sufficient, self-supporting "I," se
This is thoroughly refuted. Buddhists do assert the existence of awareness, but to use the te
Buddhist context is misleading, because Buddhists don't use the term and by and large refu
a soul.
PATRICIA CHURCHLAND: But do you think that there is something, I am not sure what to c
awareness that can exist independently of the brain? For example, something that survives
DALAI LAMA: Generally speaking, awareness, in the sense of our familiar, day-to-day ment
exist apart from or independent of the brain, according to the Buddhist view. But Buddhism h
cause of this awareness is to be found in a preceding continuum of awareness, and that is v
stream of awareness from one life to another. Whence does this awareness arise initially? It
fundamentally not from a physical base but from a preceding continuum of awareness.
LEWIS JUDD: So it is independent of brain function.
DALAI LAMA: The continuum of awareness that conjoins with the fetus does not depend up
some documented cases of advanced practitioners whose bodies, after death, escape what
else and do not decompose for some time-for two or three weeks or even longer. The aware
leaves their body is a primordial awareness that is not dependent upon the body. There hav
in the past of advanced practitioners remaining in meditation in this subtle state of conscious
died, and decomposition of their body was postponed although the body remained at room t
LEWIS JUDD: How would you know that their brain function had completely ceased?
DALAI LAMA: This would be good to check out with the instruments of Western science. Las
advanced practitioners, one of whom remained in that state without his body decomposing f

for about ten days. But unfortunately, on those two occasions there was no physician on har test. We have to make arrangements before such things happen. Hopefully, we will have eq available to fulfill this objective.

ALLAN HOBSON: There again, you see, skepticism would immediately try to imagine other same phenomena, namely that the brain might still be active at a low level. We know that th valid neuronal activity even when the EEG is absolutely flat. There still may be neurons dow stem which are firing. This happens, for example, in hibernation.

ROBERT LIVINGSTON: This is a difficult experiment. Western science has dealt with brain while. Brain death is very tricky to establish. Whether brain death can be established beyon doubt may be crucial as to whether you continue to provide life support for that individual, or that if you had a person dying in that way, it would be very difficult to decide when you might some level of "subtle awareness."

DALAI LAMA: The methods for realizing this state of awareness are set forth in Buddhist tre philosophy and meditation. We follow the methods and we see outward signs, but we can't t they indicate. What we see externally is that the meditator, who is well into the dying proces upright in meditation, with no physical movement, heartbeat or respiration. And he stays like ten days.

Prior to the cessation of breathing and heartbeat, the body is already degenerating becau But now, following the cessation of breathing and heartbeat, the metabolism, as far as we ca level, becomes restored somewhat. These interpretations are based on external observation

ALLAN HOBSON: And they are signs which imply the continuing existence of the body. We that the brain is probably still alive. You would say the practitioner's awareness persists in so not nonphysical way.

DALAI LAMA: Yes. You are saying that some part of the brain stem is still functioning?

ALLAN HOBSON: That is an alternative explanation.

LEWIS JUDD: It is a hypothesis that needs experimental testing.

DALAI LAMA: Good, let's do it!

* * *

DALAI LAMA: In Buddhism we speak of three types of phenomena: First, there are evident p perceived directly.

Second, there are slightly hidden phenomena, which are not accessible to immediate per differences of opinion on this even within Buddhist philosophy. Generally speaking, we think of phenomena can be known indirectly by inference. One example of something known by in anything arising in dependence upon causes and conditions is itself subject to disintegration change. This momentary change is not immediately evident to your senses. You can look at eyes, and it does not appear to be changing right now, but by inference you can know that it changing. This is an example of the second category of phenomena.

Third, there are very concealed phenomena, which cannot be known by either of the two

They can be known only by relying upon testimony of someone such as the Buddha.

Leaving aside the third category, do you as scientists accept the first two categories?

PATRICIA CHURCHLAND: The first two categories seem to be roughly the way Western sc
them.

ALLAN HOBSON: The more we know about phenomena, the less we need the third categor
that your knowledge about the first two categories, and especially the second, is limited to th
we impute the third category. As our knowledge of the second category grows, our need for
will diminish.

DALAI LAMA: The same could be said about the second category as well. If we can increas
things perceptually, then the second category diminishes.

ALLAN HOBSON: Absolutely. That's the task of science.

DALAI LAMA: This threefold categorization-in the Buddhist context- is not coming from some
differentiation among phenomena, but rather from the limitations of our capacity for awarene

For example, something that may be slightly concealed for me may be evident for anothe
occurring in my mind right now is to me evident, but for you it is concealed. Unless I tell you
the moment, there is no way for you to know. Apart from that testimony, there is no access t

PATRICIA CHURCHLAND: Yes, except that we can rely on other aspects of your behavior.
wincing or holding your jaw, I would infer that you had a toothache even if you didn't say so.
would be other aspects of your behavior, body language, and so on, that would give us infor
testimony is of course important but it is not decisive. You could be play acting.

ROBERT LIVINGSTON: It is the problem of a secret. You can hold a secret and nobody car

DALAI LAMA: Here is my point: What do we have to say right now about those phenomena
testimony, such as what I am thinking right now?

LARRY SQUIRE: That is a practical statement. Neuroscience would say that, in principle, w
technology, these things would become accessible-for example, if there were techniques by
fine structural activity in many parts of the brain directly and simultaneously.

ALLAN HOBSON: Let me give you one very strong example. I could tell that you were drear
didn't know you were dreaming.

DALAI LAMA: Can you tell what I am dreaming?

ALLAN HOBSON: Wait a minute, wait a minute, be patient!

ANTONIO DAMASIO: One could describe the agenda of science-what we want to do, and i
are already doing-is to reduce our reliance on that third category. It is obvious that we are n
complete this for a very long time, but what we want to do is to remove more and more issue
category and move them into the first two categories.

LEWIS JUDD: And from the category two into one. We are always pushing issues into categ
importance of science.

ANTONIO DAMASIO: The process is always shifting, based on better observations, better t
theory.

DALAI LAMA: I am speculating that perhaps as a result of increases in scientific understand
advances, things which might have been extremely concealed, as Buddhists talk about thes
even become clearly evident; for instance, like the earth being round. Centuries ago, if you b
would be only on the basis of testimony, because somebody said so. Now you can see it wit
pictures.

ROBERT LIVINGSTON: I can give you a concrete example of the progress of our learning a
and personality depend on detailed brain structures.

We studied scores of postmortem human brains, from people who had experienced no kn
psychiatric illnesses. By slicing whole brains at microscopically thin intervals and imaging ea
surface from a fixed camera position, we obtained motion pictures in perfect registration of e
surface all the way through each brain.

Examining these images, we found that the surface contours and internal structures are v
from each brain to any other. The differences we found are grossly obvious. There are twofo
areas of cortex that have important, discrete functions, and similar gross differences in subc
We found every brain to be unique, just as our faces are. But the differences in brain structu
meaningful in respect to perceptions, memory, motor and emotional skills, judgment, person
character.

We made computer reconstructions of one brain so that the principal structures could be
three-dimensionally and dynamically rotated and moved about for purposes of demonstratio
film. We believe that computers and suitably expanded memory management systems will a
quantitative comparisons to be made of differences in microscopic detail among many whole

Comparisons between detailed life histories and the detailed structures of the correspond
allow what our friends call "endophrenology." This technique would permit correlations betw
brain organization and human qualities of consciousness, perception, judgment, temperame
course, such data can also be used to compare magnetic resonance images of living brains
even more fascinating subjective correlations.

At some point we should be able to say that certain notably expanded structures in a par
suggest that this individual likely had great musical ability, and so forth. Perhaps by observin
structures that are especially noteworthy in certain remarkable individuals, we shall be able t
brain morphology that is characteristic of compassion. I confidently predict a branch of neuro
will disclose features of the human brain, presently largely concealed, that relate to both our
subjective and our outer worldly life experiences.

DALAI LAMA: Although it is difficult to pinpoint the physical base or location of awareness, it
most precious thing concealed within our brains. And it is something that the individual alone
experience. Each of us cherishes it highly, yet it is private.

ALLAN HOBSON: But then, when we share, if we dare, what is going on, it usually tends to
common. So what appears to us to be inevitably private is in fact quite generally shared.

ANTONIO DAMASIO: It is much more than that. It has tremendous commonality. It is interes

differences and similarities in both brains and minds, it depends on your perspective. On the
are differences in every brain. Each is unique. At the same time, they are generally similar. T
our spirits, we are remarkably similar in spirit. That is how you can have human sympathy, e
cross-cultural compassion.

11. Psychiatric Illnesses and Psychopharmacology Lewis L. Judd, M.D.

Lewis Judd is a psychiatrist whose research has focused on psychopharmacology: the effec
brain. At the time of this conference he was the director of the National Institute for Mental H
the primary federal agency concerned with the study of mental illnesses and providing leade
treatment of the mentally ill.

He presents an overview here of recent developments in his field: the growing understan
illnesses as biomedical disorders, the importance of noninvasive imaging techniques and ph
understanding, and the impact of a systematic classification of mental illnesses for diagnosti
treatment.

LEWIS JUDD: What I would like to do today is to give you a feeling for how our concept of m
developed, in this country and in the West more generally, a concept which has been underg
change during the last twenty-five years. I also want to give you a sense of our current ideas
field. I shall be very interested to learn from your side what commonalities might be shared w
medicine, which is so richly interwoven with Tibetan Buddhism.

The reason that we in the West have been undergoing a considerable shift in our unders
illness is because of some of the very things that you have been exposed to during the last c
The growth in brain sciences has had an important impact on our understanding of mental il
been an increasing trend within the field of mental illness to begin defining distinct entities of
illness and their specific characteristics. In addition, as an outgrowth from some of the brain
there has been a virtual explosion of information coming from the very important branch of p
as "psychopharmacology," which is the study of the effects of medications on brain and men
Another important recent influence is the growing understanding of the role of genetics as a
mental disorders.

Currently we see mental disorders very much the way we view medical illnesses. That is,
are essentially biomedical disorders that stem primarily from abnormal functions of the brain
convinced that mental illness in its seemingly infinite variety is made up of a series of highly
disorders that have their own characteristics, their own symptoms and signs, such that they
and diagnosed as independent entities with specific treatments. Further, we now are convin
the most significant and severe mental disorders are controlled, at least in part, by genetic in
will touch on each of these topics briefly and present some evidence as to how we have con
concept of mental disorders.

The neurosciences are obviously a relatively new branch of science, coming into full fruit thirty years. To give you an idea of how fast this area of science is growing, the Society for N started in this country in the early 1970s with 200 scientists. There are now over 15,000, and 15,000 in training, supported by funds from the National Institute for Mental Health and othe the federal government. Neuroscientific research is a major enterprise in this country, and it other Western countries. In fact, it is about to receive a major boost in the United States bec last two months the Congress, both the House of Representatives and the Senate, passed a declare 1990 as beginning the "Decade of the Brain." This is to launch a major national scie demystify through research what is certainly our most mysterious and complex organ systen national endeavor will be the equivalent, we hope, of going to the moon, but in this context, examining inner space.

Growth of knowledge in the field of neuroscience has been phenomenal. Our staff at the survey within the last six months in which we found that ninety percent of what we now know has been published within the last ten years. So we are on an accelerating curve of discover mind/ brain problems. As new findings have emerged, they have had a powerful impact on c mental illnesses, and on our understanding of mental disorders. Right now we are seeing th dysfunctions usually lie at the core of mental disorders. Much as someone with cardiac failu cardiovascular system, or someone with insulin-dependent diabetes has a diseased pancrea disorders have dysfunctional brain structures.

Thus, we are conceptualizing mental illness in ways very similar to those described by Dr he pointed out to you yesterday how highly specific insults to the brain create very discrete c way people perceive, memorize, and think. Except that the brain lesions of the mentally ill ar discrete or delimited. They are more diffuse in nature, often spread throughout a wide variet and still very elusive. Yet we believe that we are beginning to find definite evidence of releva present in the brain.

Noninvasive Imaging: A Window on the Brain

One of the technical developments that has helped us enormously has been the new capaci decade to get detailed pictures of the internal structures of the brain in living patients, withou the least harm. This gives us windows on the functioning brain and constitutes a major step been held back in our understanding of mental disorders for centuries, because we could no detailed information on brain function and structure that was sufficiently sophisticated and de address the kinds of functional abnormalities we encounter with mental disorders.

Dr. Judd illustrated his point with a series of magnetic resonance image (MRI) scans. The fir study of identical twins then being conducted at the National Institute of Mental Health. The the brains of pairs of identical twins, in which only one member of the pair was schizophreni

in terms of genetic inheritance, identical twins share about eighty-five percent of the same ch
material. The scan showed that in the twin afflicted with schizophrenia there was some loss
which had been filled in with cerebrospinal fluid from the ventricles.
LEWIS JUDD: Another MRI scan relates to a very severe disorder of children called autism.
syndrome, autism has been recognized since the 1940s. Originally it was attributed to cold,
parenting. We have now discovered, using imaging techniques which have recently become
autistic children there may be a lag in development of the cerebellum. This suggests that we
with a problem of poor parenting but with a severe developmental delay or arrest in this part
structure.

Autistic children have very late development of language, and sometimes they never dev
capabilities. They are often severely retarded intellectually. They do not relate well to the hu
environment. The diagnosis of autism designates a child who is independent and aloof, not i
human environment, not even with his parents and people the child knows well. An autistic c
fascinated with things, with mechanical devices.
DALAI LAMA: Is it possible to recover from this structural defect, to create normal functions?
LEWIS JUDD: In autistic children it is not. There may be some later structural development
but that is accompanied by minimal changes in the child's outlook and behavior. With medic
control certain behaviors of the child, such as self-destructiveness, but there is very little tha
done to rehabilitate the child in a comprehensive way.

I shall give you another example of how imaging techniques help us look at mental illness
previously had no evidence for abnormal brain structure or function. Using composite picture
obtained during dynamic changes in its function, we can show changes in blood flow from o
to another, indirect evidence of changes in biochemical or metabolic action. Nerve cells in th
primarily the simple sugar glucose, oxygen, and, in lesser amounts, amino acids. In this part
at the NIMH, we are measuring the actual shift in blood flow from one part of the brain to an
of normal individuals compared with a group of schizophrenic patients.

Schizophrenia is a profound disorder of the brain that results in severe problems of thinki
cognition. Schizophrenic patients suffer from incoherent thinking. Individuals may have delus
stable, false beliefs that they hold despite evidence to the contrary. They may also have hall
may hear voices, see things, or smell things that are not present. They often have a very diff
adapting and living in the world. Frequently, they cannot take care of themselves. They may
profound absence of feelings and emotions, or their feelings and emotions may be quite ina
they say may not be accompanied by appropriate expressions of feeling. They might, for exa
something very horrible and sad, yet laugh as they do so. Their speech, behavior, mood, an
be quite disparate and in-congruent. Schizophrenia is the most severe mental disorder that
It is most often a progressive disorder, the course slowly increasing downhill throughout the
individual. They may end up being very, very disabled after a few years.

The brain scans show that while resting, the brains of normal subjects and schizophrenic

alike. But they differ considerably when we ask each individual to perform a specific task tha
ability to abstract, an ability to solve problems, and an ability to remember. In the brains of n
individuals the pre-frontal cortex "lights up," indicating that there has been a major influx of b
that particular region. This shift of blood flow arises from the need to support increased neur
required to carry out those challenging thinking processes.

In the schizophrenic patients, however, there is essentially no change in blood flow to tha
quantitative information about regional blood flow allows us to focus on a specific region of t
schizophrenics that appears to be highly dysfunctional.

That is just an example. There are hundreds of studies of this nature that have establishe
irrefutably, that the seat of the schizophrenic problem, and many other major mental disorde
brain.

Classifying Mental Illnesses

Another major step in clinical research that has been advanced in part by findings in the neu
been the attempt to develop a detailed, accurate classification system, based upon empirica
accurate diagnostic criteria, to differentiate each of the many discrete expressions of mental
thick book10 contains detailed descriptions of mental disorders as conceptualized in the We
various clinical characteristics, signs and symptoms that one must identify in order to make a
diagnosis of one type of mental disorder or another.

Mental disorders are discrete. In pure form, they do not closely resemble one another. Th
systematically and manifest their own identifying characteristics. For example, here is a desc
depression. Perhaps the second most common group of mental disorders is what we call "m
which the most important one is major depression. Let us suppose that a clinician who is we
someone who tells him or her, "I am profoundly sad, blue, and dysphoric. I have been so for
doesn't change. I have problems in sleeping. I go to sleep, but I wake up every morning at tw
o'clock, and can't get back to sleep. I have lost my appetite. I have lost considerable weight,
fifteen percent of my normal weight. I am unable to think and concentrate at the level that I u
problem every day. I have low energy. I can't accomplish anything. I am besieged with thoug
dying and suicide."

The clinician knows almost immediately that, according to this accumulated cluster of sym
individual suffers from major depression. This classification system helps him to confirm that
it tells him, in addition, once the diagnosis is made, what means he has by which to respond
like so many other mental disorders, won't go away rapidly by itself. Major depression, if unt
about nine or ten months. If major depression is treated appropriately, the physician can usu
rather quickly. So this diagnostic codification has made, we believe, a major contribution to o
understanding and ability to respond to a spectrum of mental disorders.

Because of the accuracy of classification, and because we can thereby better train peopl accurately and recognize various mental disorders, three years ago the NIMH conducted a r of mental disorders existing in the U.S. population. We examined door-to-door a sample of a brackets, representative of both urban and rural areas. A total of 18,000 persons participate research-structured diagnostic interviews. What we found was something that I think those c clinicians already knew. Mental disorders, rather than being rare diseases, are very commor common category of diseases that mankind experiences. We found that between twelve and those interviewed had already experienced some recognizable mental disorder. They were, have been patients. So the scope of mental disorders in the United States has now been est quantitatively for the first time. Since this was a household survey, it defines a major public h problem.

DALAI LAMA: I am impressed by the numbers. The percentage seems quite high. Perhaps included in that survey!

LEWIS JUDD: One in ten, approximately. Moreover, we found that in terms of projecting life percentage actually rises to twenty percent. That indicates that one in five persons, at least i States, will have a serious, diagnosable, and treatable mental disorder some time during the are serious, common mental disorders that are of major public health importance. We are be forward to address that problem full scale.

Advances in Psychopharmacology

In addition, paralleling this advance, there have been developments in the field of psychopha is my area of research. It involves attempting to find medications that can help treat and imp conditions. For example, we now have available in the West more than thirty medications th antidepressants, useful in treating people. This spectrum of medications is so broad, effectiv fundamentally sophisticated, that we can now manage to treat effectively eighty-five percent disorders that gain the attention of trained clinicians.

DALAI LAMA: In the case of people who are depressed, are there not occasionally valid rea depressed, as when they reflect on certain tragedies and misfortunes, whether true or untru of their reflections or for some other reason, they get depressed, would this medication reall their depression?

LEWIS JUDD: First of all, antidepressants don't treat unhappiness. Antidepressants are high correct major depression, the syndrome I described which, in our view, is a clinically significa disorder with a variety of well-defined characteristics.

DALAI LAMA: Isn't it possible that a mental affliction clinically identified as depression could sustained thinking on some unfortunate circumstance? Doesn't that happen?

LEWIS JUDD: Absolutely, but it doesn't matter. We are looking at a continuum of biological

believe that virtually anybody can develop a major clinical depression. We know, or at least
that some people who develop depressive disorders inherit a genetic vulnerability to do so.
susceptible cases, it doesn't take much provocation in the environment to trigger a major de
are others who don't have that vulnerability, who almost seem almost immune to depression
to all kinds of terrible things without becoming depressed, but still they can become depress
enormous accumulation of untoward, unprecedented, or tragic events in their lives.

What we are finding is that once you develop a clinical manifestation of a major depressi
matter much what has caused it. Once a person becomes depressed, then that condition ne
specifically or it will persist for nine or ten months, or longer.

DALAI LAMA: Does major depression arise initially from some external cause that brings ab
in the brain, leading to the symptoms, or, alternatively, is the original cause found in the brai
illness is just triggered by something from the environment?

LEWIS JUDD: There probably is room in the model for both types. However, conceptually, I
at this as a genetic/ environmental interaction. Let us suppose that someone has a very, ver
propensity for developing depression. It may look as though the depression is being triggere
independent of what is happening in their environment. However, if you go back and look ca
happened to the person just before he or she began to show symptoms, you can always find
"assault," perhaps subtle things, that may have triggered the depression. Because that pers
developing depression is so low, it doesn't take much. So I would say, it takes two to tango-
vulnerability and an environmental stressor. Major depression is a complex interaction betw
constitutional givens, and environmental events that elaborate and precipitate manifestation
depressive disorder.

ROBERT LIVINGSTON: Lew, if I understood you correctly, you said you had something like
of medications that are helpful in coping with this syndrome of depression.

LEWIS JUDD: That's correct. There have really been almost three generations of antidepres
of these generations has been more sophisticated and specific than the others. So, as I say
about eighty-five percent of all depressive disorders. Certainly, in this country, you need not
from a depressive disorder. We can absolutely manage this problem for the vast majority of

LARRY SQUIRE: It might help to clarify to what extent Western science says that the drug is
choice, as opposed to improved understanding as the form of treatment.

LEWIS JUDD: First of all, I have been talking this far exclusively about medications that help
disorders. But many medications are given to patients as a part of an interactive healing rela
physician and patient. Any dispensing of medications has to be couched as part of a credibl
transactional education about the illness from the patient to the physician and from the phys
patient. Also, for some cases of depression, it is appropriate that we apply certain forms of p
that have been designed specifically to deal with individuals who have depressive disorders

We are finding that if you give a patient with severe major depression psychotherapy only
not very effective. But, psychotherapy can be very helpful for less severely ill patients with c

depression. If you give medications only to severely depressed patients, it will help more tha of such patients. But, if you combine psychotherapy of a specific nature with the dispensing medication, you raise that rate of relief even further. This is evidence that there may be a sy effect between psychopharmacology and specific forms of psychotherapy.

At present, we are convinced that this should not be an either/or therapeutic approach: e appropriate medication or an appropriate kind of psychotherapeutic/educational transaction. works best when these are combined. Certainly there is a tendency in this disorder for symp high proportion of those who develop a depression will have at least one other depression. V suffer repeated recurrences of depression, psychotherapy during the interval when sympton will reduce the likelihood of further recurrence.

DALAI LAMA: Is continuing the medication by itself not helpful for lowering the repeat rate?

LEWIS JUDD: Medication maintained at the appropriate dose level is also very helpful. But, patients can be educated to avoid certain kinds of circumstances that are especially problem to manage such circumstances better so that they don't find themselves being stressed and assaulted in ways that may bring on depression.

DALAI LAMA: Of the two causes-physical disorder of the brain and exposure to distressing c tends to be the initial cause? Is thinking about tragic circumstances the dominant cause?

LEWIS JUDD: Yes, it might be so. I think our experience indicates that depressive disorders sustained and potentially prevented by means of influential techniques that might be applied managing one's environment.

DALAI LAMA: Leaving aside the question of moral and ethical values, have there been case had one brain image taken at the initial onset of depression, and another at a later time with medications? Has it been possible to observe brain changes while the depression is develop

LEWIS JUDD: That has at this point not been done.

DALAI LAMA: You can do this with animals?

LEWIS JUDD: There are models for depression in animals that are experimentally manipula we use right now, which we think is analogous to depression in humans, is called "learned h put the animal into a situation where basically it can't win, and then soon the animal gives up lethargic, as if it were depressed. We have studied the brain chemistry of animals in such sta some highly specific things. However, it is not clear whether this is exactly equivalent to a de disorder in humans

The Genetic Inheritance of Mental Illness

Let me now present an example of a disorder that appears to be more regulated by inheritan by environmental interaction. There is a very serious disease that has, according to virtually that's been done in other cultures and in other countries, a prevalence rate that is almost ide

what we are finding in the United States. Even though no other country has done the extens study that we have done nationally, the fact is that smaller studies elsewhere provide data th similar.

The disorder I'm talking about is manic-depressive illness, which attacks around one to tw the adult population. In the United States there are probably two and half million people with manic-depressive disorder. These are individuals for whom it runs in their family. There are genetic factors in this disorder.

People with manic-depressive illness experience intense periods of depression, lasting a to eight months, followed by a period of symptom quiescence, and then maybe a period of w behavior, which is the opposite of depression.

This involves an intense agitated elation, euphoria, grandiosity, irritability, lack of need fo boundless energy, and very poor social judgment.

These manic-depressive individuals have an average of five to eight episodes lasting fro months each time throughout their lifetime. Sometimes they may have as many as fifty to six total. These episodes appear to attack people almost out of the blue. Once initiated, sympto locked in, lasting for a roughly predictable period of time.

We have discovered a medication that is highly specific for this disorder: lithium, one of th elements found in the human body. Now, if you trace the natural course of the manic-depres patient before and after they have undertaken a course of lithium treatment, there is a phenc Before we had lithium, manic-depressive patients spent approximately twenty-five percent o in hospitals. They spent an additional twenty-five percent of their lives going into and coming episodes. So it cost them roughly half their adult lives. Lithium was introduced as a medicati country relatively recently, being approved by the Food and Drug Administration in 1969. We that the introduction of that one drug alone, in this country has saved $39 billion in costs ove twenty years: $12 billion in elimination of the need for hospitalization, and $27 billion in reco productivity among individuals who were previously highly disordered and disabled and who productive lives. What we have discovered through studies on manic-depressive psychosis the first time-between a highly specific diagnosis, a specific medication, and a predictable cl

One of the most exciting areas of genetics has been discovered from population genetics pedigree studies, for example, from twin studies. This relates to both manic-depressive illnes schizophrenia, both being mental disorders that run in families. If one identical twin has schi likelihood of the other twin having schizophrenia is about thirty-five to forty-five percent. It is thirty-five times more likely to occur in the twin of a person who has schizophrenia than it wo normal population, so there is a strong genetic preponderance.

We have been looking for families in which there is a genetic concentration of disorders. beginning to develop family pedigrees to track the offspring of parents with schizophrenia. In example, where one of the parents had schizophrenia, among their eleven offspring there w schizophrenia. Among their grandchildren, there were two. We are now on the lookout for fa

to study their genetics, to analyze their chromosomes, and to find out whether we can identi
the chromosomes that are potentially responsible for at least a predisposition to these illnes
DALAI LAMA: In terms of hereditary diseases, if the illness is on the fathers side, is there ev
boy or the girl from the family will be more likely to inherit that disease?
LEWIS JUDD: It depends on whether the inheritance is sex-linked. If it is linked to the sex o
then it would reveal a preponderance effect on the son or daughter. For example, in major d
a two to one preponderance of women over men. In manic-depressive disorder, women are
than men, but it is almost even. In schizophrenia, it is evenly divided between the sexes.

We know in manic-depressive illness that it is genetically transmitted. We strongly suspe
also true in schizophrenia. There may be other disorders that we are now finding that may b
linked, like obsessive-compulsive disorders, and certain forms of anxiety disorder.

* * *

LEWIS JUDD: I have a question. The way we in the West presently think about mental diso
deterministic. For example, in an extreme case, with a high genetic tendency, in an environ
elaborate stresses, it is inevitable that someone will develop a mental disorder at some poin
account, we are becoming increasingly less judgmental about the appearance of mental dis
disinclined to attribute them to past failures or to emotional weaknesses and various other fa

What are the Buddhist conceptions of mental disorders? Is there attribution to some type
self, or failure of enlightenment, or failure of centeredness, that would result in a mental diso
an increase of wind or whatever other humor might be involved?
DALAI LAMA: As I mentioned previously, from a Buddhist perspective we think of conscious
they are subjectively experienced. Within this context, then, if a person is experiencing some
dysfunction, it is frequently understood that the mind itself has become too withdrawn in upo
that there is a corresponding physiological process involving the energies themselves, which
associated with consciousness, also entering into a dysfunctional state.

So, in the Buddhist view, it can happen, for example, that one's mind will become depres
some environmental event. As a result of the mind becoming depressed, there is a chemica
electrochemical, transformation in the brain that has now occurred. The mental dysfunction
aggravated. When that happens, there is a further chemical response, which then avalanche
is the Buddhist view, simply stated. It was with this in mind that I was asking previously, whi
greater dominance, external circumstances, or internal ones?

Additionally, in the Buddhist view-and similarly in Western interpretations-on occasion, w
special external event taking place, there can simply be a dysfunction or disruption in the ba
elements within the body. In that event, the internal circumstances are the dominant, princip
dependence upon this physiological cause then, the mind can become depressed.
LEWIS JUDD: I was inquiring about something else as well. In Western society, having a m
still highly stigmatized. Someone is essentially at fault. They have presumably done someth
of this cultural attitude, oftentimes people are ashamed, and unable or unwilling to seek help

similar kind of pejorative social conception that affects the mentally ill in Tibet or India?
DALAI LAMA: It is more an individual matter. In a Buddhist culture, you have some who resp
and you have others who do not respond with compassion.

12. The Limits of Intervention

As our understanding of the relationship between the mind and the brain grows, technologie
knowledge have profound implications for mental health. But even as it grows, our understa
a small fraction of the brain's complexity. Is it possible from this limited viewpoint to judge th
and ethical boundaries of future technologies?
DALAI LAMA: The preceding discussions seem to indicate that specific mental functions, co
otherwise, are dependent on or are very closely related to specific regions, functions, and st
brain. This being the case, as neurosciences and biomedical technology develop and progre
that it will be possible to modify the brain so that certain types of conceptual processes and
do not arise, or that others can be readily introduced or enhanced? Theoretically speaking, c
PATRICIA CHURCHLAND: It is very hard to speculate about what the future is going to be l
you really did know in great detail where and how everything was happening in the brain, th
could intervene to change things that you wanted to change either directly or through some
intervention. I guess it might be less possible to do so through drugs than to do so directly, i
some sort of patterned electrical stimulation. We are talking about changing specific concep
DALAI LAMA: Or conceptual processes, not just thoughts.
PATRICIA CHURCHLAND: I see, then I suppose you might also do it by changing the gene
that had certain kinds of circuits that we don't now have.
DALAI LAMA: Is it your understanding that there is one discrete part of the brain that is princ
responsible for a certain kind of mental state or function? Even if that is the case, that part w
presumably not be capable of operating in isolation, but only in interrelationship with the rem
brain?
LARRY SQUIRE: I think the neurosciences' consensus now would be that higher brain state
attitudes and ideas, are dependent upon very complex patterned activities in different parts
so it would be very difficult to imagine how one could ever direct changes by intervention. Ra
pattern in representing a certain thought or an idea has a certain stability to it. The brain has
patterns, and the best way to get to that pattern would be from a preceding pattern, which w
leading thought, attitude, or idea.
ALLAN HOBSON: As a psychotherapist, I think it important here to distinguish the very robu
physical interventions that modify vulnerability to disease-and the clearly established need t
develop rational treatments. But projecting into the future, I would agree with Larry Squire's
best way to change ideas is to change ideas. And it doesn't seem likely, in my view, that in t

future we will have a physical way of isolating a particular ideational set and changing it, che
example. Nor do I think that is even desirable.
LEWIS JUDD: If you had such capability, you would not be warranted ethically to use it.
ALLAN HOBSON: Right. The point is that the system is clearly open to interventions of two
One is a biological intervention, the other is a conceptual intervention. The human brain is re
that it has these apparently dual aspects which probably represent higher order complexities
structural/functional system.
LEWIS JUDD: No matter how capable we become, no matter with what finesse we might int
chemical agents, or at what patterned complexity we might introduce electrical stimuli or inje
neurotransmitters, or enter certain genetic influences with fibroblast viral vectors and things
doubt that we will ever be able to engineer any kind of intervention relating to a strategy of th
will certainly never get to a point where we can be so specific that we could actually isolate,
eradicate ideas or concepts.
PATRICIA CHURCHLAND: I don't think we know that we will never get to that point. It was p
years ago that people said that you will never be able to engineer any genetically new organ
ALLAN HOBSON: That's true.
LEWIS JUDD: I think it is remote. I don't think intervention will ever be that specific or that ge
detailed.
* * *
DALAI LAMA: Can you anticipate a time in the development of your science that you will be
your knowledge of an individual's brain, to know whether this person will be hot-tempered or
happy or depressed, or be intelligent or dull, purely in dependence upon your understanding
ANTONIO DAMASIO: Theoretically, I think that is perfectly possible. It is not likely to happen
lifetime, but theoretically, yes.
LEWIS JUDD: It certainly is within the realm of probability.
DALAI LAMA: As you continue to progress in the neurosciences, do you think it is possible t
investigating a person's brain you will know what that person is thinking of at the moment?
PATRICIA CHURCHLAND: I think that is going to be very difficult for technical reasons, but
principle, in theory.
ANTONIO DAMASIO: Theoretically possible, but rather unfeasible. DALAI LAMA: But it is p
PATRICIA CHURCHLAND: Theoretically possible, but you would have to know not only wha
parts of that person's brain simultaneously and sequentially, but also something about the e
quite a lot about that person's history.
DALAI LAMA: Up to this time, what percentage of the functioning of the brain do we underst
ROBERT LIVINGSTON: Half of one percent.
ANTONIO DAMASIO: I would say more than that.
LEWIS JUDD: I am not sure. I think we have barely scratched the surface.
PATRICIA CHURCHLAND: If you want to know how the neurons are put together in circuits

something like perception or being able to move appropriately, then we have got part of the
things, but we don't really understand how the brain performs such functions in its character
integrative fashion.
LARRY SQUIRE: I think at the level of gross functions, we understand a lot. We can talk, as
about memory and about vision. But one test of our understanding would certainly be: Can w
computations and put them into a computer so the computer can see or make a decision or
into print without a helper. We can not yet do any of those things. So, obviously, we don't un
great detail how the brain is doing such things.
ANTONIO DAMASIO: That may be just not understanding the details. Half of one percent is
think that in terms of mechanisms we understand a bit more. If we can't implement it on a m
mean that we fail in understanding. There is a hardware problem that we obviously cannot p
because it has to do with the evolution of biological systems. So maybe we understand a bit
reflected in our capability of implementing our understanding in machines.
LEWIS JUDD: But also, the more we understand, the more it is very clear what we really do
say that there is an exponential increase in the absence of knowledge.

13. A Buddhist Deconstruction of the Mind's Self

A fundamental tenet of Buddhism is the lack of inherent existence of phenomena, including
understanding of things as substantial is an illusion, for they exist truly only as dependency r
Various dialectic approaches have developed in Tibetan Buddhism, designed to challenge a
dismantle our reified view of reality. The Dalai Lama several times tries to pursue this type o
enquiry with the scientists. He seems to be interested in the possibility that a scientific under
the brains processes might lead to a similar deconstruction of illusion.
DALAI LAMA: I would like to know whether, as scientists conducting neuroscientific research
laboratories, you ever have a spontaneous feeling of affection for the brain itself as you norm
living beings as persons? Do you ever have that kind of feeling?
LARRY SQUIRE: Sure.
PATRICIA CHURCHLAND: Yes.
ROBERT LIVINGSTON: Absolutely, yes.
LEWIS JUDD: Highly admire it.
DALAI LAMA: Even though we might like certain plants such as these flowers, or this table,
whatever else we may consider precious, that kind of feeling is very different from the feeling
or love that you have toward another human being. Underlying that feeling is a very persona
that individual person. Do you ever get that feeling of personal affection when you are lookin
ANTONIO DAMASIO: That's different.
DALAI LAMA: Is the kind of affection and love that we feel toward another person, as a pers

illusion?
ANTONIO DAMASIO: I would say no.
DALAI LAMA: As a result of scientific investigations, we have more or less refuted the notion existent self. You can't find a soul, or a human being. You can find the human body, but you human being per se, the person qua person, the entity for which we feel compassion and af find consciousness or awareness apart from the brain. So is our affection and love toward a person baseless? Is that affection, love, and compassion focused upon a nonentity?
ALLAN HOBSON: Brain science is inadequate. Neuroscience is only thirty years old. I believ can envisage a time when our knowledge of brains would be elevated to that level. If you im slope of progress, and the increase in complexity of function which we only recently have co in terms of detailed and comprehensive brain mechanisms, then I can envisage a time at wh including human affection, and the entire individual personality of a particular brain, will be re
DALAI LAMA: Would you fall in love with it?
ALLAN HOBSON: You would certainly feel compassion.
LEWIS JUDD: But you would not relate to a brain as you would relate to a person. That is re
DALAI LAMA: This would imply that when a person experiences affection and love for anoth who is experiencing affection and love has a philosophical notion that the other individual co being or perhaps has a soul. That would be the implication.

If you understood the complexity of the brain to such a degree, is it possible for you to ha response to a brain?
ALLAN HOBSON: He is saying there is something more to the brain than its organic constitu such is likely to be discovered through progress in brain science.
In fact, this is not at all what His Holiness intends by this line of argument, as will eventually clear.
ANTONIO DAMASIO: We need to answer the first question which was whether or not, work feel affection toward the brain. That's the way I interpret your question. Can we feel affection instance, for material that we are working with, such as an image of the brain, or a slice of th answer to that is no, at least in my view. What I can feel affection for is a particular individua whom I know.

I should like to tell you a little bit about my experience in that respect. The older I get, the feel a great affection and compassion for those individuals who have suffered brain damage subjects in our research. And that feeling is something quite powerful. In fact, in our laborato these individuals as our friends. They are very precious human beings and we grieve over th when I look at sections of their brains as taken in life by MRI scanning, or actual sections of taken postmortem, I don't feel any affection whatsoever. I am interested in these sections es much the same way that I am interested in paintings. And also, particularly, because the bra provide very rich information for my work, for my thinking. But no, I don't relate with affection such artifacts. In fact, to be quite truthful, I relate to them somewhat less affectionately than

paintings.
DALAI LAMA: In order to save the life of a particular human being, suppose that we underta
that person's brain or some other part of the body. We may actually cut out some small, dan
brain. You have no compassion for that part, although it is properly identified as a part of tha
brain. Why is the affection missing? Is it because we took that possibly offending part out, in
the life of that person?

Now, you know there exists a person, but if we investigate in a reductionist manner, whe
that person? What is the human being that you have feelings for? Is that the body? Is that th
suppose that the brain is the one thing which we consider to be the proper owner of the bod
brain, mind, soul seem to be essential, whether they all exist or not.
ROBERT LIVINGSTON: I have a suggestion here, Your Holiness. This goes back to our inte
contemporary of the Buddha, Hippocrates. Greek physicians in the Hippocratic tradition hel
between a doctor and a patient is a "Contract of Philia," or mutual friendship, a contract that
mutual trust and affection. What this patient/physician contract means is that when a physici
someone who requests or otherwise exhibits a need for health advice or care-and this is abs
limits of age, sex, nationality, creed, or philosophy-the physician has a professional obligatio
whatever he or she can for that person. If the patient consciously acknowledges the physicia
his or her help, then the bilaterality, the mutuality of the contractual relation of friendship goe
automatically into effect. The physician, on the basis of that Contract of Philia, must do every
patient that he would do for a friend, and he must not do anything to that patient that he wou
friend. In other words, patients are not just diagnostic or therapeutic problems.
LEWIS JUDD: The point is, the physician is dedicating his or her knowledge and skills on be
as a totality, as a person, not to some fractional part or organ system. The patient is not just
liver or diseased brain, or whatever. The patient is an integrated, whole person.
DALAI LAMA: That's it. You can amputate the person's arms and legs, yet you know the per
even without arms or legs.
PATRICIA CHURCHLAND: Are you exploring this as an argument for believing that there is
DALAI LAMA: No, that's not the case. Buddhists don't accept that there is a soul. There is a
approach used in Buddhism in which you do not find the self, that is, you find only emptiness
an intrinsic self is emptiness, and emptiness is something to be realized. It is not designed to
soul. But we do designate a self. There is a conceptual designation of the self, which relates
to the mind. But it is not something you can localize through reductionist analysis.
ALAN WALLACE: I think the question here that was being asked previously and was not rea
say that no such thing as a self, or a "soul" that exists in and of itself, and moreover, if there
thing as a mind existing apart from brain and brain states, can we feel compassion toward a
states? If we cannot, then is compassion itself a deluded state of mind, inasmuch as you are
compassion toward a nonentity?
ANTONIO DAMASIO: In that case, I would say, yes. In that sense, we are generally taking t

a brain and a body. We can usefully return to the metaphor I used yesterday, which is that h
brains that have a body on their backs. Bodies are intimately and constantly connected to th
represented there.
LEWIS JUDD: They are a person as well.
ANTONIO DAMASIO: The person is a totality.
DALAI LAMA: There is a principle you have introduced and that is the disparity between rea
appearances. Do you think this pertains and that there is an appearance of a person, but in
entity exists?
PATRICIA CHURCHLAND: Yes. At least there is an appearance of a mind, or of a self, but t
There is an appearance of a flat earth, but it is no such thing.
LEWIS JUDD: It is an aggregation of functions.
PATRICIA CHURCHLAND: It is also true that His Holiness introduced an interesting parado
think of the person as a brain, and yet, we can cut out a part of the brain and say, well, that
part of the person, and for any part of the brain, we could cut it out and say the same, then h
person's "self" be the outcome of brain activity?
ALLAN HOBSON: Don't take out too much!
PATRICIA CHURCHLAND: I think that's right. The story is going to have to be, "Don't take c
any given small part, you wouldn't want to identify the "self" with that part. But the brain cons
distributed collection of integrated parts. And you can disturb it a bit. But, of course, if you ta
much, then you don't any longer have this behaving/interacting/speaking thing for which you
affection, or which you regard as a person, a self.
* * *
DALAI LAMA: According to one system of Buddhist philosophy,11 it is said that there are tw
phenomena. The first type consists of things that can perform functions, and they are though
in their own right. They arise in dependence upon causes and conditions and they produce
this same system, there is another type of phenomena which exists purely as a result of con
conceptual designations: for example, the borderlines of one country with others. These are
conventions, pure constructions that exist only because of agreement, and are not capable
function. In this philosophy, a certain category of such phenomena is the mere absence of a
For example, there is no plant on the palm of my hand. The absence of this plant-
ROBERT LIVINGSTON: There are plants there, though. There are fungi, proper plants, whic
skin.
PATRICIA CHURCHLAND: There are no daffodils there.
DALAI LAMA: No daffodils. There is an absence here of daffodils. That absence is just a co
So the question would be, does that mental construct exist? Maybe this is a metaphysical qu
never talks about.
PATRICIA CHURCHLAND: It is true that there is an absence of daffodils in my hand.
DALAI LAMA: Is that absence of daffodils existent or not?

PATRICIA CHURCHLAND: It is not a thing that exists. An absence of something is not a thi
with something. On the other hand, at least in English, we would say that it is true there is n
there. There could be; in fact, I could imagine a glorious bunch of daffodils there, but the abs
thing is not a thing.
LEWIS JUDD: But it exists in your mind as you think about it.
PATRICIA CHURCHLAND: I said you could imagine it. But there is a Zeno-style paradox co
saying, "Nobody runs faster than Sarah" and then concluding that there is a thing, namely n
faster than Sarah.
DALAI LAMA: This relates back to the system of Buddhist philosophy that distinguishes thin
functions from conceptual constructions, like the absence of daffodils in my hand. So the qu
the very absence of a daffodil exist, albeit, not as a thing?
PATRICIA CHURCHLAND: The thought of it can exist, and the thought of it can be identifie
DALAI LAMA: Thought? But is the absence itself a thing?
PATRICIA CHURCHLAND: This is a semantic fuddle, like saying "nothing" is a thing!
LEWIS JUDD: Don't step into the pit!
PATRICIA CHURCHLAND: That's why I keep resisting. It is not a thing but, certainly, its abs
DALAI LAMA: What about certain properties like a dynamic process, the ever-changing natu
not tangible, it is not visible.
PATRICIA CHURCHLAND: How about water heating and getting hotter and hotter? There is
DALAI LAMA: The change of temperature of water. So take water as the entity that has the
take fire as the entity that has the quality of change. The property of change is something th
water or in the fire. Take this entity of change-is it findable?
PATRICIA CHURCHLAND: If you mean by change, a thing in itself, no. It is a process. It is s
on, so that the fire changes. But we don't want to think of it as... this is getting into Zeno terri
again. It is really a matter of wordplay.
DALAI LAMA: What is this property of change? Is it a thing, material or otherwise, or is it not
question.
PATRICIA CHURCHLAND: It depends on how you want to think about it.
DALAI LAMA: When we asked about the absence of daffodils on my palm, you said it was n
PATRICIA CHURCHLAND: True.
DALAI LAMA: There are absences.
PATRICIA CHURCHLAND: There are absences.
DALAI LAMA: It does exist, but it is not there. The property of change, is it a thing as you de
PATRICIA CHURCHLAND: No. There are changes. Things change. But change is not a thi
object.
LEWIS JUDD: But is it not a property of the object that is exhibiting the process of change?
PATRICIA CHURCHLAND: I think what we are looking for are properties of fire, or propertie
or properties of elements, or properties of brains. But we are not looking for the property of c

because there isn't any such object.
DALAI LAMA: For the sake of clarification of terminology, does a "thing" have to be a materi
PATRICIA CHURCHLAND: Not by definition, not if, in actual fact, if there are nonmaterial ph
example, spiritual phenomena or ghosts. However, spirits and ghosts do not appear really to
DALAI LAMA: In your belief system, are there things that are nonmaterial?
PATRICIA CHURCHLAND: I think the only things that there are, are physical things. That is
and so on. But I could be wrong.
ANTONIO DAMASIO: To follow-up in relation to the issue of the absence of daffodils, or the
changing temperature, you should not talk about those descriptions as things. But you can n
understand the mechanisms that lead to such experiential events or states. And you can des
account for them by reduction to a different level of reality. For instance, you can explain wh
changes in the temperature of water by knowing what is happening to the molecules of wate
why, for example, water coming from on high can move a wheel during its fall. So you can e
which lead to change. But you cannot talk about them as things. You can talk about them as
be described.
ALLAN HOBSON: But they are patterns of things.
ANTONIO DAMASIO: They are patterns created by things.
LEWIS JUDD: They are ice crystals.
DALAI LAMA: Did you say patterns are not things? Can you say definitely, within the scientif
something exists it should be findable under analysis? That is, if you seek it out, you should
it?
ANTONIO DAMASIO: If you get to the proper level of analysis.
PATRICIA CHURCHLAND: It may be difficult technically. But if it does exist, then there shou
either indirectly, as in the case of electrons, or directly, of being able to get a fix on them. Ho
would not believe something were real in the absence of empirical evidence.
DALAI LAMA: Just as in science, so within Buddhism.

14. In Conclusion: Building Bridges

ROBERT LIVINGSTON: Your Holiness, I should like to begin with a little story. When I first v
Francisco, the Golden Gate and Oakland/San Francisco Bay Bridges were being built. Peop
idea of having rapid two-way exchanges across the bay. Specialists studied where to locate
experts, like Willis Bailey at Stanford, forewarned that the Golden Gate Bridge would likely fa
an earthquake because its foundations would be based on serpentine rocks, unstable under
forces. Nevertheless, given public authority and the will to proceed, engineers built huge fou
anchorages for the suspension systems. They then had tug boats pull two wires from shore
bridge. When those tenuous threads had been lofted and secured in place, mechanical shut

themselves back and forth, eventually spinning and sheaving enormous cables from which v
roadways were suspended.

We are engaged in similar teamwork, and expect similarly exciting and progressive deve
advantages from facilitated two-way exchanges. Within our respective traditions, each side l
chary and perhaps condescending in evaluating the enormous philosophical, psychological,
contributions made by these two disparate conceptions of reality.

You nonetheless have expressed personal interest in bridging the gap between the theor
practical knowledge resources of Buddhism and Western life sciences. Fortunately, the idea
appeals to resourceful constituents on both sides. The most significant fact is that both sides
originally founded on the principle that if there is substantial evidence to refute existing assu
hypotheses-no matter how long established and widely believed these may be-verifiable evi
them with new explanations. This ensures the progressiveness that distinguishes Buddhist a
scientific traditions from most ideologies.

At the first Mind and Life Conference, some tenuous threads were strung across. But we
established foundations for deciding what may be the most fruitful questions to ask of one a
experiments might contribute most effectively to mutual progress, and how we should go ab
another's evidence.

DALAI LAMA: Two years ago we had the first Mind and Life dialogue. We have then and no
with different possible approaches and possible grounds for future dialogues. Sometime in t
be quite beneficial if we could concentrate on certain points raised in these two Mind and Lif
these meetings, points are raised which open new possibilities for pursuing more in-depth re
research with precision instruments. With experimental investigation of some of these points
obtain better evidence and a deeper understanding. The subjects for such research must be
scholars but rather practitioners who have some contemplative experience. In the past, som
have visited laboratories in which their bodily responses were measured. Dr. Benson, for ex
physiological tests and found that extra energy is mobilized during meditation. Thus meditati
gave rise to biological changes within the body. So, I suggest that we proceed like that. I thi
might get a clearer picture, for the scientists as well. Experiment on capable practitioners to
mental states and brain functions-I think maybe that could yield interesting results. Perhaps
lead to more questions being raised as well as some being answered. I think that's the path
it?

We have had two dialogues now on Mind and Life that have been fairly diverse in the top
explored. What I would like to do in the future is to pinpoint one topic and really come up wit
further research that are more clearly channeled and focused. This is more an objective for
consideration than for me to decide. It is for us to decide among ourselves.

There is another point I should mention. I always believe that each individual human bein
of responsibility for humanity as a whole. Particularly, I always believe that as scientists, you
special responsibility. Besides your own profession, you have a basic motivation to serve hu

produce better, happier human beings. Whether we understand consciousness or not, we m
persons. That is important. I want to express that. Whenever I meet scientists, I always have

Through my own profession, I try my best to contribute as much as I can. This proceeds
concerned whether another person agrees with my philosophy or not. Some people may be
belief, my philosophy, but I feel alright. So long as I see that a human being suffers or has n
contribute as much as I can to contribute to their benefit. Scientists and medically qualified p
contribute especially. That's different; that's a particular context. A human being needs to be
according to your professional calling. You can contribute; that's your shared professional re

Especially now in the twentieth century, I think the scientists' role is important and urgent
evidence and explanations can make something that is unseen into something that becomes
understandable. In contrast, explanations, arguments, and interpretations of mind and life th
traditions recommend tend to be based more on subjective experience and advocacy. A sci
usually be objectified and shared on the basis of instrumental evidence that can detect and
otherwise obscure. This makes the scientific explanation more tangible and cognizable than
explanation that may be mainly derived from introspective experiences. A scientific explanat
would be more effective.

From within the scientists' circle, it is not clear whether affection and compassion are illus
real. Often we cannot specifically pinpoint the objects of our compassion, of our projected ki
objects of our affection. Anyway, having compassion is something very important throughou
isn't it? Whether compassion has an independent existence within the self or not, compassio
daily life, I think, the foundation of human hope, the source and assurance of our human futu

15. Afterword: Buddhist Reflections -- B. Alan Wallace

Due to the unusual brevity of this Mind and Life Conference, which lasted two days instead
for all the other meetings in this series, Robert Livingston asked me to write a concluding es
further context and elucidation of the Buddhist topics raised here by the Dalai Lama. The fol
attempt to fulfill that wish, principally setting forth certain Buddhist perspectives on the mind/
problem, and at times viewing modern scientific assertions in light of the Buddhist world view
motivation in doing so is not to demonstrate the superiority of one view over the other, but to
avenues of theoretical and empirical research to scientists and Buddhists alike. For there are
increasing number of people today who, like myself, feel that modern neuroscience and Buc
deal to learn from each other. Neither has sole access to exploring the true nature of the mi

The Reality of Suffering

The fundamental structure of Buddhism as a whole is known as the Four Noble Truths. All B practices are presented within the context of these four, namely the reality of suffering, the r sources of suffering, the reality of the cessation of suffering together with its underlying caus finally the reality of the path to such cessation. The Buddha's injunctions regarding these fou should recognize the reality of suffering, eliminate the sources of suffering, accomplish the c suffering, and follow the path leading to cessation.

Buddhism identifies two kinds of suffering: physical and mental. The two are not identical experientially apparent that one may be physically uncomfortable-for instance, while engagi physical workout-while mentally cheerful; conversely, one may be mentally distraught while physical comfort. This immediately raises the issue of the mind/body relationship. The fact th compelling grounds for not simply equating mental and physical degrees of well-being implie affective dualism between the body and mind. Such dualism is explicitly accepted by Buddh were presented in this conference why this should be refuted by modern neuroscience.

Affective dualism may be included in the broader category of what may be deemed expe experiences of objective, physical phenomena are quite unlike our experiences of subjective An event like an apple dropping from a tree, or a thing like an apple itself, appears quite diffe event of losing hope, or the experience of confidence. Similarly, there are significant experie differences between objectively observing brain processes and subjectively observing menta former have specific locations and are composed of material entities that have shape, color, numerous other physical attributes; mental processes seem to lack those physical attributes qualities of their own that are not apparent in brain processes. The fact that Buddhist conten observed the mind for centuries yet formulated no theory of the brain implies that introspecti the mind does not necessarily shed any light on the brain. Likewise, the study of the brain al of all first-person accounts of mental states-does not necessarily yield any knowledge of me Thus, experiential dualism, which maintains that physical and mental phenomena experienti different, is accepted by Buddhism as well as by at least some of the scientists in this meetin

Experiential dualism also includes what may be called causal dualism, for the mind/body Hobson's words "is clearly open to interventions of two distinctive kinds. One is a biological i the other is a conceptual intervention." Lewis Judd concurs when he comments that there "is there may be a synergistic effect between psychopharmacology and specific forms of psych the combination of the two, the rate of relief for the clinically depressed is higher than if one medications alone. Likewise, Buddhism maintains that the mind is influenced by, and exerts upon, both mental and physical phenomena.

What shall we make of such mind/body dualisms, which are commonly accepted in Budd science? The Madhyamaka view, which the Dalai Lama endorses and which in Tibet is gene pinnacle of Buddhist philosophy, maintains that humans have an innate tendency to reify bo experience as well as ourselves as experiencing agents. According to this view, while it is us recognize the apparent differences between physical and mental events in the above ways,

error to conclude that nature itself-independently of our conceptual constructs-has created s
demarcation between physical and mental phenomena. Thus, the Madhyamaka view explici
substance dualism, which has been so roundly condemned by contemporary neuroscientists
proponents of the Madhyamaka view, declare that if the mind and body did each exist inhere
of conceptual designations-they could never interact. Thus, there is a deep incongruity betw
and reality: while mind and matter seem to be inherently different types of independently exi
such appearances are misleading; this becomes apparent only by an ontological analysis of
types of phenomena.13

The difficulty of providing any explanation for the causal interaction of the body and mind
are regarded as real, separate "things" has been clearly addressed in this conference, and i
reason why the great majority of neuroscientists have adopted a physicalist view of the minc
perspective, while this step eliminates the need for any causal mechanism relating a nonphy
brain, it has the disadvantage of shedding no light on the actual nature of consciousness or
Indeed, though modern neuroscience has discovered many elements of the brain and neura
necessary for the production of specific conscious processes, it has provided no cogent exp
nature of consciousness, nor does this discipline have any scientific means of detecting the
absence of consciousness in any organism whatsoever. Over the years since this meeting,
illuminating materialist explanation of consciousness than that offered here, namely that it is
natural condition of the activated brain. Nor have I heard anything more revealing concernin
consciousness than the statement that it is something that arises when there are enough ne
enough connections to support conscious activity. Such accounts actually explain nothing, a
be counted as scientific theories, for they do not lend themselves to either empirical verificat
refutation.

Not only do Madhyamikas reject the notion that the mind is an inherently existent substar
they similarly deny that physical phenomena as we experience and conceive of them are thi
rather, physical phenomena are said to exist in relation to our perceptions and conceptions.
is inescapably related to our perceptual modes of observation, and the ways in which we co
are inescapably related to our concepts and languages.

In denying the independent self-existence of all the phenomena that make up the world c
the Madhyamaka view departs from both the substance dualism of Descartes and the subst
physicalism-that is characteristic of modern science. The physicalism propounded by many
scientists seems to assert that the real world is composed of physical things-in-themselves,
phenomena are regarded as mere appearances, devoid of any reality in and of themselves.
difference between appearances and reality.

The Madhyamaka view also emphasizes the disparity between appearances and reality,
different way. All the mental and physical phenomena that we experience, it declares, appea
existed in and of themselves, utterly independent of our modes or perception and conceptio
inherently existing things, but in reality they exist as dependently related events. Their deper

threefold: (1) phenomena arise in dependence upon preceding causal influences, (2) they ex upon their own parts and/or attributes, and (3) the phenomena that make up the world of our dependent upon our verbal and conceptual designations of them.

This threefold dependence is not intuitively obvious, for it is concealed by the appearance as being self-sufficient and independent of conceptual designation. On the basis of these mi appearances it is quite natural to think of, or conceptually apprehend, phenomena as self-de themselves. This tendency is known as reification, and according to the Madhyamaka view, delusion that provides the basis for a host of mental afflictions. Reification decontextualizes. phenomena without regard to the causal nexus in which they arise, and without regard to the observation and conceptualization by which they are known. The Madhyamaka, or Centrist, it seeks to avoid the two extremes of reifying phenomena on the one hand, and of denying th the other.

In the Madhyamaka view, mental events are no more or less real than physical events. In common-sense experience, differences of kind do exist between physical and mental pheno commonly have mass, location, velocity, shape, size, and numerous other physical attribute generally characteristic of mental phenomena. For example, we do not commonly conceive affection for another person as having mass or location. These physical attributes are no mo other mental events such as sadness, a recalled image from one's childhood, the visual perc or consciousness of any sort. Mental phenomena are, therefore, not regarded as being phys reason that they lack many of the attributes that are uniquely characteristic of physical phen Buddhism has never adopted the physicalist principle that regards only physical things as re the First Noble Truth, both physical and mental suffering are to be recognized, but according view, neither exists as a thing-in-itself, and therefore the dualism between them is of a relativ absolute, nature.

The Reality of the Sources of Suffering

Just as Buddhism recognizes two types of suffering-mental and physical-so does it affirm the mental and physical causal influences that give rise to suffering. Physical injury, for example physical pain and it may also result in mental anguish. On the other hand, certain attitudes s arrogance, insecurity, craving, hostility, and jealousy may also result in mental distress, and impulses may also lead one into activities that produce physical pain as well. It is also appar physical illnesses and injuries do not necessarily result in mental distress- they do not do so whenever such physical events occur-and mental suffering may arise even in the absence o physical influences. For example, one may feel deeply distressed by not receiving a telepho someone. This is not to say that there are no neurophysiological correlates to such unhappi there are no brain events that may be necessary for the arising of unhappiness-but it is not e

those physical processes are the primary causes of one's distress. Indeed, Tibetan Buddhis
the mental states we experience as humans do have physiological correlates in the body, bu
the subjectively experienced mental states to purely objective, bodily states.

As the Dalai Lama has affirmed many times, if elements of Buddhist doctrine, including th
view, are compellingly refuted by new empirical evidence or cogent reasoning, then those B
be abandoned. Many neuroscientists today claim that mental processes are in fact nothing o
processes: all mental events are either identical to brain events or are solely produced by th
existence apart from them. This view is at variance with Buddhism, so if there are compellin
adopting it, Buddhist doctrine should be revised accordingly.

The ever-growing body of neuroscientific discoveries concerning the correspondence of s
processes to specific neural events can be reasonably interpreted in either of two ways. This
suggest that mental processes are identical to, or at least concomitant with, their correspond
processes. If this turns out to be the case, this could be regarded as evidence in support of t
view that the mind is simply a function of the brain, but this is certainly not the only logical co
that could be drawn from such evidence. Alternatively, such correspondences between men
processes might demonstrate that mental processes occur in dependence upon brain proce
causal relation between two sorts of phenomena, which leaves open the possibility that ther
causes-possibly of a non-physical, cognitive nature-that are necessary for the production of

Common-sense experience suggests that mental and physical events exert causal influe
It has long been known that physical stimuli from our environment and from our body influen
our thoughts, and feelings. And mental activity-including those same perceptions, thoughts,
influences the body. Buddhists take such causal interrelatedness at face value; neither phys
causal agency is discounted due to any speculative presuppositions. Buddhism regards sub
mental events as being nonphysical in the sense that they are not composed of particles of
physical events as being non-mental in the sense that they are not of the nature of cognition
limited kind of dualism, what kind of physical mechanism does it posit to account for the cau
between these two kinds of phenomena? This question presupposes that all causation requ
mechanisms, but this assumption has never been held by Buddhists.

It is not evident to me that contemporary physics refutes the limited dualist view propose
Madhyamaka view. Modern cosmology suggests that the physical world may have arisen fro
not composed of particles of matter and hence is not physical in the above Buddhist sense o
physicists now regard time, too, as being very like a dimension of space, and even energy it
necessarily a purely objective, material entity. While the principle of the conservation of ener
been posited by neuroscientists as a physical law that prohibits any non-material influences
world, Richard Feynman (himself an avowed physicalist) points out that this is a mathematic
not a description of a mechanism or anything concrete. He adds that in physics today we ha
what energy is,14 leaving open the possibility, as the Madhyamikas propose, that energy as
not something that exists purely objectively as an independent physical reality. Given the int

of mass and energy, this raises interesting questions concerning the ontological status of ma

The contemporary theoretical physicist Euan Squires explicitly claims that the conservati physics should not be posited as compelling grounds for refuting dualist hypotheses of mind Until the work of Newton, physicists believed that all forces were simply "push/pull" effects o bodies, but Newton's law of gravitation countered that the presence of an object at one plac the behavior of another at an arbitrarily large distance away, without any intervening mediun Thus, as Squires points out, "materialism" in its narrowest interpretation died in the seventee Similarly, until the late nineteenth century, most scientists viewed the world from the perspe mechanistic materialism, which required a material medium for the propagation of light. But mechanism also became obsolete when Maxwell mathematically demonstrated that no such Michelson and Morley empirically demonstrated the absence of any physical evidence for su the classical principle of mechanism died in the nineteenth century and was even more deep twentieth-century discoveries in the field of quantum mechanics.16 In the examples cited ab preconceptions have been dispelled by advances in knowledge, in the best spirit of scientific

To return to the Buddhist account of mind/body interactions, if mental and physical proce influence each other by means of some mechanism, how do they interact? Buddhism begins validity of our common-sense conclusion that mental and physical phenomena influence eac the scientists in this conference explicitly confirmed. This affirmation is made on the basis of straightforward, Buddhist definition of causality: A can be regarded as a cause of B if and on precedes B, and (2) were the occurrence of A to have been averted, the occurrence of B wo averted. Thus, this phenomenological theory of causality does not necessarily require mech

As the Dalai Lama pointed out, there is a simple, twofold classification of causality that ha bearing on the nature of consciousness. A may be a substantial cause of B, in which case it transforms into B, or A may be a cooperative cause of B, in which case it contributes to the but does not transform into it. Now if mental states are in fact nothing other than brain states is no problem in asserting that prior neurophysiological events transform into mental states, as their substantial causes. But to conclude with certainty that mental events are identical to correlates-or that those mental events are simply a function or state of the corresponding bra would have to be demonstrated empirically that the two occur simultaneously and not seque entail knowing the precise moment when a mental event takes place and the precise momen takes place, and ascertaining whether those two moments are simultaneous or sequential. T knowledge, this has not yet been done, and it is not clear to me how it could be done with su precision. If mental events are produced from prior neural events, the two cannot be identica it is valid to ask: Do physical processes act as substantial causes or as cooperative causes processes?

If physical events, in causing nonphysical mental events, were to transform into them, the those physical events would have to disappear in the process; this is a position rejected by B science alike, albeit for different reasons. Buddhism therefore proposes that physical proces

cooperative, but not substantial, causes for mental processes. In the meantime, physical eve
as substantial causes for subsequent physical events. But this raises the question: If preced
processes act only as cooperative causes for mental events, what, if anything, are the subst
mental events? If mental processes had no substantial causes, this would imply that they ar
Buddhism rejects this possibility, just as it rejects the notion that physical events can arise fr

The conclusion drawn by Buddhism is that prior mental events act as the substantial cau
mental events. At times, specific mental states enter a dormant state, as, for example, when
is withdrawn as one falls asleep. But the continuum of the mind is never annihilated, nor doe
from nothing.

The whole of Buddhism is concerned with identifying the nature and origins of suffering, a
exploring means to eliminate suffering from its source. Relying chiefly on contemplative and
inquiry, it is concerned chiefly with mental afflictions, as opposed to physical illness, and it h
more to the mental causes of distress than to physical causes. In its pursuit of understandin
causes of mental suffering, Buddhism has much to learn from modern neuroscience. There
to refute genetic influences, electrochemical imbalances in the brain, and other types of brai
contributing to mental dysfunctions, but in the face of such compelling evidence, a Buddhist
questions as: if two people are genetically prone to a certain type of mental disorder, why is
succumb to the disease and the other not? Likewise, two people may be subjected to very s
trauma, yet their psychological responses may be very different. To limit the pursuit of such
to physiological causation seems unjustified, regardless of one's metaphysical orientation. T
of a physical cause of a mental disorder does not preclude the possibility of important psych
also being involved. Thus, counseling someone to avoid or more successfully manage certa
circumstances that may lead to mental problems may be sound advice. However, Buddhism
identifying and healing the inner mental processes that make one vulnerable to such outer i
than trying to control or avoid outer circumstances, Buddhism recognizes that many difficult
circumstances are uncontrollable and at times unavoidable; therefore it focuses primarily on
malleability of the mind, especially in terms of making it less prone to afflictions regardless o
environment.

In short, Buddhism places a greater emphasis on controlling one's own mind rather than
one's environment. This may be why the Dalai Lama expressed such an interest in the rang
mental disorders as chronic depression, for Buddhism is concerned with counteracting the p
such disorders and not simply with treating their symptoms. For all the medical advances in
chronic depression, Lewis Judd candidly acknowledged that antidepressants do not "cure" t
"treat" or "manage" them as clinicians "try to remove the symptoms." This may be immensel
term, but for the long term, Buddhism stresses the importance of identifying the necessary a
causes of all kinds of mental disorders with the hope that they may be eliminated and the in
utterly healed.

Why is it that medical science so often confines itself to explanations involving physical c

so swiftly relegates other influences to the euphemistic category of "placebo effects" (bearin
placebo is defined as something that has no significant medical effects)? I suspect this is lar
fact that for the first three hundred years following the Scientific Revolution, there was no sc
mind in the West, and for the first hundred years in the development of psychology, the natu
causal efficacy of consciousness were widely ignored, with the brief exception of a few intros
as William James. As James commented, those phenomena to which we attend closely bec
we disregard are reduced to the status of imaginary, illusory appearances, equivalent finally
all.17 While the brain has become very real for scientists observing the objective, physical c
mental activity, with no comparable development of sophisticated techniques for exploring m
firsthand, such subjective phenomena as mental imagery, beliefs, emotions, and consciousn
widely regarded as mere illusory epiphenomena of the brain.

Buddhist contemplatives, on the other hand, have long ignored the brain's influence on th
therefore attribute little if any significance to it. But they have developed a wide array of intro
contemplative methods for training the attention, probing firsthand into the nature, origins, an
efficacy of mental events, including consciousness itself, and for transforming the mind in be
Centuries of experience derived from Buddhist practice suggest that the mind may be far mo
hold far greater potential than is now assumed by modern science. However, as the Dalai La
elsewhere, these claims are like paper money. If we are to attribute value to them, we must
that they are backed by valid experience. Only that is the gold standard behind the currency
claims.

Does modern cognitive science know enough about the brain and mind to safely conclud
of a nonphysical mind is useless? When asked what percentage of the functioning of the bra
understand, neuroscientist Robert Livingston replies, "Half of one percent," and Lewis Judd
have barely scratched the surface." Nevertheless, one may still hold to a physicalist view of
grounds that there is no scientific evidence for the existence of any nonphysical phenomena
hypothesis of a nonphysical mind should not be entertained even for a moment. This would
conclusion if science had developed instruments for detecting the presence of non-physical
instruments yielded negative results. However, to the best of my knowledge, no such instrun
developed. Thus, the statement that there is no scientific evidence for the existence of anyth
is unsubstantiated. If neuroscientists had a thorough understanding of all the necessary and
for the production of consciousness, and if all those causes turned out to be physical, then a
theories of the mind and brain would have to be rejected. But contemporary neuroscientists
very far from that goal.

It is pertinent to point out here that, strictly speaking, there is still no scientific evidence fo
existence of consciousness! Scientists know of its existence only because they are conscio
they infer on that nonscientific basis that other similar beings are conscious as well. But how
human being must another entity be to be deemed conscious? When it comes to the presen
consciousness in unborn human fetuses and in other animals there is no scientific consensu

reason that there is no scientific means of detecting the presence or absence of consciousn whatsoever. This accounts for the current lack of scientific knowledge concerning the nature causal efficacy of consciousness. With this in mind, we now turn to the topic of the cessation and the possibility of the cessation of consciousness itself.

The Reality of the Cessation of Suffering

Once the full range of suffering has been identified and its necessary and sufficient causes Buddhism asks: Is it possible to be forever freed from suffering and its sources? Many scien respond with a swift affirmative: when you die, all your experiences stop, for consciousness other words, the cessation of suffering occurs due to personal annihilation. While this is ofte scientific view, from a Buddhist perspective, the present state of neuroscientific ignorance co origins and nature of consciousness lends little credibility to any conclusions scientists may effect of biological death on consciousness.

Tibetan Buddhism asserts that during the process of dying, our normal sensory and conc become dormant. The end result of this process, when all our normal mental faculties have the cessation of consciousness, but rather the manifestation of very subtle consciousness, f other mental processes originate. The presence of this subtle consciousness, according to T not contingent upon the brain, nor does it entail a loss of consciousness. Rather, the experie consciousness is the experience of unmediated, primordial awareness, which is regarded as constituent of the natural world. When the connection between this subtle consciousness an severed, death occurs. But this consciousness does not vanish. On the contrary, from it tem "mental body," akin to the type of nonphysical body one may assume in a dream. Following experiences subsequent to one's death, this mental body also "perishes," and in the next mo life begins, for example in the womb of one's future mother. During the development of the f sensory and conceptual faculties are developed in reliance upon the formation of the body. consciousness is said to be present from the moment of conception.

What are the empirical grounds for this theory of metempsychosis, presented here only i highly trained Tibetan Buddhist contemplatives claim to be able to recall the events of their p the subsequent dreamlike experience, and the process of taking birth. In many cases they a events from their past lives, for the memories are stored, according to this theory, in the con mental consciousness that carries on from one life to another. Other people, too, may have recalling their past lives, as in the example the Dalai Lama gave of the two girls in India who recollected the names of people that they had known in previous lives. However, most peop their previous lives, according to Buddhism, for those experiences are eclipsed by the more of this life, just as most adults have few memories of their infancy in this life.

In this conference, the scientists' difficulty in understanding the Buddhist concept of subtl

consciousness may appear odd, for the notion of subtle physical phenomena is common in s
the electromagnetic field of a single electron is a subtle phenomenon, which can be detecte
sophisticated instruments. Likewise, the light from galaxies billions of light years away is ver
can be detected only with very powerful, refined telescopes. Similarly, Buddhism posits the e
subtle states of awareness and mental events that can be detected only with very sensitive,
attention. Ordinary consciousness is too unrefined and unstable to detect such phenomena,
devised numerous techniques for training the attention, unknown to modern science, so that
increasingly more subtle mental and physical phenomena.18 While subtle states of awarene
only with very refined awareness, even the grossest mental states, such as rage (which can
firsthand by an ordinary, untrained mind), cannot be directly detected with the physical instru
neuroscience: they detect only the neurophysiological correlates of such mental states and
physical behavior. Thus, all states of consciousness may be regarded as too subtle for mod
detect.

Whereas belief in an afterlife or the continuity of consciousness after death is often regar
optimistic act of faith in the West, Buddhism counters that the belief in the automatic, eterna
suffering at death due to the disappearance of consciousness is an optimistic act of faith, wi
empirical or rational grounds to support it. Buddhism does indeed propose that suffering, tog
source, can be radically, irreversibly dispelled, but this requires skillful, sustained refinement
and the elimination of the root cause of suffering-namely, ignorance and delusion-through th
contemplative insight and knowledge. The means for developing such insight are presented
to liberation.

The Reality of the Path to the Cessation of Suffering

According to Tibetan Buddhism, the fundamental root of suffering is a type of inborn ignoran
nature of one's own identity, one's own consciousness, and the world of which one is consci
claims that all but highly realized people are born with these, but they can be attenuated and
entirely. Specifically, under the influence of such inborn ignorance we grasp on the absolute
and other, which leads in turn to the reification of all manner of mental and physical phenom
the division of mental and physical itself. According to the Madhyamaka view, such ignorance
countered by realizing the manner in which all phenomena, including oneself, exist as deper
events as described earlier in this essay.

In addition to such inborn ignorance, human beings are subject to a second type of ment
known as speculative ignorance. No one is born with this kind of ignorance, rather it is acqui
false indoctrination and speculation. Buddhism maintains that as a result of adopting unfoun
presuppositions, we may become more confused than we would have been without receivin
whatsoever.

Thus, the proper task of Buddhist training is not to indoctrinate people into a given creed philosophical tenets. Rather, it is to challenge people to examine and re-examine their own assumptions about the nature of reality. By repeatedly putting our presuppositions to the tes examination by way of careful observation and clear reasoning, we empower ourselves to di our own speculative confusion. Once this is cleared away, we are in a much more effective and vanquish the underlying, inborn ignorance and its resultant mental afflictions. In Buddhis and spiritual maturation may be measured in direct relation to one's success in overcoming mental afflictions.

With this twofold classification of ignorance in mind, let us examine the interface betwee modern science in terms of two quite disparate ways of confronting reality. One is by means ideology and the other is by pursuing scientific inquiry. The eminent anthropologist Clifford G in this regard, "Science names the structure of situations in such a way that the attitude cont them is one of disinterestedness.... But ideology names the structure of situations in such a attitude contained toward them is one of commitment."19 Geertz regards religious belief as example of an ideology, and he remarks that this involves a prior acceptance of authority wh experience. In short, with respect to any ideology, one who would know must first believe.

The problem of adopting an ideology arises when there is a discrepancy between what is can be established by compelling evidence. But what constitutes compelling evidence and fo who are committed to physicalism are extremely skeptical of any evidence that is incompatib As Allan Hobson comments, their minds must be open about such evidence, but that openin the other hand, Tibetan Buddhists who are committed to the theory of metempsychosis are neuroscientific claims that the mind is simply an epiphenomenon or function of the brain. Th neuroscientific evidence presented to them, physicalists find compelling evidence for refutin existence of the mind, whereas traditional Tibetan Buddhists and other nonmaterialists do n

Most scientists would acknowledge that they do not know that consciousness is nothing function of the brain, and most Buddhists, I believe, would acknowledge they do not know th something more than a function of the brain. And yet convictions run strong in both ways, in sides are committed to disparate ideologies. If this is true, then scientists, together with Bud equally prone to ideologies-or to use Robert Livingston's term, "speculative suppositions." W of science is largely an account of disabusing ourselves of mistaken speculative supposition Livingston points out, Buddhism also places a high priority on dispelling such ignorance in o the deeper, inborn ignorance that lies at the root of suffering.

Perhaps in order to explore this commonality, the Dalai Lama cited a threefold classificat phenomena that is made in Buddhism. The first of these categories includes phenomena tha apprehended, or empirically demonstrated. The second includes those that are known by lo not directly. The third includes those that are accepted simply on the basis of someone else' authority. He hastened to add that these are not qualities inherent to different types of phen they are related to the limitations of our own knowledge. An event that is known to one pers

basis of someone else's testimony may be inferentially known by a second person; the same directly by a third person. Everyone agreed that it is the task of science to reduce the numbe in the third category, and to move as many phenomena as possible from the second to the f in fact, is the goal of Buddhism as well.

Since it is widely regarded in the West simply as a religion, Buddhist doctrine is still widel as an ideology, in contrast to scientific knowledge. Indeed, many Buddhists do uncritically ac of their faith simply as a creed, without subjecting it to either empirical or rational analysis. Ic are commonly based not on immediate experience or on cogent, logical analysis, but on the else, such as the Buddha, whom one takes to be an authority. If the words of the Buddha ar authoritative, then the basis for this ideology vanishes into thin air. Even though many Buddl Buddhist doctrine in this way, the Buddha admonished his followers: "Monks, just as the wis testing it by heating, cutting, and rubbing it, so are my words to be accepted after examining out of respect [for me]."20 Thus, unquestioning commitment to an ideology is not only unnec it was explicitly condemned by the Buddha himself!.

While scientific knowledge is commonly equated with empirical discoveries, with an ever reliance upon inference and others' testimony, I believe even a cursory examination of the h demonstrates that this view is far from accurate. With the enormous specialization among th vast amount of research that has been conducted throughout history and throughout the wo individual can hope to empirically confirm the findings of the rest of the scientific community. empirical scientific research relies upon the sophisticated tools of technology, and few scien time or inclination to check the engineering of every instrument they use. For scientific know progress, scientists must rely increasingly on the claims of their scientific and engineering co the past and present. In most cases, I believe, that trust is well earned, but in most cases tha reliance upon others' authority, not upon one's own observations or rigorous logic. As this is scientific community, it is all the more true for the public at large, which provides the funding scientific research-people regard scientists as authorities in their respective fields and accep on the basis of such trust. This trust is warranted by the belief that if one were to engage in t scientific training and perform a specific type of research for oneself, one could, in principle, other's findings empirically or at least by logical analysis. It is with this same kind of trust tha contemplatives receive formal training in Buddhism and try to put to the test the Buddha's ov discoveries about the nature of suffering, the source of suffering, its cessation, and the path cessation.

Buddhist inquiry into the above three types of phenomena proceeds by way of four princi which the Dalai Lama referred only briefly in this meeting.21 To expand briefly on his comme principle of dependence refers to the dependence of compounded phenomena upon their ca dependence of visual perception upon the optic nerve. It also pertains to the dependence of phenomenon upon its own parts and attributes, or upon other entities, as in the interdepende "down" and "parent" and "child." The principle of efficacy pertains to the causal efficacy of sp

phenomena, such as the capacity of a kernel of corn to produce a stalk of corn. The principl
consists of three means by which one establishes the existence of anything: namely, direct p
inference, and knowledge based upon testimony, which correspond to the above threefold e
explicitly not ontological-classification of phenomena. The principle of reality refers to the na
phenomena that is present in their individuating and generic properties. An individuating pro
for instance, is heat, and one of its generic properties is that it is impermanent. The Dalai La
examples of this principle the fact that the body is composed of particles of matter and the fa
consciousness is simply of the nature of luminosity and cognizance. These facts are simply
face value: they are not explained by investigating the causes of the body and mind or their
efficacy.

Let us apply these four principles to the materialist understanding of consciousness. Acc
view, consciousness is simply a natural condition of the activated brain, much as heat is a n
of fire (the principle of reality). As such, consciousness vanishes as soon as the brain is no l
(the principle of dependence), and it has no causal efficacy of its own apart from the brain (t
efficacy). These conclusions are based on the direct observations of neuroscientists investig
correlates; they are inferred by philosophers who know of such correlates; and they are acc
many people who accept scientific materialism without knowing for themselves its supportin
logical arguments (the principle of valid proof).

According to the Buddhist view, in contrast, consciousness is simply of the nature of lumi
cognizance, much as fire is of the nature of heat (the principle of reality). Specific states of c
arise in dependence upon the sense organs, sensory objects, and prior, nonphysical states
(the principle of dependence); and they, in turn, exert influences on subsequent mental and
including indirect influences on the outside physical world (principle of efficacy). These conc
purportedly based on the direct observations of contemplatives who have thoroughly fathom
consciousness; they are inferred by philosophers on the basis of others' experiences; and th
fact by many Buddhists who accept Buddhist doctrine without knowing for themselves its su
facts or logical arguments (the principle of valid proof).

In evaluating these two radically different ways of understanding consciousness, the cen
arises: which people are deemed to be authorities on consciousness due to their privileged,
Modern Westerners may look with deep skepticism upon anyone claiming to be an authority
accomplished neuroscientist. Traditional Tibetan Buddhists, on the other hand, may look wit
upon anyone claiming to be an authority on consciousness who has not accomplished adva
meditative concentration by which to explore the nature of the mind introspectively. By what
judge who is and who is not an authority who can provide reliable testimony? In other words
observations are to be deemed trustworthy? I strongly suspect that answers to these questi
role of ideology, and perhaps it will turn out to be true that one who would know-either throu
on the basis of authoritative testimony-must first believe. These questions certainly deserve
in much greater detail, especially in the context of such cross-cultural dialogue.

Before closing, I would like to raise one final issue that is central to Buddhism and to the himself, and that is compassion. As the Dalai Lama has commented many times, philosophi theories vary from culture to culture, and scientific theories are subject to change over time, importance of love and compassion is a constant throughout human history. The Tibetan Bu liberation and spiritual awakening likewise places an equal emphasis on the cultivation of ins compassion. Indeed, the experiential knowledge sought in Buddhism is said to support and compassion, and any view that undermines compassion is viewed with extreme skepticism.

It was perhaps with this in mind that at one point in this conference the Dalai Lama asked participants whether they- who asserted the identity of the mind (and implicitly the person) w brain-could feel affection for a brain. The general response among the neuroscientists was p expressed by Antonio Damasio: "What I can feel affection for is a particular individual, a pers know.... I don't feel any affection whatsoever [for brains]." Lewis Judd commented in a simila physician is dedicating his or her knowledge and skills on behalf of the patient as a totality, a not to some fractional part or organ system.... The patient is not just a diseased liver or disea whatever. The patient is an integrated, whole person." But where is this "particular individua person" to be found? According to physicalism, is this anything more than a baseless illusion doesn't this ideology critically undermine love and compassion?

According to the Madhyamaka view, a person cannot be identified with the mind alone or the rest of the body. But no individual can be found under analysis apart from the body and "I," or self, can be found under such ontological scrutiny, so Madhyamikas conclude, like ma today, that the self does not exist objectively or inherently, independently of conceptual desi However, the Madhyamikas add that while none of us exist as independent things, we do ex interrelationship with each other. Thus, we do not exist in alienation from other sentient bein surrounding environment; rather, we exist in profound interdependence, and this realization far deeper sense of love and compassion than that which is conjoined with a reified sense o separateness and autonomy.

Whatever fresh insights may be arise from the collaboration of Buddhists and neuroscien hope that these may lead us to become more and more "warm-hearted persons." I would lik essay with the Dalai Lama's own concluding words: "Whether compassion has an independ self or not, compassion certainly is, in daily life, I think, the foundation of human hope, the so assurance of our human future."

Appendix -- About the Mind and Life Institute

The Mind and Life dialogues between His Holiness the Dalai Lama and Western scientists w through a collaboration between R. Adam Engle, a North American businessman, and Dr. F Chilean-born neuroscientist living and working in Paris. In 1983, both men independently ha

create a series of cross-cultural meetings between His Holiness and Western scientists.

Engle, a Buddhist practitioner since 1974, had become aware of His Holiness' long-stanc interest in science, and his desire to both deepen his understanding of Western science, anc understanding of Eastern contemplative science with Westerners. In 1983 Engle began worl in the autumn of 1984, Engle and Michael Sautman met with His Holiness's youngest brothe (Ngari Rinpoche), in Los Angeles and presented their plan to create a week-long cross-cultu meeting. Rinpoche graciously offered to take the matter up with His Holiness. Within days, F that His Holiness would very much like to participate in such a discussion, and authorized pl meeting.

Varela, also a Buddhist practitioner since 1974, had met His Holiness at an international 1983, the Alpbach Symposia on Consciousness. Their communication was immediate. His H interested in science but had little opportunity for discussion with brain scientists who had sc understanding of Tibetan Buddhism. This encounter led to a series of informal discussions c years; through these conversations, His Holiness expressed the desire to have more extens mutual discussion and inquiry.

In the spring of 1985, Dr. Joan Halifax, then the director of the Ojai Foundation, and a frie Varela, became aware that Engle and Sautman were moving forward with their meeting plar on Varelas behalf and suggested that they all work together to organize the first meeting col four gathered at the Ojai Foundation in October of 1985 and agreed to go forward jointly. Th focus on the scientific disciplines that address mind and life, since these disciplines might pr fruitful interface with the Buddhist tradition. That insight provided the name of the project, an of the Mind and Life Institute itself.

It took two more years of work and communication with the Private Office of His Holiness meeting was held in Dharamsala in October 1987. During this time, the organizers collabora a useful structure for the meeting. Varela, acting as scientific coordinator, was primarily resp the scientific content of the meeting, issuing invitations to scientists, and editing of a volume transcripts of the meeting. Engle, acting as general coordinator, was responsible for fundrais with His Holiness and his office, and all other aspects of the project. This division of respons between general and scientific coordinators has been part of the organizational strategy for meetings. While Dr. Varela has not been the scientific coordinator of all of the meetings, he guiding force in the Mind and Life Institute, which was formally incorporated in 1990 with En Chairman.

A word is in order here concerning these conferences' unique character. The bridges tha enrich traditional Buddhist thought and modern life-science are notoriously difficult to build. V first taste of these difficulties while helping to establish a science program at Naropa Institut arts institution created by Tibetan meditation master Chogyam Trungpa as a meeting groun traditions and contemplative studies. In 1979 the program received a grant from the Sloan F organize what was probably the very first conference of its kind: "Comparative Approaches t

Western and Buddhist." Some twenty-five academics from prominent North American institu
disciplines included mainstream philosophy, cognitive science (neurosciences, experimenta
linguistics, artificial intelligence) and, of course, Buddhist studies. The gatherings difficulties
a hard lesson on the organizational care and finesse that a successful cross-cultural dialogu

Thus in 1987, wishing to avoid some of the pitfalls encountered during the Naropa experi
operating principles were adopted that have contributed significantly to the success of the M
series. These include: choosing open-minded and competent scientists who ideally have so
Buddhism; creating fully participatory meetings where His Holiness is briefed on general sci
from a nonpartisan perspective before discussion is opened; employing gifted translators lik
Jinpa, Dr. Alan Wallace, and Dr. Jose Cabezon, who are comfortable with scientific vocabul
and English; and finally creating a private, protected space where relaxed and spontaneous
proceed away from the Western media's watchful eye.

The first Mind and Life Conference took place in October of 1987 in Dharamsala. The co
the basic groundwork of modern cognitive science, the most natural starting point for a dialo
Buddhist tradition and modern science. The curriculum for the first conference introduced br
cognitive science, including scientific method, neurobiology, cognitive psychology, artificial i
brain development, and evolution. In attendance were Jeremy Hayward (physics and philos
Robert Livingston (neuroscience and medicine), Eleonor Rosch (cognitive science), and Ne
(computer science). At the concluding session, the Dalai Lama asked that the dialogue cont
conferences. Mind and Life I was published as Gentle Bridges: Conversations with the Dala
Sciences of Mind, edited by Jeremy Hayward and Francisco Varela (Boston: Shambhala Pu
volume has been translated into French, Spanish, Portuguese, German, Japanese, Chinese

Following Mind and Life II (the subject of the present volume), Mind and Life III was held
in 1990. Daniel Goleman (psychology) served as the scientific coordinator. He chose to focu
relationship between emotions and health. Participants included Dan Brown (experimental p
Kabat-Zinn (medicine), Clifford Saron (neuroscience), Lee Yearly (philosophy), and Francisc
(immunology and neuroscience). Mind and Life III was published as Healing Emotions: Con
Dalai Lama on Mindfulness, Emotions, and Health, edited by Daniel Goleman (Boston: Sha
1997). That volume has been translated into French, Spanish, Portuguese, German, Japane
Italian, and Polish.

During Mind and Life III a new mode of exploration emerged: participants initiated a rese
investigate the neurobiological effects of meditation on long-term mediators. To facilitate su
Mind and Life network was created to connect other scientists interested in both Eastern co
experience and Western science. With seed money from the Hershey Family Foundation, th
Institute was born. The Fetzer Institute funded two years of network expenses and the initia
research project. Research continues on various topics such as attention and emotional res

The fourth Mind and Life Conference met in Dharamsala in October 1992, with Francisc
as scientific coordinator. The dialogue focused on the areas of sleep, dreams, and the proce

Participants were Charles Taylor (philosophy), Jerome Engel (medicine), Joan Halifax (anth
dying), Jayne Gackenbach (psychology of lucid dreaming), and Joyce McDougall (psychoan
this conference is now available as Sleeping, Dreaming and Dying: An Exploration of Consc
Dalai Lama, edited by Francisco J. Varela (Boston: Wisdom Publications, 1997). That volum
into French, Spanish, German, Japanese, and Chinese.

Mind and Life V was held again in Dharamsala in October 1994. The topic was altruism,
compassion, with Richard Davidson as the scientific coordinator. In addition to Dr. Davidson
included Nancy Eisenberg (child development), Robert Frank (altruism in economics), Anne
of science), Elliott Sober (philosophy), and Ervin Staub (psychology and group behavior). Th
this meeting, Science and Compassion, will be published by the Oxford University Press in

Mind and Life VI opened a new area of exploration beyond the previous focus on life scie
took place in Dharamsala in October, with Arthur Zajonc as the scientific coordinator. This c
on the new physics and cosmology. The participants, in addition to Dr. Zajonc, were David F
(physics), George Greenstein (astronomy), Piet Hut (astrophysics), Tu Weiming (philosophy
Zeilinger (quantum physics). The volume covering this meeting is in preparation.

The dialog on quantum physics was continued at a smaller meeting held at Anton Zeiling
at the Institut fur Experimentalphysic in Innsbruck, Austria in June 1998. Present were His H
Zeilinger and Zajonc, and interpreters Wallace and Jinpa. That meeting was written up in the
January 1999 issue of GEO magazine of Germany.

In March 2000, the next meeting will be held in Dharamsala, with Daniel Goleman as scie
coordinator. The discussion will return to cognitive sciences, with a focus on destructive emo

Acknowledgments

Over the years, the Mind and Life Conferences have been supported by the generosity of se
organizations.

Barry and Connie Hershey of the Hershey Family Foundation have been our most loyal a
since 1990. Not only has their generous support guaranteed the continuity of the conference
breathed life into the Mind and Life Institute itself.

The Institute has also received generous financial support from the Fetzer Institute, The
Foundation, Mr. Branco Weiss, Adam Engle, Michael Sautman, Mr. and Mrs. R. Thomas No
Austin, and Mr. Dennis Perlman. On behalf of His Holiness the Dalai Lama and all the other
the years, we humbly thank all of these individuals and organizations. Your generosity has h
impact on the lives of many people.

We would also like to thank a number of people for their assistance in making the work o
itself a success. Many of these people have assisted the Institute since its inception. We tha
acknowledge His Holiness the Dalai Lama; Tenzin Geyche Tethong and the other wonderfu

Office of His Holiness; Ngari Rinpoche and Rinchen Khandro, together with the staff of Kash
the scientists, participants, scientific coordinators, and interpreters; Maazda Travel in the Un
and Middle Path Travel in India; Pier Luigi Luisi; Elaine Jackson; Zara Houshmand; Alan Ke
Pat Rockland; Thubten Chodron; Laurel Chiten; Shambhala Publications; Wisdom Publicatio
Publications.

The Mind and Life Institute was created in 1990 as a 501 (c) 3 public charity to support th
Life dialogues and to promote cross-cultural scientific research and understanding.

GNU GENERAL PUBLIC LICENSE
Version 2, June 1991

Copyright (C) 1989, 1991 Free Software Foundation, Inc.
675 Mass Ave, Cambridge, MA 02139, USA
Everyone is permitted to copy and distribute verbatim copies
of this license document, but changing it is not allowed.

Preamble

The licenses for most software are designed to take away your freedom to share and change it. By contrast, the GNU General Public License is intended to guarantee your freedom to share and change free software--to make sure the software is free for all its users. This General Public License applies to most of the Free Software Foundation's software and to any other program whose authors commit to using it. (Some other Free Software Foundation software is covered by the GNU Library General Public License instead.) You can apply it to your programs, too.

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish), that you receive source code or can get it if you want it, that you can change the software or use pieces of it in new free programs; and that you know you can do these things.

To protect your rights, we need to make restrictions that forbid anyone to deny you these rights or to ask you to surrender the rights. These restrictions translate to certain responsibilities for you if you distribute copies of the software, or if you modify it.

For example, if you distribute copies of such a program, whether gratis or for a fee, you must give the recipients all the rights that you have. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights.

We protect your rights with two steps: (1) copyright the software, and (2) offer you this license which gives you legal permission to copy, distribute and/or modify the software.

Also, for each author's protection and ours, we want to make certain that everyone understands that there is no warranty for this free software. If the software is modified by someone else and passed on, we want its recipients to know that what they have is not the original, so that any problems introduced by others will not reflect on the original authors' reputations.

Finally, any free program is threatened constantly by software patents. We wish to avoid the danger that redistributors of a free program will individually obtain patent licenses, in effect making the program proprietary. To prevent this, we have made it clear that any patent must be licensed for everyone's free use or not licensed at all.

The precise terms and conditions for copying, distribution and modification follow.

GNU GENERAL PUBLIC LICENSE
TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License applies to any program or other work which contains a notice placed by the copyright holder saying it may be distributed under the terms of this General Public License. The "Program", below, refers to any such program or work, and a "work based on the Program" means either the Program or any derivative work under copyright law: that is to say, a work containing the Program or a portion of it, either verbatim or with modifications and/or translated into another language. (Hereinafter, translation is included without limitation in the term "modification".) Each licensee is addressed as "you".

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running the Program is not restricted, and the output from the Program is covered only if its contents constitute a work based on the Program (independent of having been made by running the Program).

Whether that is true depends on what the Program does.

1. You may copy and distribute verbatim copies of the Pr

For Free Distribution only. Not for sale.

Not for distribution on the internet without permission.

Country House Ch. 01 (Saya lives fantasy with ex-boyfriend & a stranger)
byenslvd©

Story & drawings are the creation & copyright of the author. All rights reserved.

Saya’s most wild fantasy came true when her ex boy friend called to ask for a favor. They de
bar for a drink and discussed a lot. The discussion came to their sexual fantasies and talked
have while they were together.

Saya told him that always fantasized about having sex with two men but always afraid to ma
true. Steve told her that he could arrange something with one of his friends at his country ho
weekend. Saya couldn’t believe that agreed to that even if the thought made her very wet ar
before.

She took care of her underwear and clothes very carefully, felt very sexy and ready for the a
lace stockings and high heels.

It was evening when they arrived at the country house; Steve’s friend Mike was waiting watc
video. When he first shows Saya felt that this would be his lucky night.

Button by button both men undid her blouse revealing a wonderful pair of tits begging to be
restraining bra, and very quickly they were released and they were a sight to behold.

"Right guys now its up to you two to decide who gets me first," said Saya as she laid on the
her legs wide ready for the onslaught that was to come. The two men had different opinion,
taste the beautiful woman with all means, and they couldn’t wait a single second.

“Girl, I'm going to fuck you like you've never been fucked before." Steve said. Saya found th
imagine that her ex boyfriend could ever be violent.

Steve placed his hands on Saya's shoulders pushing her down onto the floor. Then he pulle
cock. Her eyes closed and her mouth opened. The head of Steve's cock pushed between he
sucking and licking his massive tool.

"Oh fuck, honey. What a hot little mouth you got."

He proceeded to fuck her face. His cock was quite thick. The corners of her mouth stretched

At the same time Mike reached behind and grabbed for Saya's breasts. With one of her tits i
her nipples between two fingers and began squeezing. He wasn't being gentle about it eithe
nipples firmly between his fingers and was pinching them hard with just about all his might s
pain through her.

After Saya sucked Steve’s cock for awhile, he picked her up and pressed her against the wa
standing up. His thick dick impaling her and the wall giving her back burns as he pumped he
pussy. He grunted & moaned with pleasure as he drilled her. Saya gasped & moaned too &
own excitement.

"Turn around," he ordered.

"Why?"

"Your are going to take it up the ass."

"Ohhh, No..."

He guided the tip of his cock to the entrance of Saya's asshole, then shoved it right in. Saya
body heaved upward at the sudden pain. Steve started pumping his cock into her faster and
her harder with every thrust.

"Please.." Saya screamed. Her tightly closed anus began stretching. He was splitting her as
huge cockhead in. He pushed more with force. She screamed, "Noooooo...."

He proceeded to slide it into Saya's ass and bury the full length of his cock all the way inside

Fuckkkkkk!!!..."

"Ohhh...fuckkkk!!!..."

Saya began to moan every time he pumped himself into her. She was beginning to like, it wa
thought it would be. Steve started to grind his cock into her with a circular motion and lifting
until her feet kept getting off the ground. Saya was moaning much more and louder now, sh
an orgasm.

Suddenly Steve stopped the ass fucking and started to spank her!

Saya screamed out and said, “STOP IT! You’re hurting me!”

“You haven’t seen hurt yet. The more you scream and squirm, the harder I’m going to spank
her bare ass much harder than he had been. SMACK! SLAP! SMACK! SMACK! SLAP! SMA

She cried out, “Please stop! Pleeeeease! It HURTS!” He kept on. SMACK! SMACK! SMACK

Her ass was on fire now. The pain was so intense she thought she’d pass out. Then sudden
spanking her

“What? She said between sobs.

The rough hands of the two men gripped her underarms, holding her immobile between ther
sides of her naked breasts Steve grabbed her head and began forcing her mouth harder ont
lipstick she had put on only an hour earlier was a mere memory now, the large dick fucking
cause, and she wouldn't have it any other way.

Saya opens her lips and slides along the shaft to the point of the pubic hair and then mounts
consumes the entire length to the point where she has to open her throat to take the head a
vocal chords and begins to try and hum sliding up and down. Steve grabbed her head holdi
her face. She did not cheat using her hand she continued to suck lick and build his cock up
orgasm which he felt building in his balls she looks forward to spewing his cum in the back c

Saya’s cheek were burning red her mouth filled with pre-cum, she was so wet in her pussy,
time and time again, tasting him in her mouth, she moaned as she looked up at him. He told

"I'm going to shoot my load all over your face and in your mouth"

Saya moaned in response to that and lusciously closed her eyes while looking at him.

He took his member out of her mouth and started jacking it off, she looked at him with her m
slapped her a couple of times with his cock, and told her:

"Are you ready for this load slut? are you ready to receive it all?"

"Yes give it to me, give it all to me all over my face"

"Here it goes"

"Mmmmmm"

She continued licking and sucking all round the bell end then the shaft and his balls, finally t
cock in and sucking hard until he shot his load deep into her throat, then pulling out and sho
load over her lips and face.

At the same Mike was fucking her hard right to the hilt, stretching her cunt wide with his larg
her completely. He rode her steadily & hard, slamming into the back of her pussy each time
pain, still sucking the last drops of cum from Steve's dick.

“Did I mention her cunt, did I, you okay if we do your ass now Saya?" said Mike not waiting f
turned her over and with the same aplomb slipped his cock into her ass and once again star

"Unnnggghhhhh..." she groaned, the tight ring stinging and burning as it stretched against h
thought of what was happening causing her pussy to leak and throb. "Noooo, please...."

She felt his cock filling her ass as his hands pressed on her back. She started moving her as
in as he pumps harder, filling her over and over. She felt his balls as they slap her pussy. He
to burn again as he continues to fuck her ass harder.

"Hold your head up, dear," she heard Steve tell her. "So that I can see you." She knew what
was: ass cheeks and pussy lips gaping open from behind, bare tits standing out proudly in fr
and hard. She knew that Steve was ready again to go on with her once more.

Mike pushed forward filling her ass with cock, as she turned back Steve’s cock was offered a
The sensation of both cocks was almost more than she could bear. Taking a deep breath, M
the depths of her ass and slowly, inch by inch he pushed in.

He buried his cock in her as deeply as possible, impaling her, she squealing in pain and plea
burning and cramping as his cock expanded and he withdrew a few inches then thrust in aga
entire body. She whimpered and cried as he began to increase the tempo and depth of the t
his outward tug dragged the protesting ring out, then disappeared in as he pushed into her,
tremendous his cock looked as it invaded this little, tiny hole of hers.

When his hips were up against hers again he pulled out a little, then pushed in, repeated, an
hips against hers. Her tears were staining in front of her but when he just stopped moving an
there the pain diminished rapidly. She began to feel full and exited at the same time and wh

halfway out, her asshole stretching towards him, not wanting to give up it's prize and then pu
started feeling some pleasure from it.

He felt himself growing between her ass cheeks, and squeezed her breast more forcefully.

Ohhhh.. ohh... " Saya lamented as Mike lasted longer than Steve. After about ten minutes, M
came. She thought his constant issue of load of cum would never stop. When he took his dic
her ass felt like it was on fire.

Then Steve with his cock hard like a rock again started his turn. Another enormous cock alm
wiggled it's way into her still resisting asshole. Saya felt it's head pop into her asshole & mak
deep into her. She let out another wail again as she begged him to stop but he commenced
shoving his dick in even further & rhythmically worked a fast, hard pace. And Steve did fucke
time, brutally and without any hesitation.

“I just always wanted to use you like a SLUT!”

Steve rammed her and filled her ass with meat as she screamed and screamed. He began p
pushing apart her insides, her head spun. Every move of his hips in any direction translated
into her ass. There was no chance for the slightest relief as he leaned into her again, his coc
easily, deeply. He was as hard as a steel pole and Saya was being used like she had never
wildest dreams.

Steve groaned in satisfaction as she screamed, her ass tightening around his shaft.

Saya thought that she could barely stand nor could she sit on her sore ass.
